Yet in matters of taste, if not of modesty, the progress of time has effected some change. A speech by Cicero to-day would still not ignore the speaker, but its self-praise would not be quite so direct and open-hearted. Boasting is no longer what Montaigne calls 'an inconsiderate affection with which we flatter ourselves.' The restraint upon it by ceremony of which he complains still prevails. 'We are nothing but ceremony: ceremony carries us away, and we leave the substance of things: we hold by the branches and quit the trunk. Ceremony forbids us to do things that are lawful and natural, and we obey it: reason forbids us to do things unlawful and ill, and nobody obeys it. I find myself here fettered by the laws of ceremony; for it neither permits a man to speak well of himself nor ill.' As he proposes to speak of himself, in spite of ceremony, he says, 'We will leave her here for this time.' And with that view of the case many still agree, whensoever they find it expedient to be their own trumpeter. Self-praise may be no honour, but it may be great profit, if effectively done. Many will agree with Tristram Shandy that it is a very unpleasant thing to have to praise oneself, but it is better than doing a good deed and getting no praise for it at all. As the Assyrian added Ashshur to his name and then was free to boast of his prowess as he chose, so the modern adds '& Co.,' after which it is quite correct to proclaim his integrity, his possessions, his pre-eminence in his own department of things above all his fellow-mortals. And the same is sometimes true when, in partnership, he vends his wisdom or his religion. This boasting in company and boasting in the name of Ashshur are less different than might at first be supposed. Ashshur was the tribal god, and tribal boasting in every age has had special licence and esteem. The predatory instinct, or at least the instinct of self-defence, showing itself in the sense that, if other people brandish their weapons, we must do it still better, is manifest in both. With this may be taken the most extended and calamitous of all modern forms of boasting—social rivalry. It is the supreme attempt to gain the kingdom of heaven by commercial boasting in partnership, the usual result being, as Peabody expresses it, to supply 'the soil in which the malaria of domestic infelicity most easily spreads' (*Jesus Christ and the Social Question*, 1901, p. 178 f.).

2. **Psychological.**—Boasting, being an exaggerating and placarding of one's own worth, is a very simple outcome of vainglory. Nevertheless, the vainglory does not always work in the same way, and is by no means always the same psychological phenomenon. Shakespeare has put two finished braggarts into Henry IV.,—Falstaff and Glendower,—but, except in the mere fact that both boast loudly, they have no real kinship even in their boasting. Falstaff's boasts are 'like the father that begets them: gross as a mountain, open, palpable.' Partly his boasting is the habit of a loud, ungirt nature, disguising its consciousness of unworth by inflated self-praise, and partly it is sheer love of the art of exaggeration and decoration. When he describes himself in the character of the ideal counsellor as 'a goodly portly man i' faith,' he is not greatly disturbed or perhaps astonished to have it turned into 'a devil haunts thee in the likeness of an old fat man.' Glendower, on the other hand, takes himself with utter seriousness:

'These signs have marked me extraordinary,
And all the courses of my life do show
I am not in the roll of common men.'

Falstaff delights to blow his own trumpet, not out of any respect for himself, but because he is on the

easiest terms with himself. Glendower's ego, on the other hand, lives in state, and suffers no familiarities even with himself. His boasting, therefore, is not so much an enjoyment as a duty. This difference in boasting shows that we are no more all on the same terms with ourselves than we are with other people, which separation of ourselves from ourselves, even in the very act of sounding our own praise, deserves more consideration than psychology has yet given it.

Another psychological difference indicated by Falstaff and Glendower is that some men turn in upon themselves to boast, while others go as far afield as possible. Glendower illustrates the former. Nothing interests him which does not touch himself directly, and a thing is great simply because it is his. He is the sort of person who in modern life thinks that what he does not know is not knowledge. Falstaff, on the other hand, is ready to associate himself with anything with which he can invent the most shadowy association. While Glendower sheds his glory upon the outward world, Falstaff is ready to shed all the glory of the outward world upon himself. Here, then, are two amazing qualities in human nature —one the power to boast without requiring anything but ourselves to boast about, and the other the power to drag everything into some relation to ourselves which will glorify us. Prof. James (*Psychology*, i. 329) puts vainglory in the middle of the manifestations of social self-estimation which belong to the empirical self. That is to say, it has to do with the 'fame which in broad rumour lies,' and with the self which has things and does things, and transacts its business in the eyes of men. The phenomenon of boasting reminds us how this ego can withdraw itself or expand itself, —how it can be all the circumference or the mere centre. A man may scorn all worthy things, and boast in the rest simply because they are his; or he may, though the puniest citizen, feel himself embodied in the skill and daring of his general. The person who claimed an interest in Germany because his cousin played the German concertina is scarcely an exaggeration of what goes on in sober earnest every day. Both types of boasting are caricatures of the genuine power of the ego, of that which ought to create in us wonder and reverence —its presence in all experience, its possession of all experience, its power to isolate itself from what does not interest it, its value to itself above all it possesses and knows. Boasting is only a misuse and perversion of the true greatness and range of the soul. Egotism, after all, must not be neglected when we study the ego. Hume complains that he never can catch himself without a perception (*Treatise on Human Nature*, ed. Green and Grose, vol. i. p. 534); he never, that is, can catch himself unoccupied and alone. Had he attended to the inflating of all experience in the might of the ego, he might have discovered the still more wonderful fact that he never could catch a perception without himself, and he might have been led to see, as Kant did, that it manifests itself to us by a more direct interest than if it allowed itself to be seen keeping house at home and quite solitary.

Finally, boasting is a phenomenon which sheds light on the relation of our personality to other personalities. It is a curiously mixed relationship. Every boaster would shrivel if he did not think his boast woke some response in the minds of other people. He will boast of anything if only he thinks some one will admire him for it. Moreover, it shows a curious trust that minds around him are like his own, and yet that they are not like. If the boaster thought others quite like himself, he would not expect them to be interested in him, but in themselves; yet, being prepossessed by himself, he is unable to allow for this change of perspective. Thus boasting is curiously social and anti-social, curiously interested in one's neighbour while ignoring him for himself.

The relation of a man to his own mind and to his neighbour's is still more curiously illustrated by a third type of boasting. Though the most vainglorious of all, its motive is not vainglory or any form of vanity, but simply fear. According to Prof. James's classification of the self, it would belong, not to social self-estimation or even to personal vanity, but to another order of things altogether—to material self-seeking. No motive is simpler or more self-regarding than fear. Nevertheless, the boasting which springs from it illuminates in a singular way the complex relations, both with a man's own self and with his neighbour, which may accompany the simplest and most selfish motives. In relation to oneself it is a form of auto-suggestion, and nothing shows better what that form of legerdemain can and what it can not do. It is crowing to keep one's courage up, and, so long as it can crow without feeling danger at its windpipe, it succeeds. After that it exaggerates the danger, not the courage. In relation to one's neighbour it is bluff. The hypothesis it goes on is that other people are as easily terrified as the braggart himself. The hypothesis, when applied to the proper cases, works efficiently; but when, as frequently happens, it is applied to the wrong cases, boasting, like cursing, comes home to roost. All this Shakespeare has embodied in ancient Pistol, in whom the very boy observes 'a killing tongue and a quiet sword.' When his courage is lowest his boast is loudest. If Fortune allows him to meet another coward, he brags a ransom into his pocket; but if she cheats him with the appearance of simplicity and he foolishly encounters a lion, boasting only brings cudgels on his back and raw leeks into his stomach.

3. **Moral.**—That boasting is a perversion of what is great in human nature becomes plainer when we estimate it in relation to moral values. By way of caricature, boasting is a sort of double of the moral personality. Boasting may, of course, be of mere prowess, as when the Assyrian king boasts of the number of his fellow-men he has impaled, or the German student of the rapidity with which he can empty glasses of beer. Even so, however, it proceeds in some way on the belief that worth lies in the will. Just because a due estimate of ourselves ought to be moral, and boasting can turn the attention from the use of the powers to the mere possession of them, it has always been confusing to the moral judgment. Nay, boasting may be a direct attempt to surprise and corrupt the moral judgment into a false verdict. Hence it has in all ages been one of the greatest defences of a debased and impenitent conscience. Could the Assyrian kings have continued to be so cruel if they had never gloried in it on stone? Would the Restoration have been so corrupt if licentiousness had never been a matter to boast of? Would the French Revolution have lost so readily its hope of peace and brotherhood had Napoleon possessed less genius for military swaggering?

No man who boasts much can well hearken to duty at all. Words of boasting, above all other words, do 'give too cold a breath to action.' Why should one toil to cover himself with the painful garment of virtue if he can do it easily and far more spaciously with the garment of self-praise? Moreover, when one has boasted much, it is usual to perform little, and, when the real battle begins, to be, like Falstaff, 'a coward on instinct.'

That is the rule, yet there are many and great exceptions, as the example of Napoleon may remind us. There are men who, like the great showman,

'advertise well, and come up to their advertisement.' This raises the question where boasting ends and right self-trust begins. Would great swelling words not be boasting if afterwards they were turned into deed? Is there no boasting till our self-praise is baseless? Is it only immoral when it is empty? Is Montaigne right when he says: If a man be Cæsar, let him boldly think himself the greatest captain in the world? Is he also to proclaim it as well as think it? Napoleon did so, and we cannot deny that even his saying what he thought of himself may have contributed to his success. Are we to regard valid boasting as simply part of Emerson's advice: 'Trust thyself: every heart vibrates to that iron string'?

The ancient Greek ethics would probably have said, Yes. The 'magnanimous man' of Aristotle's *Ethics* is not quite free from a certain moral swagger as he walks about among his less fortunate fellows. Moreover, much of our modern ethic has returned in theory, as it has long done in practice, nearer to the Greek ideal than to the Christian. Is not the essence of the new ethic to glory in our nature and carry our head high on our shoulders?

The question is whether this attitude shows knowledge either of morality or of human nature. Cæsar's case may be doubtful; but if a man were Shakespeare, would he proclaim himself the greatest poet in the world? Instead, we find him desiring

> 'this man's style and that man's scope,
> With what I most enjoy contented least.'

He knows well enough his powers, but his imagination ranges so far beyond them that he never dreams of making them a boast. Is he not the greater that his greatness reacts thus upon his opinion of himself? Boasting indicates a shrivelled imagination as well as a shrivelled conscience. Hence only the destroyer can boast largely. Did Napoleon ever boast of himself as a great legislator, as he did of being a great conqueror? The creative mind must ever be too conscious of the limitation of its powers in comparison with the greatness of its aim. Were it only because of his knowledge of human nature, therefore, we cannot think of Shakespeare boasting. Moreover, the man who knows the human mind will know too well the bias of one's good opinion of oneself to put even his modest thoughts of himself into words. This self-restraint in expression is no hypocrisy, but a very important part of the task of seeking a just judgment of ourselves—one which shall make due allowance, as it were, for the adjustment of our compasses. As a matter of experience, until a man has made this adjustment, there is small likelihood that he will find his true sphere and walk steadfastly and bravely in it. Boasting is in too great haste to succeed; its confidence lacks reality; as social pretence it is destructive of all real geniality. It is, in short, a poor inflated, deceptive, and, at bottom, terror-stricken pursuit of things which are of no real and abiding value, to the detriment of all that is most sacred and most blessed in life.

Just as the claim of self-assertion in the name of genius only requires sufficient genius to set it at nought, so its claim in the name of morality only requires sufficient morality to exclude boasting. Imitation, Kant says, has no place in morals. Conscience, in Emerson's words, should be no conformist, no sycophant. It must be autonomous, or it is corrupt. But, like the greatest of poets, the true moral man withdraws, by that very obedience to the Divine within him, into a sanctuary where loud words of boasting would be mere desecration, and where he can only bow his head and adore. Not till self is taken up into this higher reverence does it begin to be admirable, and then it has other things to admire besides itself. The moral law thus takes the place of the poet's imagination, and shows man such high demands that he who contemplates it can see himself only as an unprofitable servant.

4. **Religious.**—Boasting, like other elements in human nature, may be studied in relation either to man's primitive struggle or to his ultimate goal. Seen from the latter point of view, it would appear to be simply a confusion of spiritual values, and, as such, an enemy of all true religion. Yet it is a foe which is often of religion's own household. It may be an attempt by auto-suggestion to create for us an image of ourselves which shall serve us in place of God. By that device it enables us to ignore the fundamental problems of religion—our utter feebleness and our utter dependence. Religion is also a self-valuation, but it is a valuation in face of the things which boasting is a device to ignore. Yet there is sufficient kinship between the two to have developed in all religions a self-satisfied Pharisaism, which thinks its own self-esteem must be the measure of God's approval; and boasting would not be so irreligious, were it not for this kinship with the elements in man which religion meets.

According to Ritschl, the very essence of religion is a transcendent estimate of spirit as measurable by no extent and no duration. Faith in God lives by the experience that a thing so weak as the human spirit can be made mighty against time and chance and the bigness of the world. And there is something in the humblest religious man which corresponds to that estimate. Sainte-Beuve (*Port Royal*) says something like this:—There is a hope and a self-esteem in the humility of the Christian which makes pale the pride and ambition of Alexander. But the point is that they are held in humility, in remembrance of God, in the knowledge that we have nothing we have not received, that by the grace of God we are what we are. Thus, and thus only, can men say with the Apostle, 'Where is boasting then? It is excluded' (Ro 3^{27}). The task of all true religion is to effect this exclusion. If, however, it should fail, man turns God Himself into the long shadow of his own self-praise, and that is the culmination and acme of all boasting.

The strange element in genius which Goethe has called 'the demonic' stands in a suggestive way between the trust of humility and the trust of vainglory. Take as examples: 'You carry Cæsar and his fortunes,' and Napoleon's saying, 'The world still turns for us.' They are too self-reliant to be religious, too reliant upon destiny to be boastful. A change in the proportion, and they would be the sayings of braggarts or of saints. Yet Cæsar's and Napoleon's confidence, in face of success and backed by armies, is a small thing compared with the confidence of the humblest of the prophets, faced by disaster and backed by nothing but the Unseen. 'See, I have this day set thee over the nations and over the kingdoms, to pluck up, and to break down, and to destroy, and to overthrow; to build, and to plant' (Jer 1^{10}). All that religion seeks is this change of proportion. Boasting is excluded, and yet the world still turns for us, for all things work together for good to them that love God (Ro 8^{28}); the frailest vessel carries us and our fortunes, for neither life, nor death, nor any created thing can separate us from the love of God; we can trust ourselves and be neither 'mendicant nor sycophantic,' for he that is spiritual judgeth all things (1 Co 2^{15}). Above all, the end of Christianity is to make goodness the goal of all ambition and the measure of all worth, and yet to save men from degrading merit into a boast, or giving it any place at all as merit between us and God.

LITERATURE.—In the OT boasting is regarded as the fruit of ignorance of God and of one's own soul. In 1 K 20[11], 2 Ch 25[19], Ps 49[6] 52[1] 94[4] 97[7], Pr 25[14] 27[1] its folly, danger, and impiety are set forth. In James the OT way of treating the evil re-appears, esp. in 4[6]; but in the rest of the NT, and especially by St. Paul, it is opposed on religious rather than on moral grounds, as the opposite of that humble trust in God's grace which is the only assurance of safety and peace. The Greeks were almost as much alive as the Hebrews to the danger and impiety of boasting. Perhaps it belonged to the Greek temperament that, under the temptation of prosperity, *hybris*, 'insolence,' readily appeared and speedily expressed itself in vaunting. In *The Makers of Hellas*, by E. E. G., 1903, this point is touched on in various connexions, most fully under 'Pindar,' pp. 349–358. On the advertising element in Greek rhetoric, see Hatch, *The Influence of Greek Ideas on the Christian Church*[5], 1895. Besides the essay of Montaigne referred to in the text, and more important, is Bacon's essay, *Of Vainglory*, wherein with much worldly wisdom the advantages of boasting have full justice done them. 'Glorious men are the scorn of wise men, the admiration of fools, the idols of parasites, and the slaves of their own vaunts.' Modern writers, for the most part, deal with vanity and self-exaltation as an inward feeling only, either not seeing that every feeling is changed by passing into utterance or taking it for granted that, in this age of publicity and education, good taste and the fear of man would prevent it. The boaster has therefore been left almost exclusively to the novelist, who has made free use of the picturesque braggart. Those who occur to the mind most readily are Scott's creations, nearly all of whom display their art on a background of rather hypocritical religion. All Psychologies attend to the phenomenon of self-assertion, but rarely realize its tendency to display itself in speech. In the *Principles of Psychology*, by William James (2 vols., London, 1891), self-satisfaction as a primitive emotion is discussed in the section on 'Self-feeling,' i. 305. Paulsen (*A System of Ethics*, London, 1899) distinguishes between pride, which wishes to be somebody, and vanity, which wishes only to appear somebody. In several books, *e.g. A Manual of Psychology*, by G. F. Stout (1899), the relation of boasting to the pathology of the mind is recognized, but nothing is made of it, and the matter ends purely physiologically. The older Evangelical preachers dealt frequently with such subjects as salvation without boasting; *e.g.* in Simeon's *Works* (1832) there are three such sermons: iii. 423, xvi. 603, xvii. 297. Modern sermons tend to deal more with motives, but F. W. Robertson's Sermon (iii. 1) on 'The Tongue' is interesting, because it indicates the relation of boasting to slander and persecution. Cf. also *Cathedral and University Sermons*, by R. W. Church (1892) [in Serm. 4, a discussion of the modern equivalent of the Greek *hybris*]; and suggestions in Newman's *Parochial and Plain Sermons*, 1868 (i. 152: 'Profession without Ostentation,' and viii. 17: 'Vanity of Human Glory').

BODHISATTVA (in Sanskrit literature).—

Introduction: (1) Etymology, (2) Little Vehicle.
I. Principles conducive to Buddhahood.
II. Controversy (Little Vehicle): Is a Bodhisattva a supernatural being?
III. Stages in the career of a Bodhisattva.
IV. Spiritual life of a candidate for Buddhahood.

INTRODUCTION.—(1) *Etymology*.—*Bodhisattva* is usually translated 'one whose essence is perfect knowledge' (*sattva* = 'essence,' 'own nature,' *svabhāva*). It is very possible that this was the original meaning of the word; historically, however, *bodhisattva* = 'one who is on the way to the attainment of perfect knowledge' (Monier-Williams, *Dict. s.v.*), *i.e.* 'a future Buddha.' As a matter of fact, according to the native Lexx., *sattva* = *chitta*, 'thought,' *vyavasāya*, 'decision,' 'determination'; and a Buddhist commentator explains it as an equivalent of *abhiprāya*, 'intention,' 'purpose'; thus we should have *bodhisattva* = 'one whose intentions (or wishes) are fixed on perfect knowledge.' *

This last translation is correct so far as (1) the Bodhisattvas of the Little Vehicle, and (2) the inferior Bodhisattvas of the Great Vehicle are concerned. But we shall see that there are also Bodhisattvas 'whose essence is perfect knowledge.' The *Prajñāpāramitā* in 2500 articles supports this view, and furnishes us with the curious equation: *rjes-su rtogs-paí sems-dpa* = *anubuddhasattva*, contrasted with *skye-baí sems-dpa* = *utpannasattva* and *abhisaṁskārasattva* (see *Madhyamakāvat.* xiv. 10).

There are a few analogous formations, but they seem to be exclusively Buddhist: (a) *Jñānasattva*, 'one whose essence is knowledge' or 'intelligence'—an epithet of Mañjuśrī, and in Mysticism a common appellation of very great magicians or ascetics; (b) *Vajrasattva*, 'one whose essence is diamond' or 'thunderbolt' (see vol. i. p. 99, and art. TANTRAS); (c) *Śrībodhisattvas*, 'holy' or 'sacred Bodhisattvas,' the honorific prefix being added to make a distinction between the Bodhisattvas of certain mystical categories; (d) *Vajrabodhisattvas*, with the same significance (see art. TANTRAS); (e) although the usual Tibetan translation is *byaṅ-chub sems-dpa*, the reading *rdzogs-paí byaṅ-chub sems-dpa* (*Madhyamakāvat.* p. 79. 3) is sometimes found, which points to an original *sambodhisattva*.

(2) *Little Vehicle*.—According to the doctrines of the Little Vehicle, there have been only a few Buddhas. The Pāli sources enumerate thirty-four previous to Śākyamuni, but the last six names alone occur in the Nikāyas and agree with the Sanskrit lists. Although plurality of Buddhas is certainly an ancient dogma, attested not only by this coincidence of both traditions, but also by epigraphic evidence (Bhārhut [*q.v.*]), there is no indication in the oldest literature that Śākyamuni or his immediate disciples called upon the faithful to follow in the steps of former Buddhas, and themselves to become Buddhas. Śākyamuni is the Master or the god; he is not, properly speaking, a model. The faithful ought to become *arhats*, i.e. to quench the passions by abstinence, to subdue the fire of thought by the exercise of the four ecstasies (*dhyānas*), and thus to destroy the seed of re-birth (see art. ARHAT). Thenceforward speculation on the character and career of the future Buddhas has no very marked practical interest; its value for religion consists only in the light which it throws on the transcendent virtues of the Buddha.

Let us recall the essential characteristics of the most ancient theory. It is found almost complete in the biography of Śākyamuni.* Four *asaṅkhyeyas* (incalculable periods, see art. AGES OF THE WORLD [Bud.]) and a hundred thousand ages (*kalpas*) have passed since the future Śākyamuni, who then bore the name of Sumedha, discovered the way to nirvāṇa through the attainment of arhat-ship; but at the sight of the Buddha Dīpaṅkara, then 'reigning,' he renounced immediate nirvāṇa in order to become a Buddha, and thenceforward he was a Bodhisattva. This is his vow (*praṇidhāna*) or supplication (*prārthanā, abhinirhāra*). Dīpaṅkara proceeds to ascertain whether the vow will be fulfilled, and announces that in the distant future Sumedha will be the perfect Buddha Śākyamuni. This is the prophecy (*vyākaraṇa*).† Sumedha now knows that he is a seed of Buddha (*buddhabīja*), a young shoot of Buddha (*buddhāṅkura*), and with firm resolution he seeks and practises the ten virtues (*pāramitā*) ‡ that make a Buddha. His 'career' or 'course' (*charyā*) continues through numerous re-births, animal, human, and divine. At last the future Śākyamuni is re-born in a high heaven, as king of the Tuṣita gods; and it is there that, a hundred thousand years before the attainment of the Bodhi, an acclamation (*halāhala*) of the gods arises foretelling the sure success of the future Buddha.§ Leaving the throne of the Tuṣitas,

* See *Bodhicharyāvatārap.* p. 421, 15 (*tatra [bodhau] sattvam abhiprāyo 'syeti bodhisattvaḥ*); *Madhyamakāvatāra*, p. 182, 18 f., *bodhisattva* = *bodhiniyatasattva*; other etymologies, *Sūtrālaṅkāra*, xix. 76 f.

* The chief source is very late. It is the *Introduction to the Jātaka* (5th cent. A.D., ed. Fausböll, tr. Rhys Davids, *Buddhist Birth Stories*, 1880, and Chalmers, 1895). See Rockhill, *JAOS* 18, i. 1; Spence Hardy, *Manual*, p. 88; and Kern, *Manual*, p. 65.

† *i.e.* the *Dīpaṅkarajātaka*, so famous in the literature, the Chinese records, and the sculptures. See Foucher, *Art gréco-bouddhique*, i. 273. In the *Mahāvastu*, the future Śākyamuni is called Megha; in the *Divyāvadāna*, Sumati. When the future Buddha has been *vyākṛta*, he cannot turn backward; he is *niyata*, 'definitely assured of becoming Buddha.' In the Great Vehicle, mention is made of the 'appointment,' 'qualification' to Buddhahood given to the candidate by the Buddhas. Such a 'qualified' man possesses 'causes of success' (*pūrvajinakṛtādhikāra* = *hetusaṁpanna bodhisattva*); and such 'qualification' can be styled 'benediction' (*adhiṣṭhāna*). There is a second *vyākaraṇa*, styled 'great,' in the eighth stage (see *Sūtrālaṅkāra*, xix. 35).

‡ See below, p. 740.

§ There are therefore three stages: the vow (*abhinirhāra*), the prophecy (*vyākaraṇa*), and the acclamation (*halāhala*). According to Sp. Hardy (*apud* Kern), the stages are: intention (*manas*), vow (*praṇidhāna*), pronouncing that vow (*vākpraṇidhāna*), revelation (*vivaraṇa*). On the systems of the *Mahāvastu* and the Great Vehicle, see p. 744 ff.

he is born in the womb of Māyādevī,* and lives, in human form, his last existence; under the Tree he attains to Bodhi; at Bodh Gayā he enters nirvāṇa.

We must not, however, overlook the important fact that the schools of the Little Vehicle, not only in Ceylon but also in India proper (Sautrāntikas, Vaibhāṣikas, etc.), have survived the rise of the Great Vehicle, and naturally they have profited by the advance of speculation. The *Abhidharmakośavyākhyā* (MS of the Asiatic Society, fol. 263) expresses itself as follows, concerning Arhats as compared with Bodhisattvas: 'Having expelled self-love from the series of *saṁskāras* that constitutes their pseudo-individuality, they develop an interest in the affairs of others, an interest born of compassion, and thet destroy all pain. The ordinary man (*madhya*), i.e. the Pratyekabuddha, and the Śrāvaka (candidate for arhat-ship) desire merely deliverance, that is to say, an end of suffering, and not happiness during the existences of the *saṁsāra*; because this temporal happiness is an abode of suffering. The superior man (*śreṣṭha*), i.e. the Bodhisattva, wishes, at the cost of personal sufferings, temporal happiness (*ābhyudayika*) for others, and the definite end of suffering, which is supreme happiness (*niḥśreyasasvabhāva*); or he desires for others supreme and temporal happiness (*sukham ābhyudayikanaiḥśreyasikam*), and for himself the definite end of suffering, *i.e.* Buddhahood, as a means of realizing this service of others.'

The modifications or improvements introduced into the above doctrines either by different schools of the Little Vehicle or by the Great Vehicle are of several kinds. They may be grouped under four heads, the discussion of which will complete the present article: (1) accurate determination of the elements of Buddhahood, *i.e.* principles conducive to Buddhahood (*buddhakāraka dharma*); (2) determination of the character of the Bodhisattva—is he a 'hyperphysical' being? can he retrace his course?; (3) determination of the successive stages in the career of the future Buddha; and (4) practical organization of the life of a disciple regarded as a candidate for Buddhahood.

I. PRINCIPLES CONDUCIVE TO BUDDHAHOOD.—The Bodhi,† Enlightenment, Perfect Knowledge, is not the exclusive possession of Buddhas.‡ All beings who achieve deliverance, whether as Pratyekabuddhas or as Arhats, can accomplish their aim only if the 'sight of the truth' has destroyed in them the conception of the ego, the idea of existence and non-existence, the desire for existence and for non-existence, etc. But the *bodhi* of the Buddhas, or *samyaksambodhi*, includes not only the possession of the truth indispensable to salvation, but also omniscience (*sarvajñatva*), universal knowledge (*sarvākārajñatva*), and consequently omnipotence. The Perfect Buddha owes these unique prerogatives to his prolonged meditations (which have given him insight into the principles of everything, with power to subject them to his will), and to his infinite merits of charity, patience, etc.

In ancient Buddhism, the Buddha seems to differ from the Arhats especially in that he has discovered the true way of salvation, while the Arhats learn it from his lips; and from the Pratyekabuddhas in that he undertakes to teach this truth. The difference, however, is more fundamental, as will be seen below in the study of the *lokottara* doctrines (see below, p. 741). The ten virtues ascribed to the future Buddha, or perfect virtues, are in the Little Vehicle: (1) almsgiving, (2) morality, (3) renunciation of the world (*nekkhamma*), (4) wisdom or knowledge, (5) energy, (6) forbearance or patience, (7) truthfulness (*sachcha*), (8) resolution (*adhiṭṭhāna*), (9) charity or benevolence (*mettā*), (10) indifference, equanimity (*upekkhā*).* That there is nothing systematic here is evident. It is different in the Great Vehicle.

The Bodhisattva, or future Buddha, who would attain Bodhi, must therefore practise the six 'transcendent' virtues or *pāramitās*.† By this word is to be understood, properly speaking, *prajñā*, 'knowledge,' or 'wisdom.' *Pāramitā*, taken as an adjective, means 'arrived at the other side' of transmigration, *i.e.* at nirvāṇa. Knowledge alone, however, or insight into the truth, allows the destruction of the germ of existence. The other *pāramitās*, or the virtues of charity (*dāna*), morality (*śīla*), and patience (*kṣānti*) deserve the name only as their merit is applied to the attainment of Buddhahood. They are called natural (*laukika*) when they are not illuminated by knowledge, for example, when the charitable man believes in the substantial reality 'of the mendicant, the alms, and the donor'; they are said to be supernatural (*lokottara*) when knowledge becomes their guide, 'just as a man possessed of sight leads a group of the blind to the desired place.' It is essential, for instance, that charity be practised without any idea of the substantial reality of the three elements of almsgiving (giver, alms, mendicant), or rather, without even admitting the momentary reality of these three elements (*trikoṭipariśuddhā maitrī*).

There is another classification given: *karuṇā* (pity) or *maitrī* benevolence) directed towards (1) creatures (*sattvālambana*), or (2) the 'dharmas' (*dharmālambana*), or (3) without object (*anālambana*) [*Śikṣās*. 212. 12]. It may be assumed that, etymologically at least, the second stage is practised by a man who has recognized the nothingness of the ego (*pudgalanairātmya*), but still believes in the reality of the elements constituting this apparent ego (*dharmasvabhāva*). The books of the Prajñā draw a distinction between the Bodhisattva 'who perceives things' (*aupalambika*) and the Bodhisattva who does not perceive them, thus discarding the second stage (see art. MAHĀYĀNA).

The virtues of charity, morality, and patience constitute the equipment of merit (*puṇyasambhāra*) of the future Buddha. They are sustained by the virtue of energy (*vīrya*). They bear fruit, more and more excellent in the course of time, and at last realize what is called the 'material body' (*rūpakāya*) of a Buddha, whether it be the body adorned with the thirty-two signs, etc., exhibited by Śākyamuni (see below, p. 742b), or rather the so-called beatific body (*sambhogakāya*, 'body of enjoyment') which the Buddhas exhibit in paradises to the hosts of Bodhisattvas worshipping them.

The virtue of knowledge (*prajñā*) is sustained by energy and nourished by the virtue of meditation or contemplation (*dhyāna*, *samādhi*). We have seen that it illuminates and guides the so-called virtues of merit (*puṇya*). On the other hand, it cannot exist without these virtues. In fact, not only does knowledge require a pure 'field' wherein to be born and develop, but it also requires practical exercise. The abstract theoretical view of the nothingness of the ego (*pudgala*) and of the nothingness of things (*dharmas*) cannot destroy the illusion which makes us believe in the ego and things, unless the growing exercise of charity teaches us to sacrifice our goods, our bodies, and our lives. Science constitutes the equipment of knowledge (*jñānasambhāra*), which is the real cause of what is called the 'body of law of a Buddha' (*dharmakāya*; see artt. ĀDIBUDDHA, MAHĀYĀNA), that is to say, 'a series of perfectly pure principles' (*anāsravadharmasantāna*), 'empti-

* On this descent and the miracles of the uterine life, see Windisch, *Buddhas Geburt*, p. 110 f.

† Authorities: *Madhyamakāvatāra*, *Bodhisattvacharyāvatāra*, *Lalitavistara* [list of the 100 *dharmālokamukhas*, p. 31 ff., tr. by Kern, *Gesch.* i. 405; this will probably be thought less systematic than the arrangement in the texts cited above. It will be observed (35. 2) that the four *sambhāras* were later reduced to two]. The scholastic explanation of the problem would lead us too far. A summary of it will be found in Kern, *Manual*, pp. 62 and 67. On the development of the theory of the Bodhipakkhiyas within the Little Vehicle from the ancient sūtras to Buddhaghoṣa, see C. A. F. Rhys Davids, *Vibhaṅga*, p. xiv f.

‡ See, Kern, *Manual*, 61, n. 4; Oldenberg, *Buddha*², 321. In the art. MAHĀYĀNA the question will be discussed whether it is possible to arrive at deliverance by way of arhat-ship, and, incidentally, whether all beings are destined to become Buddhas.

* See Kern, *Manual*, p. 66; Childers, p. 335. Each of these ten virtues has three degrees: *upapāramitā*, *pāramitā*, *paramatthapāramitā*, e.g. with regard to almsgiving: (1) giving of external goods, (2) sacrifice of limbs, (3) sacrifice of life. One of the canonical books (*Chariyāpiṭaka*), not one of the oldest, 'containing thirty-four short Jātakas turned into verse' (Rhys Davids, *Buddhist India*, p. 176), gives examples showing how Śākyamuni practised all these virtues.

† See F. W. Thomas, *JRAS*, 1904, p. 547; *Madhyamakāvatāra*, p. 30; and *Muséon*, 1907, p. 278. A cognate form is *pāramī*; and there is also *paramatā*, 'excellence,' which forms a sort of play upon words. On the system of the ten *pāramitās* in the Great Vehicle, see below, p. 748.

ness devoid of support' (*nirālambā śūnyatā*), in other words, empty aimless thought, the quiescence of intelligence which is nirvāṇa.*

Each of the *pāramitās* bears fruits relative to the Bodhisattva and to creatures. Giving endues the Bodhisattva with a Buddha body and 'causes to ripen' (=converts) avaricious beings; morality causes him to escape evil destinies and converts immoral beings; patience suppresses all wickedness, all selfishness, all pride, and converts wicked creatures, etc. (*Lal.* 34 ff.).

The *pāramitās*, however, are often regarded as having for chief, nay for only, aim to 'mature the qualities of a Buddha' in the Bodhisattva who practises them. But we must not overlook the important fact that a future Buddha acquires the quality of Buddha not for himself but solely for the good of creatures. If he accumulates so much merit, knowledge, and sovereignty, it is in order to put them at the service of beings, as much in a direct way, by his own activity when he is a 'Bodhisattva become Tathāgata,' as in an indirect way, by the efficacy of his 'vows' after he has entered nirvāṇa. It is expedient, however, that henceforth the future Buddha should labour in the service of beings, that he should be engaged in 'maturing beings,' anticipating the task which later on he will perfectly accomplish. This is the part played by the four *saṅgrahavastus*, or 'topics leading to the sympathy of creatures'; which are: giving, kindly address (*priyavāditā*), putting into practice rules of altruism (*arthacharyā*), practising ourselves the virtues we recommend to our neighbours (*samānārthatā*).† This charitable activity is so important that the Bodhisattva is worthy of the name for the simple reason that he devotes himself to it.

From the preceding definitions there follows, as we shall see, the whole system of the career of the Bodhisattva (*bodhisattvacharyā*). The thought of illumination, or *bodhichitta*, that is to say, 'the thought of becoming Buddha for the salvation of creatures,' is its primary cause and basis. This thought has, of course, antecedents: in the first place, the practice of good from selfish motives, either for the sake of temporal rewards (*i.e.* in celestial re-births, etc.) or with a view to nirvāṇa; and then, the desire of the good of others for their own sake, which already distinguishes the future Bodhisattva (however great his faults otherwise) from the future Arhats.

This thought is essentially born of compassion (*karuṇā*) and emptiness (*śūnyatā*). If there were no compassion, as in the Little Vehicle, we should have to do merely with an egotistical saint. If there were no recognition of emptiness, the compassion would be much more shallow and liable to change, for where belief in the 'ego' exists, how can any one prefer his neighbour to himself? He may perhaps in a moment of exaltation, but not permanently. But the teaching of the Buddhas is there placed providentially within reach of the 'good' (*sādhu*), and they produce thoughts of compassion, however imperfect these may be. This teaching then purifies and enlarges the compassion by giving it an aim, viz. the acquirement of the Bodhi, and a support, viz. the recognition of emptiness and the explanation of the world which it implies.

The Bodhisattva studies, cultivates, conquers, ripens, takes hold of the highest 'concentrations' of Voidness, of Wisdom, but he does not 'realize' them (*na sākṣātkaroti*); otherwise he would obtain nirvāṇa as a Śrāvaka or as a Pratyekabuddha (see *Aṣṭasāhasrikā*, ch. xx.).

II. Controversy of the Lokottaravāda.—The controversy on the metaphysical character of the Bodhisattva certainly goes back to one of the most ancient periods of Buddhist speculation. We are acquainted with it only in so far as we are informed concerning this speculation itself at its beginning, that is to say, our knowledge is very imperfect. One of the most ancient schisms (*bheda*, as the Buddhists call it) was connected, according to unanimous tradition, with the question whether the Buddha is *lokottara*, *i.e.* 'superior to the world,' 'supernatural,' 'hyperphysical.'

* It is in this way that the Buddhists have endeavoured to assure the stability of their system, and to reconcile the serious antinomy of the two dogmas: 'Nothing exists,' and 'We must work, labour, suffer for our neighbour.' It is certain, says a Mādhyamika philosopher, that our neighbour does not exist; but the Bodhisattva cherishes within himself this illusion (*moha*) that he must become Buddha for the salvation of creatures; if not the only way, yet it is the best way to destroy the illusion of the ego and of suffering (see artt. Mahāyāna, Mādhyamikas, Vijñānavādins).

† This explanation of these words is borrowed from the *Bodhisattvabhūmi*; for variations in the wording and definitions, see Kern, *Manual*, p. 67, n. 6; Burnouf, *Lotus*, p. 405; Minayeff, *Recherches*, p. 278, and below, p. 750ᵃ.

The meaning of the word *lokottara* (Pāli *lokuttara*) in this connexion can be ascertained. As a rule, in the current language of theology, 'superior to the world' in contrast to *laukika*, 'worldly,' refers to what leads to nirvāṇa, what belongs to the Buddhist saints as such; it is a question of meditation, ecstasies, merit, etc. [The Bodhisattva is said to enter the *lokottara gati* when he reaches his first 'stage.'] It is most probable that the word has a distinct signification here, susceptible of shades of meaning, not admitting of definite determination, but which would certainly be unfairly pressed, if, in harmony with certain views of the Great Vehicle, we were to understand it to mean 'superior to the triple world of concupiscence, of material beings without concupiscence, of beings free from matter,' 'superior to the world of becoming,' escaped from the *saṁsāra*, or entering therein only by celestial magic, as the Kṛṣṇa of the *Bhagavadgītā* (see below). But it would be a much more serious mistake to give to the word *lokottara* the meaning attributed to it by Pāli scholars, that the Buddha is 'superior to the world' because, although of this world, he is not defiled by the vices of the world. The schools which are heretical from the orthodox Pāli standpoint meant quite a different thing by *lokottara*, otherwise the question of its significance would never have been raised, and it would be incomprehensible that a school should be characterized, or should describe itself, as 'affirming the Buddha's superiority to the world' (*lokottaravādin*).*

We ought to be cautious not to introduce too much exactness into the ancient views of the Order, and, to say the least of it, not to outrun the development of Buddhist doctrine. We may say that the traditional data and the earliest views regarding Śākyamuni, before as well as after the conquest of the Bodhi, were capable of being arranged, if not in two systems, yet on the lines of two opposing movements or tendencies. According to one of these, which we may call *rationalist*, and which manifests itself in the Vaibhajyavādin Schools, Pāli or Sanskrit, etc., Śākyamuni, born after the manner of men, became an Arhat by the conquest of truth, and his sole superiority consists in this conquest effected by his own power. Given the philosophical and atheistic antecedents of Buddhism, 'no metaphysical superiority over other beings could belong to the Buddha by virtue of his birth; only as being greater, more strenuous in his efforts, was it reserved to him to trace out that path wherein others have nothing to do but to follow. In a certain sense we may say that every disciple who is pressing on to holiness is also a Buddha equally with his Master.'† In reality this standpoint is not strictly maintained by any sect, and the Pāli canon, which otherwise represents rationalist doctrines, is far from exhibiting perfect euhemerism. But by the comparison of features scattered throughout this canon as well as elsewhere, we find traces of a very violent reaction against the tendency which we shall call *mythological* and *theological*.

One text says that the conception of Śākyamuni was not independent of the intercourse of his father and mother—a fact which contradicts a universally accepted doctrine.‡ There are set forth, as characteristic of the Mahāsāṅghika-Lokottaravādin School, the doctrines (1) of the Bodhisattva's descent into the maternal womb in the form of an elephant, (2) of the miracles of the uterine life (the Bodhisattva does not pass through the ordinary forms of the embryo, etc.), (3) of the birth through his mother's side: three doctrines which are admitted in the Pāli books (the first with certain modi-

* Buddhists naturally maintain that the doctrine was originally one, and that the 'heretical' views arose much later in the course of the centuries. This opinion, on other grounds, is far from being altogether mistaken (see artt. Mahāyāna, Sects [Bud.]). In the present case, we may reasonably hold that the conflicting doctrines are both very old, or, if we prefer, primitive. See the definition of *lokottara*, *Atthasālinī*, pp. 213–4; and on the confusion of Bodhisattva and Bhagavat, see Oldenberg, *Buddh. Stud.* 642.

† See Oldenberg, *Buddha*⁵, 381.

‡ The only canonical Pāli texts that treat, with any detail, of the conception, the uterine life, and the birth of the Bodhisattva, are, if the writer is not mistaken, *Majjhima*, iii. 118, and *Dīgha*, ii. 12; see also *Aṅguttara*, ii. 130 (Kern, *Man.* 13, n. 2). In all the texts the Bodhisattva is *aupapāduka*, that is to say, he becomes incarnate by his own wish, and without regard to the ordinary laws of conception (to deny the existence of such beings is a great heresy, *Dīgha*, i. 55). The only exceptions are (1) the Tibetan *Abhiniṣkramaṇasūtra*, where the Bodhisattva *seems* to choose the moment of the loves of Śuddhodana and Māyādevī to study the country, the caste, and the woman in whom he is to become incarnate [see Foucaux, tr. of *Lalita.*, 1848, p. xxi; references to *Dulva*, iii. 449, where Rockhill's interpretation (*Life*, p. 15) seems less correct; see also *Milinda*, p. 75, which is not so explicit]; (2) *Lalita*, p. 87, where unbelievers are condemned; and (3) such texts as collected by Windisch, *Buddhas Geburt*, p. 142. The Bodhisattva chooses Śuddhodana as his father, let us say as his 'putative' father, because Sumitra 'is too old, not able to beget children, and he already has too many sons.' That such statements prove nothing is evident from the fact that they occur in the *Lalitavistara*. On the other hand, it is only in the *Mahāvastu* that the virginity of the mother of Buddha is asserted.

fications),* but which must have been disputed, or the Mahāsāṅghikas would not have given them such an important place. We are told elsewhere that it is a great mistake 'not to give Buddha the highest praise, to teach that the perfect Buddhas have nothing that differentiates them from the world, and not to proclaim that the perfect Buddhas are superior to the world.'†

To these negative evidences must be added the well-known biographical facts that the future Buddha left his home only under the pressure of external influences, that he gave himself up to the guidance of ignorant teachers, and became addicted to useless austerities; further, that, after having become Buddha, he did not resolve to preach the Law until he was entreated by Brahmā, that he was, in part at least, under the influence of former sin,‡ that at first he wished to preach the Law to some friends who were already dead, and that he died at last from the abuse he had made of pork.§ Some venture to say that his premature death is the punishment of an ancient murder (according to the *Suvarnaprabhāsa*). But, on the other hand, we have express declarations of the Master, showing that he is superior to the world: 'I am not a man, a god. . . . Know, O Brāhman, that I am a Buddha'; and again: 'Born in the world, brought up in the world, I have risen, and I dwell above the world.' Whence it follows that Śākyamuni, born as a man, has, by the conquest of the Bodhi, obtained a transformation of his nature; he is no longer a man, he is not an Arhat, he is a Buddha.

Neither of these texts—the second (*Saṁyutta*, iii. 140 and elsewhere) is quoted by the Vetulyakas to support their docetic views (*Kathāvatthu*, xviii. 1, see below, p. 745a), the first (*Aṅguttara*, ii. 38) is mentioned by Kern (*Manual*, p. 64)—is, of course, altogether conclusive. Neither the author of the *Kathāvatthu* nor Prof. Oldenberg would admit the *lokottara* interpretation. Oldenberg says in so many words that Kern has misunderstood the meaning of the saying, 'I am not a man . . . I am a Buddha.' The present writer believes that, whatever may be its genuine meaning, it could lead to the conclusion that Buddha's humanity is apparent only. It is a dogma of the Little Vehicle that Śākyamuni, since he became a Buddha, possesses 'nirvāṇa-with-residue' (*sopadhiśeṣanirvāṇa*); he is *parinirvṛta*, that is to say, altogether passionless, *ergo* not a man. Such is the interpretation of Buddhaghoṣa (Oldenberg). But a Buddha is not only free from passion, he is free from thought, the Bodhi being, as well said by M. Oltramare, 'hyperconsciousness' or 'non-consciousness' (*prajñāpāramitā*). Therefore the visible frame, the audible words, the whole of the personality that we call a Buddha, is only a show contrived by the compassionate resolution formed by the future Buddha. We shall not say that the author of the saying, 'I am not a man . . .' foresaw such a development of the *lokottara* Buddhology; but he opened the door to it, and, in any case, his testimony destroys the hypothesis of a primitive Buddhism altogether euhemerist.

Reference may be made (1) to the faculty that Śākyamuni possesses of living for many centuries down to the end of the age of the world (*Digha*, ii. 118); (2) to his 'transfiguration' (*ib.* p. 134); and especially (3) to his power of assuming the aspect of his auditors: 'When I used to enter into an assembly of many hundred nobles [or *brahmans*, householders, gods, Māra-gods, Brahma-gods], before I had seated myself there . . . I used to become in colour like unto their colour, and in voice like unto their voice. . . . But they knew me not when I spoke, and would say, "Who may this be who thus speaks? a man or a god?" Then having instructed them, . . . I would vanish away. But they knew me not even when I vanished away; and would say, ". . . a man or a god?"' (*ib.* p. 109; Rhys Davids, *SBE* xi. 48). The Buddha Śākyamuni is neither a man nor a god; he *appears* as a man or as a god; he is a Buddha; he is above and outside of existence.

* It is generally said that the mother of Buddha *dreamt* that a white elephant with six tusks entered her womb (*Jātaka*, p. 50; Rockhill, *Life*, p. 15; also *Abhidharmakośavyākhyā*, fol. 219); in the *Lalita*, p. 55, the Bodhisattva is transformed into an elephant. On the Bhārhut medallion representing the 'descent of Bhagavat' (Plate xxviii.), see Minayeff, *Recherches*, p. 146; Oldenberg, *Buddh. Studien*, p. 642; Foucher, *Art gréco-bouddhique*, i. 291.

† *Mahāvastu*, i. 96.

‡ On this point, which is open to dispute, see *Milinda*, 134; Rhys Davids, i. 190; cf. *Mahāvastu*, i. 169, 6. It is certain that the 'Pāli' Buddha is not free from suffering.

§ With regard to this obscure subject see Fleet, *JRAS*, 1906, p 881.

Śākyamuni, then, was born as a man. It is, in fact, an ancient belief that every future Buddha, in his last existence (*charamabhavika bodhisattva*) must assume human form, at one time as a Kṣatriya, at another as a Brāhman.* He is, however, a very extraordinary man. And the question arises, To what extent has he taken possession of the exceptional prerogatives of the Buddhas, before the conquest of the Bodhi?

From the time of his birth Śākyamuni possesses the thirty-two marks (*lakṣaṇa*, *lakkhana*) of the 'great man' (*mahāpuruṣa*), and the eighty secondary signs (*anuvyañjana*). [Sanskrit authorities in *Dharmasaṅgraha*, p. 53 f.; *Mahāvastu*, ii. 29, 213 f.; *Bodhisattvabhūmi*, III. v.; Pāli authorities in *Majjhima*, ii. 136; *Digha*, ii. 17.] These marks, to which E. Senart has devoted very careful study (*Légende du Buddha*), whatever may be their historical, mythological, or dogmatic explanation, establish mysterious relations between the Buddha and Viṣṇu. Although the name *mahāpuruṣa*, which is the current designation of Viṣṇu, is applied, in Buddhism, to the eight classes of Āryas (*srotaāpattiphalapratipannaka*, etc., *Madhyamakavṛtti*, xxiv.; cf. *Chullavagga*, xii. 2, 5), the marks are ascribed only to universal sovereigns (*chakravartins*), and to Bodhisattvas in their last existence. To an experienced eye, however, the marks of the former are quite distinct from those of the latter (see *Lalitavistara*, ed. Lefmann, 106, 6; *Rgya-cher-rol-pa*, 98, l. 19, and the emendation proposed, mistakenly, in the present writer's opinion, by E. Senart, *Légende*, 88 n.).

[It must be added that, if Buddhas alone possess the 'marks' in their perfection, the future Buddhas possess the same in germ-state and 'ripen' them for centuries; see *Lotus*, viii. 18; *Bodhicharyāvatāra*, vii. 44; *Bodhisattvabhūmi*, III. v.; *Abhidharmakoṣa*, Soc. As. 219*b*.]

But if Śākyamuni, before the Bodhi, is a very extraordinary man, universal sovereigns, and especially those who reign over the four continents (*chāturdvipaka*), are no less superhuman; they are nevertheless men. It remains to be seen whether the body that Śākyamuni showed to gods and men on this earth was a real body or an illusion. This question now demands an answer so far as possible.

One of the schools, the Lokottaravādin Mahāsāṅghikas of the Madhyadeśa† (a half-Sanskritizing sect of the Little Vehicle), teaches not only that the Buddhas have nothing in common with the world (*lokena samam*), that everything about them is supernatural (*lokottaram*), that, if they seem to think, speak, act, and suffer like us, it is merely by condescension, in order to conform outwardly to our weakness (*lokānuvartana*),‡ but also that the Bodhisattvas are in no way born from father and mother, that they are produced by their own powers (*svaguṇanirvṛtta*), that their mothers (and their wives also) are virgins, and that, if they come forth from their mothers' right side without injuring her, it is because their form (*rūpa*), i.e. their body, is entirely spiritual (*manomaya*, 'made of mind'), *i.e.* *quasi*-immaterial. And a sect, the Ekavyavahārikas, closely connected with the Lokottaravādins of the *Mahāvastu*, maintain that there is no matter (*rūpa*) in the Buddha.§

It is evident, therefore, that the manifestation in this world of the marvellous being who reigned among the Tuṣita gods was not in reality what it seemed to be. The Bodhisattva, after all, assumed merely an empty appearance of humanity in condescension to the ways of the world (*lokānuvar-*

* *Lalita* (p. 88) explains that, if the Wheel of the Law were to be moved by a god, *i.e.* if Buddha were to appear as a god, men would feel discouragement.

† This sect, which we shall discuss presently (see below, p. 744), is comparatively well known to us through the *Mahāvastu*, one of its canonical books, edited by E. Senart (see A. Barth, *Journal des Savants*, Aug.–Oct. 1899, from which we borrow freely), and also through the *Kathāvatthu* and the works of Vasumitra and Bhavya on the sects (see Wassilieff, *Buddhismus*; Rockhill, *Life*).

The Buddhist *Madhyadeśa*, 'central region,' lies to the East of the Madhyadeśa properly so called. It is in reality the *Prāgdeśa*. For the boundaries see *Mahāvagga*, v. 13, 12 (in Kern, *Man.* 13, n. 3).

‡ *Mahāvastu*, i. 167, 15 ff. The same formula (*eṣā lokānuvartanā*) is familiar to the Pūrvaśailas who apply it to the contradictory doctrines taught by the Buddha. It is in order to put himself into touch with the faithful that he preaches doctrines serviceable (*pudgala*, *skandha*, etc.), but in reality false (see *Madhyamakāvatāra*, p. 314).

§ Rockhill, *Life*, p. 188. On the mind-made body, see the discussion in Poussin, *Opinions sur l'histoire de la dogmatique bouddhique*, Paris, 1909, p. 258.

tana). The body which he shows to men and gods conceals its true nature from the 'worldly' mind. One may go further, and say that this body is only an illusion. Certain heretics of the *Kathāvatthu* (xvii. 1),* forerunning the Great Vehicle, say that it is not true that Śākyamuni descended in person into the womb of Māyā; he merely sent down to this world a double of his person, or, rather, a phantom. According to the *Daśabhūmika*, and also (a fact which has not been sufficiently noted) the *Lalitavistara* (p. 36) the Bodhisattva does not come down to the earth; he does no more than 'show' (*sandarśayati*) his descent, his sojourn in the womb of Māyā, his conquest of the Bodhi, and nirvāṇa.† In the *Lotus of the True Law* and in later systems the Buddha thus manifests himself on several occasions, appearing as a 'Bodhisattva in his last birth' (see artt. LOTUS OF THE TRUE LAW, ĀDIBUDDHA, etc.). This theory of the apparent descents, *avatāras* of the *quasi*-eternal Tathāgata, is the last phase of the *lokottaravāda*. According to *Sutrālaṅkāra*, Śākyamuni, even in the Tuṣita-heaven, is a phantom, a 'contrived body' (*nirmāṇa*).

According to another theory, less categorical, the Law has been preached by Ānanda (*Kathāvatthu*, xviii. 1). This means that Śākyamuni, although he was a real man, flesh and bones, nevertheless remained, since the Enlightenment, in a definite state of concentration or trance (*samādhi*, *dhyāna*); and can a being in *dhyāna*-state speak? We know from *Kathāvatthu* and from Bhavya that schools were at a loss to settle this question. Doctors who deny the power of speaking to the 'concentrated' saints assume that Buddha caused Ānanda or even the walls of the preaching-room to preach the Law (Kumārila in *Tantravārttika* has good jokes on this strange hypothesis; according to the Great Vehicle such wall-preaching is a case of *nairmāṇikī ṛddhi*). Elsewhere the organ of preaching is the smile of Śākyamuni, or the light that arises from his *ūrṇā* (white hair between the eyebrows). Elsewhere Śākyamuni is credited with having uttered a few words: each disciple heard them with the developments his own disposition allowed.

Together with the problem whose various solutions have just been expounded, and which centres round the Buddha and the Bodhisattva 'arrived at his last existence' (*sannikṛṣṭa bodhisattva*), there is another, almost as important, concerning the Bodhisattva during the course of his long career. Is he a 'saint' or an 'ordinary man'? Legend supplies contradictory and confused answers.

According to the Introduction to the *Jātaka*, it is only after having acquired arhat-ship, *i.e.* the right of entering nirvāṇa at his next death, that Sumedha (the future Śākyamuni) conceives the idea of becoming Buddha. The quality of Bodhisattva is in his case somehow grafted on to the quality of Arhat. Without examining how far this is compatible with the conquest of arhat-ship which Śākyamuni, born as an ordinary mortal, will once more make under the Bodhi tree, we see that Buddhists inquired if all the accounts concerning the previous existences of Śākyamuni are compatible with the possession of sainthood. Assuming that the concept of Bodhisattva ought to be brought within the framework of the doctrine of the path to sainthood, Buddhists further asked whether a Bodhisattva is necessarily a saint (*ārya*), or whether he remains, at least at the beginning of his career, an ordinary man (*pṛthagjana*), what grade he occupies in sainthood, *srotaāpatti*, the first, or arhatship, the fourth grade, and at what time he attains to those grades.

The Great Vehicle has answers to these questions, and to many others subsidiary to them (see III.). The Little Vehicle, besides the evidence of the Mahāsāṅghikas (see *ib.*) supplies only a few documents sufficiently detailed on the nature of the future Buddhas, but they are late. All the Bodhisattvas who have taken the vow to become Buddhas 'are exempt from births in the *avichi*, with the ghosts (*pretas*), among the lower animals; in their human births they possess all the organs of the senses; they are neither women nor eunuchs; they are never guilty of mortal sin; they do not lose sight of the doctrine of action and its fruits; in their divine births they are never insentient gods, etc.; bent upon renunciation, with no attachment to existence or non-existence, they walk as acting for the world's welfare, fulfilling all the perfect virtues.'‡

This passage denies that the Bodhisattvas who have taken

* These heretics are, according to the commentary, the Vetulyakas. Minayeff has noticed that this sect is much later than the traditional but disputable date of the *Kathāvatthu* (B.C. 246). On Vetulyakas and the Great Vehicle, see *JRAS*, 1907, p. 432.

† See p. 745ª.

‡ *Jātaka*, Introd. vv. 252–258, quoted by Kern, *Man.* 67, n. 9.

the vow can be guilty of mortal sin,* or that they can deny the law of the retribution of actions, and thus destroy their 'root of merit'; but it admits that they can be guilty of sins entailing evil destinies, *e.g.* re-birth into the wombs of higher animals, and probably into certain kinds of hells.† The same impression is given us by the short and contradictory notices which we possess concerning the Haimavatas.‡ They hold that the Bodhisattvas are *pṛthagjanas* whose most notable characteristic is freedom from the spirit of malice or wickedness (*abhidhyāchitta*); but are not exempt from error (*moha*) or desire (*rāga*). The Sautrāntikas were undoubtedly of the same opinion (Wass. 276, *ad finem*). Tradition, in fact, was very clear about the animal existences of the Bodhisattva and the various sins he had committed during the course of his existences.§ These, it is true, may be explained without admitting the idea of any imperfection. This is undoubtedly what is done by the Mahāsāṅghikas. 'The Bodhisattvas,' they say, 'are free from desire and malice (*vyāpāda*, *viheṭhana*); whenever they choose, they are born in lower forms of existence for the benefit of creatures' (Wass. 237 [260]; cf. Rockhill, 188). The climax of this method of interpretation with a religious tendency is found in the Mahāyāna literature. There we see the Bodhisattvas 'rushing into the Avichi like swans into a lotus pond.'‖ And why? To save creatures; because the future Buddhas in the fervour of their compassion have taken upon themselves 'the whole burden of the suffering of all creatures'; because they have declared, 'I am taking upon my body the heap of sorrows which their deeds have accumulated, in order to bear it in the regions of hell. Would that all creatures who dwell there might escape.'¶

It is not difficult, however, to reconcile these antinomies. All that is needed is the recognition of two kinds of Bodhisattvas. The legends in which the future Buddha appears in an animal form, etc., belong to the initial stage of his career. The lofty deeds of generosity, the sacrifice of life, etc., belong to a period during which he heroically practised the virtues. Finally, when Bodhisattvas are described as playing the part of a universal providence, and reigning in Paradise, like Avalokita (see art. AVALOKITEŚVARA), the reference is to future Buddhas who have almost attained Bodhi and have gained very high 'spheres' or 'stages.'

III. BHŪMIS, OR STAGES IN THE CAREER OF THE BODHISATTVA.**—The scheme of the Bodhisattva's career is modelled on that of the career of the *śrāvaka*, or disciple of the Little Vehicle.

We are expressly informed about this in various sources.†† The Śrāvaka, after receiving instruction from the Buddha, labours long before attaining, after sixteen successive victories over the passions, the first stage or first 'storey' (*bhūmi*)‡‡ of the way (*mārga*), namely, the position of *srotaāpanna* (=he who has entered the course). Thence he ascends to the states of *sakṛdāgāmin*, *anāgāmin*, and lastly *arhat*. According to another account, there are eight stages: the *srotaāpanna* who possesses the 'fruit' of entrance into the course is distinguished from the *pratipannaka*, or candidate qualified for this fruit,

* The Mahāsāṅghikas assert the same thing of the *srotaāpanna*, Wassilieff, 240 (264).

† See *Madhyamakāvatāra*, 89, 7, on animal births, births in hell, etc., of persons who practise charity but violate the 'Pentalogue.' Cf. below, p. 744ᵇ.

‡ According to Vasumitra (Wass. 278); Bhavya ascribes different doctrines to them (Rockhill, 190).

§ On the animal births of the Bodhisattva, from the dogmatic point of view, see *Kathāvatthu*, xxiii. 3, *Jātakamālā*, xxxiii. 3, and sources quoted by Hopkins, *JAOS*, 1906, p. 464; Wassilieff, p. 168. According to *Sūtrālaṅkāra*, as long as the future Buddha has not acquired a 'stage' (see below, p. 746ª), his re-births are fixed by his acts, good or bad (*kammavasena*). Afterwards he is re-born according to his 'vows' (*praṇidhāna*) for the welfare of beings. At the end, his re-births are only apparent (*vibhutvādhipatyena . . . upapatti*). In Grünwedel, *Myth.* p. 199, statistics will be found of the various re-births of the Bodhisattva Śākyamuni according to the *Jātakas*. He was three times a Chaṇḍāla, once a dice-player, once a jackal, etc. A Bodhisattva cannot be a woman: 'At the same instant . . . the female sex of the daughter of Sāgara disappeared; the male sex appeared and she manifested herself as a Bodhisattva' (*Lotus*, Kern, p. 253; but see p. 257; *Si-do-in-dzou*, p. 123, etc.). In the Pāli Jātaka, the Bodhisattva is never a female; but that this rule is modern is proved by the sculptures of Bhārhut (see Foucher, *Les représentations des Jātakas*, p. 88).

‖ *Bodhicharyāvatārapañjikā*, p. 340, 13 (viii. 107), *Śikṣāsamuchchaya*, p. 360, 8.

¶ *Śikṣās*. p. 280.

** *Bhūmi*='stage,' or 'storey' (of a house), or 'category' (for instance, *Divyāvadāna*, p. 230. 28). The *Lotus* has once *dhāraṇī* =*bhūmi*, xvi. 3, see Kern, *ad loc.*, and the *Aṣṭasāhasrikā*, *dhātu*, *avinivartanīyadhātu*.

†† *Madhyamakāvatāra*, 13, 6; *Bodhisattvabhūmi*, II. iv.

‡‡ The term *bhūmi* is used in the Pāli *Abhidhamma* (see C. A. F. Rhys Davids, *Buddhist Psychology*, p. 82) as equivalent to *magga*, 'way.'

and so on. Consequently there are eight noble individuals (*āryapudgalas* or *mahāpuruṣapudgalas*). Moreover, scholastics regard the future *śrāvakas*, who are not yet qualified for the possession of fruit (let us style them *pratipannakas* to *srotaāpattipratipannakatva*, 'candidates for the first candidateship'), as belonging to a preliminary stage or *gotrabhūmi*. Although the Schools disagree on this point, the general opinion is that not only the *arhat* but also the *srotaāpanna* cannot fall from the stage which he occupies.*

The most ancient systematic doctrines concerning the career of the Bodhisattva seem to have been the following:—

There is a preliminary stage, during which he still, properly speaking, is only a 'future Bodhisattva,' and this is succeeded by three other stages.

(1) The preliminary stage is called *Prakṛticharyā*,† 'the period during which the innate qualities show themselves,' and which begins when the future Bodhisattva plants the roots of merit which later he will apply to the conquest of the Bodhi.

(2) The second stage is that of the Bodhisattva who for the first time conceives the thought of Bodhi (*prathamachittotpādika*), or 'who merely steps into the Vehicle' (of the Bodhisattvas; *prathamayānasamprasthita*), or again 'the beginner' (*ādikarmika*), 'who is eager to start on his journey' (*gantukāma*), but who has not yet set out.‡

(3) The Bodhisattva 'who follows out the practice or career of the Bodhisattvas' (*bodhisattvacharyāṁ charan*), who adopts a career 'in conformity with the vow' (*anulomacharyā*), 'who is on the march' (*gantṛ*), 'who is endowed with practice' (*charyāpratipanna*).

(4) The Bodhisattva who dwells 'in the stage from which there is no return'§ (*avinivartanīyā bhūmi*). It was at the beginning of this period (*anivartanacharyā*) that the future Śākyamuni received the prediction (*vyākaraṇa*) from Dīpaṅkara (*Mahāvastu*).‖

These and similar divisions, although they are known chiefly through the works of the Great Vehicle, contain nothing that is opposed to ancient ideas; they constitute merely an advance upon the views expounded by the commentator of the *Jātaka* (see above, p. 739). It seems to be otherwise with the 'stages of the Bodhisattva' as understood afterwards.¶ On the one hand, the teachers of the Great Vehicle sometimes regarded the doctrine of the *bhūmis* as their special right (*Madhyamakāvatāra*, p. 23); on the other, the Hīnayānists reproached their opponents with having invented the ten *bhūmis*. The latter, a Tibetan writer tells us, replied that a sect of the Little Vehicle, the Mahāsāṅghikas, possessed a book, the *Mahāvastu*, in which was set forth a theory of the ten *bhūmis* (Wass. 262 f.). On this point, as on several others, the School 'of the Great Assembly' seems to have become separated from the ancient sects and to mark the transition between the two Vehicles. Its *bhūmis*, however, are not the same as those of the Mahāyāna [all of which, being exempt from return, should be put under (4) of the above enumeration]. So far as we can judge, they present this characteristic, that the first seven are only a subdivision of '*charyās*' (2) and (3) of the preceding enumeration, the last three alone being exempt from 'return.'

The account of the *bhūmis* in the *Mahāvastu** seems to be independent of the authorities of the Great Vehicle, although it has some points of contact with the *Daśabhūmaka* and the *Lalitavistara*. Unfortunately, this account is confused, fragmentary, and perhaps contradictory. We possess on this point information supplied by Chandrakīrti, who, as we shall see, complicates rather than illuminates the problem. Reference should be made to E. Senart's analysis, from which we sometimes venture to differ.

The [future] Bodhisattva, who has not yet conceived the thought of the vow of Bodhi (*praṇidhichitta*), possesses the privilege that his sins are punished only during seven births, pain in the end being reduced to headache [*śīrṣaparitāpa*; cf. *Bodhicharyāv.* i. 21] (i. 104, 5). The first *bhūmi* is produced by the thought of Bodhi: 'May we become perfect Buddhas' (80, 5). This thought immediately destroys previous sins, literally, 'covers' them (104, 8; cf. *Bodhicharyāv.* i. 13). Nevertheless, the Bodhisattva of this stage and of the six following is an 'ordinary man' (102, 13 and 78, 11). He is regarded as an Ārya (*prāptaphala*), because his vow is not that of ordinary men (*prākṛtapuruṣa* = *pṛthagjana*, 80, 15);† but his works are mixed with good and evil (102, 9). In theory he does not encounter evil destinies; murder, theft, etc., do not lead him to hell. Nevertheless, should he deny the existence of the Āryas (*āryāpavāda*;‡ here it is chiefly Buddhas and Bodhisattvas that are concerned), he will be re-born in a 'particular hell' (*pratyekanaraka*) instead of being re-born in the Avīchi, in a Preta with a small body (as opposed to the Pretas with large bodies, who accordingly suffer more from hunger), or among the higher animals (as opposed to the *kṣudratiryagyoni*).§ He will never be an asura, or a woman, or a eunuch. But if he commits a mortal sin, the murder of a Bodhisattva, of a Śrāvaka (= Arhat), of a Srotaāpanna, or of a Pratyekabuddha, he will go to hell (102, 12–104, 3).

It is said that, for scholastically expounded reasons, such and such a Bodhisattva will never be able to pass from one *bhūmi* to the next. The Bodhisattvas destined to proceed uninterruptedly (*avaivartikadharma*) seem to be distinguished from the others, and perhaps the above-mentioned privileges are reserved for them.

From the beginning, however, of the eighth *bhūmi*,‖ the works of the Bodhisattvas are perfectly pure. 'They must be honoured with the worship rendered to the perfect Buddhas, they must be regarded as perfect Buddhas' (105, 13), for from this moment they cannot fall (*anivartiya*). They are Chakravartin kings; they teach the Law (107, 8). It is a curious fact that, whereas the names of the first seven *bhūmis* remain without any point of connexion in the literature, for the eighth we find *janmanideśa* (?), which recalls the *janmabhūmi*, 'birth-stage' of the *Daśabhūmaka* (*i.e.* where one chooses his birth-place); then, *yauvarājyabhūmi* (stage of the prince associated with the reigning sovereign), which is attested by the

* This is the most complicated problem of Buddhist scholasticism (see *Saṁyutta*, v. 360). Here it may be mentioned that the *Lotus* states that some Bodhisattvas will obtain Buddhahood after four, three, two births, or after one birth (xvi. 5 f., and Kern, *ad loc.*; there is confusion of the Bodhisattvas with the Śrāvakas).

† A term, derived from the *Mahāvastu*, corresponding to *gotrabhūmi* (see below, 745).

‡ According to the texts of the Great Vehicle quoted in *Śikṣāsamuchchaya*, 212, 12 and 313, 19; this stage corresponds to the *praṇidhānacharyā* of the *Mahāvastu*, and to the *adhimukticharyābhūmi* of *Bodhisattvabhūmi* and *Sūtrālaṅkāra*.

§ See especially *Aṣṭasāhasrikā prajñāpāramitā*, ch. xxii.

‖ Instead of 'career,' or 'stage without return,' the text, *Śikṣās.* 212, 12, has 'Bodhisattva possessing the *anutpattikadharmakṣānti*.' We shall see that it is necessary to attain the eighth *bhūmi* in order to possess this *kṣānti*, while all the *bhūmis* (including the first) are 'without return,' at least according to modern authorities (see below, 745a and 747).

¶ The idea which is contradictory to the Little Vehicle is not the subdivision of the Bodhisattva's career into several periods, but (1) the practical meaning of this teaching: everybody has to become a Bodhisattva; and (2) the nature attributed to the Bodhisattva 'dwelling in the *bhūmis*,' a kind of God-Providence, multiplying his various manifestations of form in all the universes, etc. The Bodhisattvas of the *Mahāvastu* do not appear to have this nature, even in the higher worlds (see next col., n. †, and p. 748a).

* See E. Senart's Introduction to the edition of the text (i. xxv f.), and A. Barth, *Journal des Savants*, 1899.

† The sentence, i. 78, 11, is very complicated: *prathamāyāṁ bhūmau bodhisattvāḥ pṛthagjanā iti prāptaphalā bhavanti iti dakṣiṇīyāś cha lokānāṁ virochenti*. E. Senart translates (p. 437): 'The Bodhisattvas who are in the first *bhūmi*, ordinary men though they were, secure the acquisition of fruits, and on that account become the object of the reverence of all people . . .' But he sums up (p. xxvii): 'The Bodhisattvas at this stage are still ordinary men.' And, with regard to the Bodhisattvas of the seventh *bhūmi*, we have (p. 102, 3) *sāmante pṛthagjanatāye*, which the present writer, like E. Senart (p. 457), understands to mean 'in consequence of their position as *pṛthagjanas*.' It would be necessary, therefore, to interpret the first passage (78, 11) thus: 'The Bodhisattvas are ordinary men, but they are worthy of the world's respect as if they were saints.' Unfortunately, Chandrakīrti (*Madhyamakavṛtti*, xxiv. 5) informs us that 'the scholars of the Madhyadeśa, following the arrangement of stages taught in the *Mahāvastu*, claim that the Bodhisattva dwelling in the first stage possesses the *darśanamārga*,' that is to say, has obtained the fruit of the *srotaāpatti*.

‡ The formula of the *Abhidharmakośa* is as follows: 'There are no Arhats in this world.' It implies a rejection of the True Law (*saddharmapratikṣepa*), and seems inseparable from the denial of the morality of actions and of their fruit: *nāsti dattam* . . . etc. See *Dīgha*, i. 55.

§ Cf. above, p. 743a.

‖ We are told (i. 105, 4) that the Jātakas, and the heroic charities too, refer to the eighth and following *bhūmis*. This is very strange.

Madhyamakāvatāra; and, finally, *abhiṣekabhūmi* (royal unction), examples of which are very numerous.*

The final attainment (*paripūraṇa*) of the tenth *bhūmi* results in the descent of the Bodhisattva, who now desires to become man (which will open to him the way to Buddhahood), into his mother's womb, and the prosecution of the well-known human career.

The close parallelism should be noticed between *Mahāvastu*, i. 142, and *Lalitavistara*, 86, 1–4. The remarkable difference is that, according to the latter text, the anointing allows the saint to 'show'† (*sandarśanatā*) his descent, birth, entrance into religion, . . . and the great nirvāṇa; whereas these nine exploits of the Buddha are regarded as real, and not apparent in the *Mahāvastu*, however *lokottaravādin* it claims to be.

In the system of the Mahāyāna or of the Pāramitās (*pāramitānaya*)‡ there is a very clear distinction between the first seven stages and the last three, but this distinction does not seem to be based on the same principle as that of the *Mahāvastu*. From the first '*bhūmi* of the Bodhisattvas' the future Buddha is assured of final success.§ Yet it seems almost certain that the Mahāyāna began with the conception of the *Mahāvastu* or one similar, for the eighth world in it bears the name of *Achalā* (immovable), 'because it cannot be removed,' or again (*Bodhisattvabhūmi*) that of *Niyatabhūmi*, 'world in which the faithful will surely (attain the state of Buddha).' Various notices lead us to believe that the possession of the *anutpattikakṣānti*,‖ which is the essence of the eighth stage, and produces the 'prediction' (*vyākaraṇa*), is not separable from the *avaivartikabhūmi* or *avinivartanīya*°, the 'stage without return.'¶

We are now able to follow the 'stages' in detail, as understood by the teachers of the Great Vehicle. The material may be subdivided into three heads: the future Bodhisattva, the first seven stages, and the last three stages.**

1. First Period: *The future Bodhisattva.*—We have seen that, according to the Introduction to the *Jātaka*, the future Śākyamuni was almost ripe for arhat-ship, when the sight of the Buddha Dīpaṅkara caused the thought of becoming Buddha to arise within him. It is after taking the vow of Bodhi that he examines the virtues necessary to a Buddha. All this is rather poor psychology; for nothing is more opposed to the career of the Bodhisattva than the state of mind of an Arhat, isolated from everything, from his neighbour as from himself. The future Buddhas, let us rather say, are recruited from men who have not entered the path of the Arhats, and whose spiritual temperament is not yet determined (*aniyatagotra*).††

* This consecration evidently takes place in the Tuṣita heaven, for there are certain qualities which the Bodhisattva does not possess until 'after the Tuṣita' (see *Mahāvastu*, i. p. xxxvi).

† See above, p. 743a, and below, p. 747a, n. ‡.

‡ Also in the Tantras (*mantranaya* in contrast to *pāramitānaya*).

§ The Bodhisattva 'who has attained a stage' is contrasted with the one who is tossed about in the *saṁsāra*, lifted up by the thought of Bodhi, held down by his sins (*Bodhicharyāv.* iv. 11). Nevertheless Chandrakīrti (*Madhyamakāvatāra*, 51) seems to foresee that a predestined Bodhisattva (*niyata*, see p. 739b, n. †) may indulge in an angry thought. In the present writer's opinion the passage should be interpreted thus: 'And if, *to suppose what is against all probability*, a predestined bodhisattva should happen to produce an angry thought.'

‖ See p. 744a, n. ‖.

¶ *Lalitavistara*, 35, l. 21, and *Śikṣās.* 318, 19, compared with *Aṣṭasāhasrikā*, 60.

** Authorities.—(1) *Aṣṭasāhasrikā prajñāpāramitā*, xvii ff. (2) *Daśabhūmaka*, or *Daśabhūmika sūtra*, of which there exists a recension, augmented by Prākrit verses, called the *Daśabhūmīśvara*, one of the nine Dharmas of the Nepālese literature. Numerous quotations by Śāntideva (*Śikṣās.*), Prajñākaramati, etc., show the importance of this book, which seems to have been translated into Chinese A.D. 205–316. [See Nanjio, 105, 110.] It is utilized by (3) the *Bodhisattvabhūmi*, a text-book of the Yogāchāra (or Vijñānavādin) school, (4) the *Madhyamakāvatāra*, a work of Chandrakīrti the Mādhyamika teacher (see p. 748), (5) the *Sūtrālaṅkāra* of Maitreya-Asaṅga.

†† See *Aṣṭasāhasrikā prajñāpāramitā*, p. 33, 17, *ye tv avakrāntāḥ samyaktvaniyāmaṁ na te bhavyā anuttarāyāṁ samyaksambodhau chittam utpādayitum*, 'Persons who have entered "ascertainment to arhat-ship" [more accurately "the state undoubtedly leading to *srotaāpatti*"] cannot produce the thought of becoming Buddhas; . . . nevertheless I joyfully approve them if they come to produce such thought.' It is noteworthy that the *Prajñāpāramitā* uses the phrase *samyaktvaniyāma* just as the Nikāyas do (see *Saṁyutta*, Index, p. 54), and contrasts it with *bodhisattvaniyāma* (p. 322, 5). On *niyāma*, see p. 746a, n. *, p. 747b, n. *, and Wogihara on Bodhisattvabhūmi.

These men do not, however, immediately decide, for the sake of the welfare of creatures, for their temporal happiness and their salvation in nirvāṇa, to make the very great sacrifices that the career of a Bodhisattva entails. Therefore, before taking the vow of Bodhi, a period unduly called a '*bhūmi*' passes, which is preparatory (*parikarma*°, *upachārabhūmi*) to the Bodhisattvabhūmis, and is subdivided into *gotrabhūmi* and *adhimukticharyābhūmi*.*

(1) *Gotrabhūmi*† is a stage of preparation (*Laṅkāv.* 68, 6). Just as, even in the egg, the embryo which is to become the wonderful bird Garuḍa differs from all other birds in the embryonic state, so the future Bodhisattva (*bhaviṣyad*°) belongs, even before his spiritual birth, to the family (*gotra*) of the Bodhisattvas. He possesses a certain 'disposition' which predisposes him to the vow of Bodhi. He possesses certain innate (*i.e.* acquired during the course of former existences) qualities (*prakṛti*°) which incline him to compassion; for compassion is the essential element in the vow of Bodhi. He is kind and good (*bhadra*). Incapable of committing a mortal sin (for these are, above all, sins of hatred),‡ he avoids also the heresies which would condemn him for eternity;§ but he commits sins of love (*rāga*). Everyday experience, in fact, shows numerous examples of good and generous men forgetting themselves, *e.g.* in passion. These men, although ignorant and guilty, belong to the race of Bodhisattvas.

(2) *Adhimukticharyābhūmi*.—The dispositions of which we have been speaking bear their natural fruits in the Buddhist disciple. His enthusiasm is not for the egotistical calm of the Arhat, but for the generous goodness of the Buddha. In him are born 'aspirations' (*adhimukti*) towards the state of Buddha. In him, if we prefer to put it thus, is born the thought of Bodhi (*bodhichittotpāda*); but this thought is only in germ, in the state of seed, of cause (*hetubhūta*); there is nothing to show that it will ripen. Among a thousand persons who possess it at this state, says the *Aṣṭasāhasrikā* (61, 9), are there two, is there even a single one, who will carry it to maturity? A person thinks of becoming Buddha (*a*) because some preacher invites him, or (*b*) because he hears Buddhahood praised, or (*c*) because he thinks of the miraculous body of Buddha, or (*d*) because he has compassion for creatures (*Śikṣās.* 8, 8). This last motive alone is pure; but, even when it is predominant, it is one thing to begin the vow of Bodhi, another to carry it out (*ārabdha*, *pratilabdha*). The good thoughts (*adhimukti*, *adhimokṣa*, *adhyāśaya*) of the disciple are like arrows shot forth in the darkness, which have very little chance of hitting the mark. His good works are few in number (*parīttakarin*), full of omissions and imperfections (*chhidrakarin*), casual and unregulated (*aniyatakarin*). He has to reflect and wish (*pratisaṅkhyāna*) in order to do good. He is called 'Bodhisattva mounted on a chariot drawn by oxen' (*paśurathagatika*), to indicate the slowness and uncertainty of his success (*Śikṣās.* 7, 1). His unconstrained love is given to himself; it is only by reflexion that he cares for the welfare of others. His nature leaves him at the mercy of his inclinations. His knowledge of truth (*prajñā*) is slight, and derived entirely from listening to the Law and from reflexion: the direct penetrating sight of meditation (*bhāvanā*) is entirely wanting in him. Nevertheless, by the repetition of 'aspirations,' and by more and more studious practice of the good works which they involve, the disciple, during three periods, succeeds in purifying these very aspirations (which will henceforth be called *adhyāśayas*), and, when they are pure, he rises from the *adhimukticharyā* stage to enter the stage 'where aspirations are pure' (*śuddhādhyāśaya*).‖ See, however, p. 747a.

2. Second Period: *The first seven stages of the Bodhisattvas.*—The stage called *śuddhāśayabhūmi* (or *śuddhādhyāśaya*°), and more commonly the 'Joyful' (*pramuditā*), is, properly speaking, the first *bhūmi* of the Bodhisattvas. (Until now the disciple was only a future Bodhisattva.) It is also the first in the classical list of the ten *bhūmis*. We shall see that it does not

* This is the account of the *Bodhisattvabhūmi*, but there is no doubt that the Mādhyamikas recognized these distinctions. See *Śikṣāsamuchchaya*, vii. 8, viii. 8; *Madhyamakāvatāra*, 13. 12.

† The Little Vehicle also knows of a *śrāvakagotra*, 'having the disposition of a future arhat.' Here *gotrabhūmi* = *bodhisattva-gotrabhūmi*.

‡ Cf. below, p. 751b. The *Mahāvastu* seems to admit mortal sin in the Bodhisattva; see p. 744b.

§ Heresy which destroys the root of merit, the denial of the fruit of actions (see art. KARMA). See p. 744b, n. ‡.

‖ To complete this description it would be necessary to interpret and comment *Mahāvyutpatti*, § 32.

differ from the *anivartanīyabhūmi*, 'the stage from which there is no "return,"' which was discussed above. It is in the 'Joyful stage,' according to a prediction of Buddha, that Ānanda is to be re-born under the name of Nāgārjuna, the founder of the Great Vehicle.

The 'Joyful stage' corresponds to what is called in the Little Vehicle the 'first fruit': the disciple is now no longer an 'ordinary man' (*pṛthagjana*, *prākṛtapuruṣa*) but a saint (*ārya*), one of the elect (*niyāmāvakrānta*); * for, having brought 'worldly' (*laukika*) meditations (*dhyāna*) to their perfection, he has entered the 'supernatural' career (*lokottaragati*). He is a 'graded Bodhisattva' (*bhūmisthita*), or, more correctly, he is a true Bodhisattva (*paramārthabodhisattva*), and he will certainly become a Buddha. He already possesses in a high degree all the qualities which will develop in the subsequent periods.

The description of this first stage, borrowed by the *Bodhisattvabhūmi* from the *Daśabhūmikasūtra*, is developed according to a scheme which recurs in all the succeeding stages. We give it in detail so that its scholastic character may be noted.

(1) The 'stage' is produced, in a soul whose intentions or aspirations are pure, by the 'formation of the thought of Bodhi' (*chittotpāda*)—a thought which is the pure expression of charity (*dānapāramitā*) or of compassion (*karuṇā*). The thought of Bodhi is here 'absolutely fixed,' and is thus distinguished from the thought as it exists in the preparatory stage. Entirely personal and sincere, the result of meditation (*bhāvanā*), *i.e.* resting on an intuitive view of truth, it consists of the vow of the Bodhisattvas in all the fullness of disinterested generosity—a vow which will never be abandoned or altered under any circumstances, and which will have Bodhi as its end, embracing as it does all the intellectual qualities of the Perfect Buddhas and all the works which they are to accomplish.

Destined to Buddhahood (*sambodhiparāyaṇa*),† the disciple realizes that he is 'born into the family of the Buddha,' and his joy knows no bounds; joy of affection for the Buddhas who have begotten him to this spiritual birth, joy in the feeling that he is devoting himself to the realization of the task of the future Buddhas, and joy in his goodwill towards all creatures.

For him the five terrors (*bhaya*)—terror relative to the necessities of life, to an evil reputation, to death, to unhappy re-births, and to the 'assemblies'—disappear. As he has 'produced' the vow that the sins of all creatures should 'ripen' in him (*ātmavaipākya*), *i.e.* wishing to bear the burden of the sins of others in the hells and elsewhere, he is henceforward free from all evil re-birth. Knowing that there is no one better than he in this world, no one who is even his equal, why should he be afraid of meeting any 'assembly' whatever?

(2) He binds himself by the 'great resolves,' which are independent of limitations of time or space (*mahāpraṇidhāna*),‡ and purifies them: to render homage to the Buddhas; to preserve and preach their Law; to ascend to the 'great nirvāṇa,' after having performed all the works of a Buddha since his descent from the Tuṣita; to produce thoughts for the purification of all the 'stages' and the fulfilment of all the perfect virtues in order to that end; to ripen all creatures for Buddhahood; to pass through all the universes for the purpose of listening to the Buddhas there; to purify all the 'fields of Buddha' (that is to say, to make of them so many Sukhāvatīs); to enter the Great Vehicle; to act and preach for the salvation of beings with full success and without error; without abandoning for an instant his own path, to exhibit the birth as a *pṛthagjana*, the entrance into the religious life, the miracles, the conquest of Bodhi, the putting of the law into motion, and the great complete nirvāṇa.*

(3)–(4) The disciple possesses ten qualities 'which purify the stage in which he dwells,' and 'which purify the ten stages.' Becoming more and more perfect, they enable him to ascend from stage to stage: faith, compassion, affection or goodwill, generosity or disinterestedness, indefatigability, acquaintance with the doctrinal books (worldly and Buddhist), knowledge of the world (or of men), modesty in a two-fold form (reverence for self and reverence for others), power and endurance, and the worship of the Buddhas.

(5) Enjoying the sight of the Buddhas described in the *Bodhisattvapiṭaka* (see MAHĀYĀNA), and, in general, of all the Buddhas of every region,—this because of (*a*) the strength of his loving faith, and (*b*) the resolution, made by these Buddhas when they were Bodhisattvas, that they would be visible—he worships these Buddhas, listens to the Law, practises the Law, applies his merits to the acquisition of Buddhahood, and 'ripens' creatures for Bodhi by means of the 'elements of popularity' (*saṅgrahavastu*, see pp. 741ᵃ, 750ᵃ). All his actions are called 'purifiers of the roots of merit.'

(6) While he dwells in this stage the Bodhisattva is, in all his births, a 'sovereign king of a continent.' Deprived of all egoism, he frees all creatures from egoism.†

(7) Power.‡—Whatever act he undertakes, it is in order to reconcile creatures to himself, and always with thoughts connected with the Buddha, his Law, and his Order; it is always with the thought: 'May I become the first of beings (*i.e.* a Buddha), in order that every creature may have recourse to me for every good.' And all his undertakings succeed. He has the energy required § to leave wife and belongings, to enter on the religious path, and, having entered,§ to conquer a hundred Bodhisattva-trances every second, to perceive a

* The murder of a *niyāmāvakrānta* is a capital sin (*ānantarya*); see *Mahāvyutpatti*, 123. 3: *niyatabhūmisthitasya bodhisattvasya māraṇam*, and cf. on the same topic *Abhidharmakośav.* which has *niyatipatita bodhisattva* (MS. As. Soc. fol. 331*a*). As observed on p. 745ᵃ, the eighth stage is sometimes called *niyatabhūmi*; but, according to the gloss, the reference is to the third *niyati* (see p. 747ᵇ, n. *). Discrepancies in sacred books as to the stage which confers *niyāma* (*niyati*), 'predestination to Buddhahood,' led the scholastics to specify different kinds of 'assured psychological progresses.' The *niyāma* of the 8th stage confers assurance of obtaining and never losing *anābhogatā* and *anutpattikadharmakṣānti* (see below, p. 747ᵇ); it is the 6th *niyatipāta* of *Sūtrālaṅkāra*, xix. 38.

† This phrase occurs in the Nikāyas (see *Saṁyutta*, Index) and in Aśoka's edicts (see Senart, i. 182, 186, ii. 223). Here, as observed by Prof. Rhys Davids, *Dialogues*, i. 190, *sambodhi* = arhat-ship, and nothing more. On the *vyākaraṇa*, 'prediction,' that the future Arhat gives to himself, see *Saṁyutta*, v. 359.

‡ The *praṇidhānas* are innumerable. They are summed up in the ten great ones (*mahā°*), which are all included in the *samantabhadra°*, 'universally propitious resolve.' On the *praṇidhāna*, its subdivisions and its virtues, see *Dharmasaṅgraha* cxii., *Bodhicharyāvatāra*, ix. 36.

* This somewhat incoherent list of 'resolves' is cited in *Śikṣās.* 291, 11 f., and summed up in the *Bodhisattvabhūmi*. The last 'resolve' shows that the Mahāyānists did not believe in the *reality* of the 'Bodhisattvas in their last existence.' If the present writer's interpretation of the text *Śikṣās.* 295, 5 is correct, it shows also that Śākyamuni was believed to have been born as a *bāla*, 'an ignorant person,' 'a fool.'

† In the subsequent stages the Bodhisattva is successively sovereign king of the four continents, Śakra, Suyāma, Santuṣita (a variant of the word Tuṣita, common in the ancient literature), Sunirmitavaśavartin. . . . To each stage corresponds a certain virtue which the Bodhisattva makes prevalent in the more and more wide-spread kingdom in which he reigns. These virtues are successively the *pāramitās* (see below, p. 748).

‡ The description of the *prabhāva*, or 'power,' of the Bodhisattva is the same in the succeeding worlds, except that the numbers increase. In the *Daśabhūmaka* we find the series 100, 1000, 100,000, 100 koṭis (koṭi = 10,000,000), 1000 koṭis, 100,000 koṭis, 100,000 nayutas of koṭis (nayuta = 100,000 koṭis of koṭis), the number of the atoms in a hundred thousand times ten great universes, etc. The *Bodhisattvabhūmi* is more moderate, but it gives numbers only for the first seven worlds, 100, 1000, 100,000, 10,000,000, or a koṭi, 100 koṭis, 1000 koṭis, 100,000 koṭis.

§ This clause is wanting in the description of the higher *bhūmis*.

hundred Buddhas, to know the magical beings that these Buddhas animate and the blessing they shower on the Bodhisattvas, to make a hundred universes tremble, to go to these in his bodily form or to enlighten them by his brilliance, to display them to creatures, to ripen a hundred creatures for Bodhi (by means of a hundred magical beings),* to live for 100 *kalpas*, or ages of the world (if he chooses),* to know a hundred *kalpas* in the past and the future, to comprehend (or accumulate, *pravichinoti*) a 'hundred mouths of the Law' (*dharmamukha*),† and to show a hundred bodies ‡ (magical bodies of Buddhas), each of them surrounded by a hundred Bodhisattvas.

This last description, which the technical literature of the Yogāchāras (*Bodhisattvabhūmi*) borrows from the *Daśabhūmaka*, is represented in the *Madhyamakāvatāra* (a Mādhyamika book) only by a single sentence: 'The Bodhisattva, in the first stage, can make a hundred universes tremble'; but this sentence implies the rest. According to the two schools of the Great Vehicle, every 'graded' Bodhisattva is a very great magician.

The passage from one *bhūmi* to the following (*bhūmer bhūmyantarasaṅkramaṇa*; see *Lalita*, 35, 22) takes place in accordance with a scheme which is always the same. Each 'stage' consists essentially in the development of ten certain qualities—the perfection, the complete realization (*paripūrṇatva*, *prakarṣagamana*) of which constitutes the beginning of the next stage, and gives rise to ten new qualities, at first very weak, whose perfect maturity will constitute a third stage, and so on.

For this reason, there are ten 'right dispositions' (*samyagāśayas*) in the first stage (1. not contradicting the teachers, *gurus*, etc., 2. living on good terms with the Bodhisattvas who are experiencing the same stage, 3. remaining master of one's thought by subduing passions and temptations, etc.) which, being infinitely pure, enable him to pass into the second stage, or rather constitute the second stage. The latter is termed 'the world of the Bodhisattvas whose dispositions are pure' (*śuddhādhyāśaya*).

There are ten 'applications of the mind to the intellectual dispositions' (*chittāśayamanaskāra*) which realise the third world, ten 'entrances into the sight of *dharma*' (*dharmālokapraveśa*; cf. the *dharmālokamukha* of the *Lalita*) for the fourth, ten 'equalities of pure dispositions' (*viśuddhāśayasamatā*) for the fifth, ten 'equalities of the Law' (*dharmasamatā*) for the sixth, ten 'excellent beginnings of a new way nourished by learning and skill in the means' (*upāyaprajñābhinirhṛtamārgāntarārambhaviśeṣa*) which cause him to pass into the seventh, which consists in the culture of ten 'sciences introductory to the real truth' (*paramārthāvatārajñāna*).

But although these *bhūmis* are more and more rich in qualities and knowledge, they are all essentially the thought of Bodhi.

The first seven stages together constitute the 'active' career of the Bodhisattva, during which he exercises himself, and his acts imply movement and intellectual work (*prāyogikacharyā*, *sābhoga°*, *sābhisaṁskāra°*). § The seventh marks the completion of this career, and the preparation for passing into the career which is free from movement and 'intellectuation,' the so-called career of knowledge and supernatural virtues (*jñānābhijñācharyā*; cf. *Lalita*, 35, 5).

The *Bodhisattvabhūmi*, utilizing in other respects the data of the *Daśabhūmaka*, but organizing them according to a well-known scheme of the Little Vehicle (cf. the *Visuddhimagga*), establishes the following distribution: Stages i.–vii. constitute the *charyāpratipattibhūmi*, 'stage of exercise.'

Second stage. The Immaculate (*vimalā*). Practice of Morality (*adhiśīla*).

Third stage. The Illuminating (*prabhākarī*). Reflexion (*adhichitta*).

Fourth stage. The Radiant (*archiṣmatī*). Knowledge (*adhiprajñā*), first part: cultivation (*i.e.* meditation) of the *bodhipakṣya dharmas*.

Fifth stage. The Invincible (*sudurjayā*). Knowledge, second part: cultivation of the noble truths (*satya*).

* The words in parentheses are wanting in the *Daśabhūmaka*.

† The same as the well-known *dharmālokamukha* (*Lalita*, p. 31, Kern, i. 406). See next note.

‡ 'To show a hundred bodies,' the phrase of the *Daśabhūmaka*, is replaced in the *Bodhisattvabhūmi* by the words: *skandhadhātvāyatanādikānāṁ dharmamukhānāṁ kāyaśatam darśayati* (?).

§ The phrase *avabhāsabhūmi* (*Laṅkāvatāra*, 68. 6) possibly refers to the first seven stages.

Sixth stage. The Turned towards (*abhimukhī*). Knowledge, third part: cultivation of dependent origination (*pratītyasamutpāda*).

Seventh stage. The Far-going (*dūraṅgamā*), which sums up the six preceding stages, and includes especially the fruits of the sixth, the full development of the intelligence of the Bodhisattvas (*bodhisattvabuddhivichāra*), the complete absence of regard for the particular (*nirnimitta*), and the constant possession of meditation of annihilation (*nirodhasamāpatti*). Now the Bodhisattva dwells at the apex of existence (*bhūtakoṭivihāra*), but he does not realize annihilation (*nirodhaṁ sākṣātkaroti*). And yet, just as a Chakravartin king, although unsoiled by humanity, is nevertheless a man and not a god (Brahmā), so he has not yet escaped from the domain of passion (*kleśa*). Desire, in connexion with the consciousness he has of his actions (*abhisaṁskāra*), and with 'the act of turning oneself' (*ābhoga*) towards an object, has not yet passed away. He is not subject to passion (*na sakleśaḥ*) in the sense that any passion whatsoever would work in him; he is not free from passion (*na niḥkleśaḥ*) because he desires the knowledge of a Buddha, and because his intentions (of universal salvation) are not fulfilled.

Nevertheless, being in possession of the perfect qualities of Bodhisattvas, he is superior to the Arhats and the Pratyekabuddhas. Above him there are only the Bodhisattvas of higher worlds and the Perfect Buddhas.

The intentions or aspirations (*adhimukti*) of the Bodhisattva, even when he is only on the threshold of his course (*ādikarmika*), are pregnant with the Bodhi and the salvation of all beings. Therefore he is very much superior to the Arhats and the Pratyekabuddhas. These, however, are in enjoyment not only of freedom from desire (*vītarāgatva*), but also of lofty intellectual attainments. Therefore, during the first six *bhūmis*, the Bodhisattva is inferior to them. From this point of view, he surpasses them only on entering the seventh stage. Such is the teaching of the *Maitreyavimokṣa* and the *Daśabhūmaka* (*Madhyamakāvatāra*, 18–20).

3. Third Period: *The last three stages of the Bodhisattvas.*—The eighth 'stage' is called the Steadfast, or rather the Immovable (*achalā*).* Its characteristic is the possession of that supreme virtue called the *anutpattikadharmakṣānti* ('upholding the doctrine of the non-production of things').†

The Bodhisattva is free not only from all *nimittagrahaṇa* ('particular and eager act of attention'), but also from all *ābhoga* ('turning towards, taking into consideration'). He is immovable. His actions, of body and of voice as much as of mind, are infinitely numerous, merciful, and fruitful, but are in a sense foreign to him, for the idea of duality, of being and non-being, of self and non-self, has perished for him; as also all movement (*samudāchāra*) connected with or belonging to the Buddhas, the Bodhisattvas, nirvāṇa, or the Arhats.

The Buddhas must also intervene to prevent such a Bodhisattva from entering nirvāṇa. They do so by virtue of the vow which they made formerly when they were Bodhisattvas, for since they have become Buddhas all activity has ceased for them. They remind the Bodhisattva of the eighth stage that his task is not accomplished, that he still needs many things in order to be a Buddha: 'Your "patience in the real truth" (*paramārthakṣānti*) in order to become Buddha is excellent; but you possess neither the ten powers

* Other names are: stage of the royal prince (*kumāra°*), stage without return (*anivartya*), stage of nirvāṇa, 'settled' stage (*niyatabhūmi*: *tasyāṁ tṛtīyaniyatipātapatito bhavati*; see p. 745ᵃ, and p. 746ᵃ, n. *). In iconography, Bodhisattvas always appear with royal ornaments. The title of Mañjuśrī, *Kumāra*, is well known.

† On this *kṣānti*, also called *paramārthakṣānti*, see below, p. 751.

nor the four abilities. . . . See how infinite are our bodies, our knowledge (*jñāna*), our kingdoms, our glory. You must acquire the same; you must appease those who are not appeased, convert those who are not converted,' etc.

It is for this reason that the Bodhisattva remains in existence. Without activity of body, voice, or mind, enjoying the ripe fruits of all his previous conduct, he develops marvellously. Formerly it was in his single body that he pursued the career of a Bodhisattva; now he multiplies (or divides) his body infinitely (*apramāṇakāyavibhakti*); he knows and surveys the whole universe.* He possesses the sovereignties (*vaśitā*), and ripens and blesses the creatures, etc.

The ninth stage, 'stage of the Good Ones' (*sādhumatī*), 'of the prince imperial' (*yauvarājya*),† is produced by the enthusiasm of the Bodhisattva, who is not content with the 'tranquil deliverances' (*śāntavimokṣāsantuṣṭi*), and who acquires the knowledge called *pratisaṁvid* (cf. *paṭisambhidā*), especially all that concerns the teaching of the Law (*pratibhāna*, see *Lalita*, 35, 19).

The tenth stage, 'Cloud of the Law,' is called also the 'stage of Consecration' (*abhiṣekabhūmi*) or 'stage of the Arrival at the End' (*niṣṭhāgamanabhūmi*). The Bodhisattva becomes worthy of the royalty of the Law, which will make him equal, or almost equal, with the Buddhas. He realizes the last of the *samādhis* ('contemplations'), that of 'the excellent consecration in omniscience' (*sarvajñānaviśeṣābhiṣeka*). The Buddhas consecrate him.‡ He acquires innumerable 'deliverances,' 'magical formulas,' or 'contemplations' (*dhāraṇīs*), supernatural powers. He receives the excellent rain of the True Law, and, having himself become a 'cloud of the Law,' he is sending upon creatures the good rain which lays the dust of passions and causes the growth of the harvest of merits; he is still a Bodhisattva, and renders homage to the Buddhas, as we see in the *Lotus of the True Law*; but, to use the strong expression of the *Bodhisattvabhūmi*, he is a Bodhisattva who has become Tathāgata (*tathāgatāś tathāgatabhūtāś cha bodhisattvāḥ . . . dharmam deśayanti*).

A word must be said in conclusion with regard to the stage of the Buddhas (*buddhabhūmi*) or 'the universal splendour' (*samantaprabhā*), or 'stage of non-appearance' (*nirābhāsa°*, *Laṅkāv.* 49), as opposed to the stages in which something is shown to the mind (*avabhāsa°*). It is beyond the scope of this article to examine the Buddhology of the Great Vehicle (see art. MAHĀYĀNA), but the question may be asked what is the difference between a Buddha and a Bodhisattva who has arrived at the end (*niṣṭhāgata*). We are assured that this difference is very great, but it is capable only of metaphorical expression. The knowledge of each of them is infinite in its aim and its methods, but the Buddha excels the Bodhisattva as a lamp of superlative brightness (*suviśuddha*) excels a bright lamp, as sight in broad daylight excels sight in semi-darkness, or even (and this seems to go further) as the newly-born child excels the embryo, etc. (*Bodhisattvabhūmi*, III. vi.).

The *Madhyamakāvatāra* of Chandrakīrti, the greatest Mādhyamika authority known to the present writer on this subject, gives a slightly different idea of the stages of the Bodhisattvas. Without claiming that the difference is a fundamental one—it is difficult to pass judgment upon such literature—we recapitulate here the information it contains, by way both of complement to, and of rectification of, the foregoing statement:

Chandrakīrti establishes an intimate connexion § between the *bhūmis* and the perfect virtues (*pāramitās*), which exist in all the 'stages,' but which assume predominance in turn.

(1) The Joyful stage (*pramuditā*) is the domain of charity (*dāna*)—charity, which, as we have seen, is not perfect until it is fertilized by knowledge of the void.

(2) The Immaculate stage (*vimalā*) is the domain of morality (*śīla*). The saint accumulates the 'ten good paths of action' infinitely pure—which is not the case in the preceding period. This purity consists especially in the absence of the conception of the ego. Belief in the ego, considering as real the abstention from murder, the person who abstains and the person who is not murdered, is the 'want of morality of those who practise morality.'

(3) In the Shining stage (*prabhākarī*) the Bodhisattva 'shines' by patience. Anger is the only evil that can in a moment destroy the merits accumulated during centuries. The saint acquires the four trances (*dhyāna*), the four 'immeasurables' (*apramāṇya*), and the five supernatural powers (*abhijñā*). He diminishes and reduces to nothing desire, hatred, and error, and triumphs over them in the world.

(4) The Radiant stage (*archiṣmatī*) is the domain of energy (*vīrya*) which helps towards the perfecting of good works, intellectual and moral, and especially towards application to the thirty-seven virtues connected with the Bodhi (*bodhipakṣikadharma*), and also the complete surrender of the idea of 'mine.'

(5) In the Invincible stage (*sudurjayā*) meditation or ecstasy (*samādhi*, *dhyāna*) predominates. The Bodhisattva, safe from demons, meditates on and understands the four noble truths (*ānulomikī kṣānti*), or, what comes to the same thing, relative truth and real truth (*saṁvṛti* and *paramārthasatya*) (see p. 751).

(6) The 'Turned towards' stage (*abhimukhī*), the domain in which *prajñā* (or knowledge) reigns, is thus named because the Bodhisattva, understanding 'dependent origination,' is turned towards the principles of the Perfect Buddhas. The *prajñā* predominates in him. He obtains the *nirodhasamāpatti* ('destruction-trance'), which was not possible before, on account of the non-predominance of the *prajñā* and the pre-eminence of charity, etc. Who then may be taught the profound doctrine of dependent origination, *i.e.* vacuity (*śūnyatā*), which alone gives a meaning to all other teaching? Those who, though they are 'ordinary men,' show sincere and profound enthusiasm on hearing of vacuity. In them there dwells in germ the intelligence of the Perfect Buddhas, and the love, which they will develop for this teaching that satisfies the mind so well, will be a pledge and a reason for morality, charity, patience, etc. The teaching will be imparted by a Bodhisattva arrived at the first stage, the Joyful world, or, more correctly, the teacher, in his interpretation of the Scripture, will be governed by the exegesis of Nāgārjuna, a Bodhisattva in the first stage.

(7) In the Far-going stage (*dūraṅgamā*), together with the perpetual 'ecstasy of annihilation,' there prevails the perfection of skill in the means (i.e. *upāyakauśalapāramitā*),* these means leading towards (i.) the acquisition of the Bodhi, (*a*) compassion, (*b*) knowledge of the elements of existence, (*c*) desire for Bodhi, (*d*) non-surrender of existence, (*e*) immaculate sojourn in existence, (*f*) burning energy; and (ii.) the 'ripening' of creatures, (*a*) making their insignificant roots of merit bear great fruit, (*b*) implanting in them great roots of merit, (*c*) removing all obstacles to the law of the Buddha, (*d*) enabling them to enter the Great Vehicle, (*e*) causing them to ripen in the Great Vehicle, and (*f*) leading them to deliverance.

(8) In the Immovable stage (*achalā*) predominates the virtue of resolves (*praṇidhānapāramitā*).† The Bodhisattva is no longer in the world of becoming (*saṁsāra*), but, by virtue of his sovereignty over things (*praṇidhānavaśitā*), he appears in the universe in various aspects. His resolves are perfectly pure, that is to say, the resolves which he has formed during the course of his active career all bear their fruit, as if he were really acting.

(9) In the Sādhumatī the Bodhisattva is called 'good' (*sādhu*). Development of the *balapāramitā* takes place, *i.e.* of the ten powers of a Buddha.

(10) In the 'Cloud of the Law' there is *jñānapāramitā*, excellence and predominance of the knowledge of a Buddha.

The *Sūtrālaṅkāra* (xviii. 47, see also xx. 10 f.) gives the following scheme:

(1) *Adhimukticharyābhūmi*.—*Sambhāra* (equipment, exertion, preparation) in order to enter a true *bhūmi*, to become a Bodhisattva.

(2) *Bhūmis* i.–vi.—*Sambhāra* towards *animittatva* (absence of particularized and eager attention), which is obtained in the

(3) viith *bhūmi*. There is *sambhāra* towards *anābhogatā* (absence of turning oneself), which is obtained in the

(4) viiith and ixth *bhūmis*. There is *sambhāra* towards *abhiṣeka* (consecration), which is obtained in the

(5) xth *bhūmi*. There is *sambhāra* to

(6) *Buddhabhūmi*, or *niṣṭhāgamana*, 'arriving at the goal.'

IV. SPIRITUAL LIFE OF THE BODHISATTVA, A FOLLOWER OF THE GREAT VEHICLE.—The question now presents itself: What is the connexion between the follower of the Great Vehicle who aspires to Buddhahood, but who is, properly speaking, only a future Bodhisattva residing in the *gotra* or *adhimukticharyā bhūmi*, and the real Bodhisattva in possession of one of the ten stages, and to what extent does the former participate in the 'perfect virtues'? The disciple, however humble he may be, must apply himself to the double task of merit

* Cf. the *adhikāriṇas* in *Vedānta*.

† And also *niyatacharyābhūmi*. *Yuvarāja*, 'heir-apparent associated with the reigning sovereign in the government' (Monier Williams).

‡ See vol. i. p. 96b. *Lalita* has *sarvajñajñānābhiṣeka*.

§ This connexion is pointed out in the *Daśabhūmaka*, but almost entirely neglected in the *Bodhisattvabhūmi*.

* The description is borrowed from the *Bodhisattvabhūmi*.

† See above, p. 748b, n. §.

and knowledge, in which are included all the virtues that make a Buddha. He participates directly and practically in the first seven 'stages,' being generous, moral, patient, energetic, meditative, studious of the doctrine, and skilled in the means to be employed in saving others. If the 'sovereignties' (*vaśitā*), the powers, and the knowledge of a Buddha are beyond his reach, he can always make a sort of imperfect imitation.

Śāntideva, a 7th century theologian, who is at the same time a writer of merit, has left a work entitled *Introduction to the Career of the Bodhi*, or *Introduction to the Practice of the Bodhisattvas*, in which, summing up some traditional doctrines and the speculations of his own time, he gives no place to ambitious theories, scholastic and mythological, regarding the 'stages.' Bodhisattvas in possession of stages, great Bodhisattvas (*bodhisattva mahāsattva* or *mahābodhisattva* or *daśabhūmīśvara bodhisattva*) intervene only as protecting and helpful saints. Grouped round the Buddha, they constitute the third 'jewel' (*ratna*), *i.e.* the Order (*saṅgha*) which, in the Little Vehicle, includes the whole of the monks. They are, therefore, closely associated with the Buddha and the Law, which are the first two 'jewels' in the formulas of homage and refuge. They fulfil an even more important part than the Buddha, being regarded as more merciful and more active. But, the more exalted they are, the less eager for the moment is the disciple to take his place beside them in the *bhūmis*. He is only a beginner (*ādikarmika*), subject to falls, uncertain of success, relying far more on the favour of the Buddhas and the Bodhisattvas than on his own powers and merits.

1. Initiation or conception of the thought of Bodhi.—Every disciple of the Mahāyāna aspires, by charity, to become a Buddha. He has to take the vow of Bodhi and assume the obligations and rule of life of the future Buddhas (*bodhisattvasaṁvara*). As if to mark more clearly the difference between the two Vehicles, he is not obliged, as are the followers of the Little Vehicle who are candidates for arhat-ship (*śrāvakayāna*), to enter monastic life. Legend informs us that the future Śākyamuni was often called 'householder' (*gṛhapati*), and Śākyamuni was in fact married. But there are Bodhisattvas who leave home (*pravrajita*) and add to the obligations of the Bodhisattvas the obligations of monks. These constitute a rule (*vinaya*), framed after the pattern of the Vinayas of the Little Vehicle, and will be discussed in art. MAHĀYĀNA (*bodhisattvaprātimokṣa*). Monks are more fit than the laity to practise certain virtues, less fit to practise certain others. Consequently the entrance into religion will depend upon the temperament and the merit acquired by the disciple. He must in some way have the 'vocation' in order to have the right to become a monk.

The disciple (1) reflects, either by himself or under the direction of a teacher, on the advantages of the vow of Bodhi, (2) performs pious works with a view to purifying his soul, and (3) undertakes the vow of Bodhi.

(1) 'The sin accumulated in my former existences, accumulated in all creatures, is infinite and omnipotent. By what power can it be conquered if not by the thought of Bodhi, by the desire to become Buddha for the salvation of men? This totally disinterested desire is infinitely sacred. It covers a multitude of sins. It assures happiness during the round of existences. It is a pledge of the supreme happiness of the Buddhas for one's self and one's neighbour. All honour to the Buddhas whom everybody quite naturally loves, and who have as their sole aim the salvation of men!'

(2) 'I worship the Buddhas and the Bodhisattvas in view of undertaking the vow of Bodhi (*vandanā*). Possessing nothing, by reason of my sins, how can I render unto them the worship (*pūjā*) which is their due? I beg them to accept this whole universe which I offer them in thought. But I am wrong, I do possess something, I give myself unreservedly, by pure affection, to the Buddhas and to their sons, the divine Bodhisattvas. I am their slave and, as such, have no more danger to fear. Of all dangers, the greatest is that which comes from my sins. I know how harmful these sins are, I deplore them, I acknowledge them (*pāpadeśanā*). I see and you see them as they are, pardon them!'

(3) 'But enough of myself. Let me belong entirely to the Buddhas and to creatures. I rejoice in the good actions which, among ordinary men, for a time prevent evil re-births. I rejoice in the deliverance gained by the arhats. I delight in the state of Buddha and Bodhisattva, possessed by the Protectors of the world (*puṇyānumodanā*). I entreat the Buddhas to preach the Law for the salvation of the world (*adhyeṣaṇā*). I entreat them to delay their entrance into nirvāṇa (*yāchanā*). All the merit acquired by my worship of the Buddhas, my taking of refuge, my confession of sins, etc., I apply to the good of creatures and to the attainment of the Bodhi. I wish to be bread for those who are hungry, drink for those who are thirsty (*pariṇāmanā*). I give myself, all that I am and shall be in my future existences, to creatures (*ātmabhāvaparityāga*). In the same dispositions as those in which the former Buddhas were when they undertook the vow of Bodhi, and just as they carried out the obligations of future Buddhas, practising in their order the perfect virtues, in these dispositions I conceive the thought of Bodhi for the salvation of the world, so also I shall practise in their order my obligations (*chittotpāda*, or vow, *praṇidhi*).'*

This, together with the necessary preliminaries, constitutes what is called the 'production of the thought' (*chittotpāda*, a shortened form of *bodhichittotpāda*). The *guru* solemnly declares, in presence of all the Buddhas and Bodhisattvas, that N. . . . has produced the thought and taken the vow. Now the disciple is a beginner (*ādikarmika*), a neophyte, 'a seed of Buddha,' 'a young shoot of Buddha' (*buddhabīja*, *buddhāṅkura*). Of course the 'production of thought' in question belongs to the domain of the *adhimukticharyā* (see above, p. 745[b]), and is only an imitation or a reduction of the all-pure 'production of thought' which constitutes the so-called 'Joyous stage.'

The series of pious deeds (*bhadracharyā* = 'auspicious practice') just mentioned (from 'adoration,' *vandanā*, to 'prayer,' *yāchanā*) forms not only 'the introduction to the path of the Bodhisattvas,' the entrance into the Vehicle which leads to Buddhahood, but also a daily ritual (*vidhi*), the daily food of the spiritual life, and, to express it technically, the triple element (*triskandha*) † which must be set in motion three times a day and three times a night: (1) confession of sins, with its preliminaries of adoration and worship, (2) acquiescence or rejoicing in good, and (3) prayer with a view to securing the preaching of the Law and delaying the entrance of the saints into nirvāṇa. The application of merits (*pariṇāmanā*) and the vow (*praṇidhi*) complete the ritual of worship (*pūjāvidhi*) which is called 'supreme worship' (*anuttarapūjā*), and is termed quintuple, sextuple, or decuple, according to the elements into which it is broken up.

2. Protection, growth, and purification of the thought of Bodhi.—The disciple has undertaken the thought of Bodhi; he must not lose it, but he must purify and increase it by exercise. He must add the practice (*charyā*) to the vow (*praṇidhi*). There is therefore a double duty which may be traced to a single principle: (*a*) vigilance on the thought of Bodhi (*bodhichittāpramāda*), and (*b*)

* These formulas of Śāntideva (*Bodhicharyāvatāra*) are well known. They recur in a more or less changed or abridged form in the *Dharmasaṅgraha* (see p. 3, note), in the *Svayambhūpurāṇa*, p. 117 f. (with some alterations in a monotheistic direction; see ĀDIBUDDHA), in some Tantras, e.g. *Chaṇḍamahāroṣaṇa*, iv. 5, in Nepālese manuals and anthologies like the *Ādikarmapradīpa* and the *Kriyāsamuchchaya* (MS Dev. 110, fol. 35; Foucher, *Iconographie*, ii. 8; see Poussin, *Études et Matériaux*, 106 and 226; and, on the Chinese authorities, Chavannes, 'Les Inscriptions chinoises de Bodh-Gayā,' *RHR* xxxvi. 1).

In the *Śikṣāsamuchchaya*, p. 290 f., Śāntideva gives information about his authorities, the most important being the *Bhadracharyā*, 'propitious practice,' a work in Gāthā dialect, which exists in the original, in Tibetan, and in Chinese (Nanjio, 1142; translated A.D. 746–771), then the *Akṣayamatisūtra* (Nanjio, 74; trans. A.D. 265–316), the *Ratnamegha* (A.D. 503), etc. It would be useful to trace in the literature of the Little Vehicle, at least the commentaries of Buddhaghoṣa on the 'taking of refuge' (*Sumaṅgalavil.* p. 231 f.), the first allurements of the Bhadracharyā. Apart from the thought of becoming Buddha, we find there what forms the essence of our ritual, viz. the offering of oneself to the Buddhas (*attasanniyyātana*). As regards confession of sins, the part it plays in ancient Buddhism is well known. In art. KARMA will be found an account of the part it takes in the remission of sins, according to the doctrines of the Great Vehicle.

† There are several works entitled *Triskandhaka*, 'work on the three elements.' One of them is devoted to the present subject (see Nanjio, 1090, trans. A.D. 590, *Bodhicharyāv.* v. 98–99, *Śikṣās.* 290, 1; Takakusu, *I-Tsing*, p. 76, note). Another treats of morality, devotion, and wisdom (cf. *Itivuttaka*, § 59, *Kandj. Mdo*, xxiii. 17). It is difficult to identify *Mahāvyut.* 65, 59.

continued watchfulness over mind and body (*samprajanya*).

(*a*) The Bodhisattva has bound himself by a formal promise in presence of the Buddhas and of all creatures. If he breaks this promise, he will lose himself, or, if he is saved, it is solely through the goodness of the Buddhas. Tossed about by the power of sin and by the thought of Bodhi, dragged downwards by the one, exalted by the other, he will require a long period before attaining to a Bodhisattva stage. Now is the time when he must make an effort, must avail himself of his birth as man, privileged, as by a miracle, to hear the preaching of the Law (which takes place in this world only at long intervals), endued with faith (*śraddhā*) which makes him able to exercise himself in well-doing, and possessed of a 'day of health' to enable him to avoid incurable diseases, *i.e.* sin. For the hells retain their prey a long time. If any one falls into them, as one continues to sin there, it is a miracle if he ever escapes. It is necessary, therefore, to fear hell (*saṁvega*), to wage a desperate warfare with the passions, and to observe the rules (*śikṣā*) of morality.

(*b*) But how can he keep the rules, if he does not keep watch over his fictile thought? Thought, like an elephant in rut, must be bound to the post of the Law by the memory of the Law (*smṛti*) and constant and careful watching (*samprajanya*). And the benefit of this mastery, of this taming of thought 'which goes where it is wished, and stops when it is wished,' is two-fold: not only will faults against morality be avoided, but power will be obtained to practise the perfect virtues, which are only thought, beginning with charity: the desire to give outweighs everything, even when no gift is actually possible, etc.

The disciple, being master of his thought, will be able to practise the perfect virtues (*pāramitā*), that is to say, the first six. Śāntideva does not concern himself with the virtues of *praṇidhāna*, *bala*, and *jñāna*, which belong actively only to the Bodhisattvas of the superior stages; his examination is restricted to generosity, morality, patience, energy, meditation, and knowledge.

The means or resource (*upāyakauśalya*) is nothing else than generosity, which aids the disciple to understand vacuity (*prajñā*), and the understanding of vacuity which helps him in the practice of giving, and enables him to conquer his passions. When he knows that nothing exists, he knows that sins are not sins. When he has the good of others in view, all sins are permissible (see *Śikṣās.*, 164, 16).

3. Virtue of giving (*dāna*) or compassion (*karuṇā*, *kṛpā*), or, if the term be preferred, of charity, is, as we have seen, the cardinal principle in the career of the Bodhisattva. If any one aspires to Buddhahood, and not to arhat-ship, it is because he thinks: 'My neighbour suffers his pain just as I suffer mine; why should I be anxious about myself, and not about him?'* The result is that the *dāna* whose highest expression is found in the 'production of the thought of Bodhi,' although it is the humblest of virtues,† is nevertheless the most important.‡

'The merciful man may commit sin, when, by the eye of knowledge, he perceives some advantage therein for his neighbour.' Not only ought meditation and the pious deeds of a meditative kind to be abandoned in order to practise charity; even the vow of chastity binding on monks, it is said, was violated by a certain Bodhisattva in his compassion for a woman. Compassion is therefore the great resource (*upāya*) in the sense that, every consideration whatever being laid aside, it saves the Bodhisattva from all dangers, and atones for all the faults of which he may be guilty.§ It is also the supreme means (*upāya*) of conciliating creatures (*saṅgrahavastu*), expressing itself in liberality, almsgiving, affability, and obligingness, and sharing the joy and the sorrow of others.‖ It is because he possesses this benevolence (*maitrī*), because he

* See *Bodhicharyāv.* vii. 90 f.

† Because, in principle at least, it is tainted with error and passion. It presupposes the belief in the existence of the person who has pity, of the person to whom something is given, and, lastly, of alms (see above, p. 740ᵇ). It also includes emotion and desire. From another point of view, generosity does not save a man from hell, as morality does, but it 'qualifies' re-birth. A 'moral' miser will be re-born as a man, but as a man miserable indeed; a generous sinner will be re-born as an animal, but as a noble animal, as an infernal being, but in a special and tolerable hell, etc.

‡ Pity is the only virtue to which he must apply himself. The others will follow of themselves. See *Āryadharmasaṅgīti*, quoted *ad Bodhicharyāv.* ix. 76.

§ See the important texts cited in *Śikṣāsamuchchaya*, 164, 8 f.

‖ See Kern, *Manual*, p. 67, and above, p. 741ᵃ and n. †.

makes use of it to convert the creatures, that the Bodhisattva deserves to be called by that name (*Bodhisattvabhūmi*, I. viii.). But whatever the virtue of generosity may be, it must not stand in the way of its aim, must not be unreasonable or excessive (*atityāga*). It is especially after he has conquered a stage that the Bodhisattva is able to be useful to creatures, and his charities must not form an obstacle to his spiritual career, unless it be to help some Bodhisattva more capable of benefiting beings than he is himself. Moreover, there is a gradation among gifts: to give one's flesh is good, but to give spiritual food, to preach the Law (*dharmadāna*), is certainly better. It is not necessary to follow Śākyamuni's example and allow one's self to be devoured by a tigress, when safety (*abhayadāna*) can be otherwise won for men, and they may be ripened for Bodhi.*

4. Morality or virtue (*śīla*).—The essence of *śīla* is self-preservation (*ātmabhāvarakṣā*) for the sole purpose of benefiting creatures. Neither a *preta* nor one condemned to re-birth in hell can be of service to others. It is necessary, therefore, to make sure of good re-births, in order to undertake the career of a Bodhisattva. For this purpose, morality must be practised. It is no less necessary to avoid scandal. Every future Buddha, however great his sins, must be revered by men: if they despise him, as a fire covered with ashes, they run the risk of hell. By inquiring after the preachers of the Law, by never forsaking 'spiritual friends,' by keeping constant watch over the state of soul and body, he succeeds in avoiding all harmful actions (*anarthavivarjana*) and fruitless motion (*niṣphalaspandana*), and in preserving good deeds (*puṇyarakṣā*).

The Great Vehicle, however, distinguishes the virtue of abstention (*nivṛttiśīla*), which was the whole *śīla* of ancient Buddhism, from positive virtue (*pravṛtti*°); and it does not set apart the *pāramitās*, which have no practical existence the one without the other. The following account, which is offered as a specimen (according to *Bodhisattvabhūmi*, I. ix.), ignoring a host of scholastic details, will give an idea of moral theology, as the Yogāchāras understood it. It will be noticed that all the 'perfect virtues' are examined according to the same subdivision.

i. What is morality or virtue (*śīlasvabhāva*)? Not to violate the rule. It has four elements: (1) shame (*apatrāpya*) with regard to others, (2) purity of intention and modesty (*hrī*) with regard to one's self, (3) reformation after transgression, and (4) regard for the Law (*ādara*), which keeps the Law ever present in the mind (*smṛti*).

ii. Morality in general (*sarvaśīla*) has two aspects: as regards householders (*gṛhipakṣagata*) and monks (*pravrajitapakṣagata*). It has three elements: (1) observance of the rules of life (*prātimokṣasaṁvara*), which apply to seven categories of persons, monks, nuns, catechumens (*śikṣamāṇa*), novices (*śrāmaṇera*), and the laity of both sexes; showing disregard for the pains and pleasures of the world, like a king undismayed by the loss of his kingdom (as a monk, the Bodhisattva does not take delight even in honours duly conferred on him; he loves solitude even in the midst of the clergy, is severe towards his own faults, lenient towards others, etc.); (2) accumulation of salutary principles (*kuśaladharmasaṅgraha*) with a view to enlightenment, devotion to study, reflexion and meditation, respect for the teacher, ministry to the sick, confession in presence of the Buddhas, the Bodhisattvas and the brethren (*sahadhārmika*), patience, etc.; (3) morality applied to the conquest and consequently to the conversion of one's neighbour; association with neighbours in their good and useful undertakings, and in their troubles and sicknesses, giving them right teaching, advice, and exhortation concerning worldly and supernatural things, gratitude and requital for help received, deliverance from fear, soothing the pain that results from want of enjoyments, bestowing the necessaries of life on the destitute, gathering dis-

* For some interesting details see *Bodhicharyāv.* v. 83–87. On the giving of flesh, cf. *Mahāvagga*, vi. 23, and Takakusu, *I-Tsing*, p. 198. The gift of the Bodhisattva is thus defined in *Abhidharmakośa*: *samyak sambodhyarthaṁ sarvasattvārthaṁ cha*, in opposition to the gift of gratitude, of hope, to the gift made with a view to heaven, to reputation, to the 'ornament of thought,' etc. On the legends of the charity of the Bodhisattva see *Jātakamālā*, ix. and *passim*.

ciples by generosity, etc., behaving according to the rules laid down (on drinking, etc.) when there is no trouble, compliance with the thoughts of men who need conversion (*chittānuvartanā*), having recourse when necessary to punishments, by mystical wonders giving them visions of hell, causing Vajrapāṇi or some other mighty Yakṣa to appear when some listener ventures to doubt his word, or showing portents, multiplying his personality, passing through walls, rocks, etc.

Casuistry offers some curious details, logically deduced from the definition of the Bodhisattva. There are certain acts, wicked in themselves (*prakṛtisāvadya*), which, committed with good intention by a Bodhisattva 'skilled in the means,' not only are not culpable, but are even highly meritorious. When he sees a robber given to murder, and not shrinking even from the murder of Śrāvakas or Bodhisattvas, the saint will kill him, thinking at the same time: 'It matters little if I am condemned to hell, but may this sinner avoid hell.' [In the same way, wicked kings may be dethroned; those who take the property of the Buddhist church or violate *stūpas* may be deprived of the fruit of their robberies, lest in their pride of possession they increase their sin still more. Directors also (*vaiyāpṛtyakara*, *ārāmika*) who waste the property of the Order must be set aside.] For the same reason unchastity is permissible when due to compassion, in order to prevent a woman conceiving hatred—but not in the case of a married woman; nor does this rule apply to monks. Similar exceptions are allowed on all the other commandments of morality.*

iii. Difficult virtue (*duṣkara*) is practised (1) when a man leaves high estate, sovereignty, or pleasures, to take the vows of a Bodhisattva; (2) when he is in poverty and distress, and yet takes them; and (3) when he practises such a high degree of watchfulness and care that he hardly ever commits even a small sin.

iv. All-round virtue (*sarvatomukha*). From this point of view morality is quadruple: (1) acquired (*samātta*), in so far as the vows taken are of three kinds (ii. 1–3); (2) natural (*prakṛti°*), in virtue of which the Bodhisattva, by the very excellence of his character, acts purely in thought, word, and deed; (3) practised; the virtue practised in former births endows him with the power to resist evil and to love good; (4) associated with the expedients, *i.e.* with the four 'elements of popularity.'

v. Virtue of a good man (*satpuruṣa°*): (1) he is virtuous, (2) he inspires others with virtue, (3) he praises virtue, (4) he shows sympathy for those like-minded, (5) when he falls into sin he makes due restitution.

vi. Omni-form virtue (*sarvākāra*) is of thirteen classes, divided into two groups of six and seven respectively: (1) turned towards enlightenment, (2) clear through assuming all the precepts, (3) placed in sinless joy because free from the two extremes of luxury and asceticism, (4) perpetual, (5) firm, (6) possessed of virtue's ornament and itself the ornament of virtue; and (1) negative virtue (*nivṛtti°*) in abstaining from murder, etc., (2) positive (*pravṛtti*), by the accumulation of merits with a compassionate aim, (3) watchfulness in guarding both the negative and the positive, (4) 'ripening' the marks of a Great Man (*i.e.* of a Buddha), (5) reflexion (*adhichitta*), (6) fortunate re-births, (7) the welfare of others.

vii. Abstaining from all action hurtful to others, having regard to the principle, 'Do not to others what you would not have others do to you' (*vighātārthikaśīla*).

viii. Virtue as pleasant in this world as in the next. It includes four kinds of pure actions: (1) forbidding to men what ought to be forbidden them, (2) allowing what ought to be allowed, (3) gaining the sympathy of others, and (4) reproving them—the virtue of morality associated with generosity, patience, energy, contemplation, and knowledge.

ix. Purified virtue is ten-fold; it is especially 'well-taken,' for the monastic vow is taken in order to obtain the Bodhi and not to secure sustenance; it is attentive, surrounded by good aspirations (for there is no question of meriting heaven), orthodox (conforming to Buddhist rules), free from exaggeration, looseness, or asceticism, and leads to nirvāṇa. It confers various blessings: grace and acceptance by the Buddhas (*Buddhaiḥ samanvāhriyate*), death in serene joy, re-birth among Bodhisattvas equal or superior in merit, still more perfect morality in the future, etc.

5. **Patience** (*kṣānti*).—Patience is three-fold: endurance of suffering (*duḥkhādhivāsanākṣānti*), of injuries (*parāpakāramarṣaṇa°*), of insight into the law (*dharmanidhyāna°*; cf. *Majjh.* ii. 175). This last heading (=*dharmeṣu samyakṣantīraṇa°*, *Bodhisattvabhūmi*, I. vi.) is divided in the books of the Great Vehicle into three stages: *ghoṣānugā*, *ānulomikī*, *anutpattikadharmākṣānti*.

The Pāli *Abhidharma* (*Vibhaṅga*, 325 and 328) shows (1) that *kṣānti*† is equivalent to *diṭṭhi* (θεωρία), *ruchi* ('pleasant adhesion'), *muti* ('understanding'); (2) that *dharmanidhyānakṣānti* is the same as [*satya*] *anulomikakṣānti*, that is, regarding all things as fragile, grievous, and insubstantial, in conformity with the four noble truths; and (3) that this *kṣānti* is produced either by teaching (which corresponds to the *ghoṣānugā kṣānti*), or by reflexion (which is, properly speaking, the *ānulomikī kṣānti* of the Skr. texts). There remains the *anutpattikadharmakṣānti*,* of which no trace is to be found in the Pāli *Abhidharma*, and which consists in supporting the view that 'things are not produced,' that they not only have no substantial reality, but that even their production by causes is only an illusion.†

The name of patience applied to 'insight into the law' is justified from a double point of view: (1) resistance and resignation of mind are necessary to the acceptance of the doctrine of the non-existence of things: those who do not 'uphold the profound teaching' (*gambhīradharmakṣānti*) are numerous; (2) this estimate of the reality of things is an essential element of patience in the ordinary sense.

Śāntideva, however, pays little heed to scholastic distinctions. He summarizes, in an eloquent but hardly systematic account, the reasons that justify patience from the philosophical point of view, and make it an essential element of the spiritual life.

Impatience or anger is the greatest of sins, especially for a Bodhisattva, who, by definition, is a 'being of goodness.' It destroys all merits. Even during the earthly life it causes great unhappiness. Anger must be destroyed, and the discontent, born of desire or of dislike, that nourishes it. What is the use of discontent?

Suffering is the common lot of men; there is plenty of occasion to get accustomed to it, and it loses, by custom, all its bitterness; it is very useful, as it arouses pious fear of sin, pity for sufferers, love for Buddhas who deliver from it, disgust for existence, both perishable and penible.

Anger, again, is not aroused by physical suffering, because we know that it is caused by the trouble of the bodily humours (cf. the medical theory of the Greeks). It is also foolish to be angry with men who injure us, for (1) they are acting merely under the influence of causes, and (2) in the first rank of these causes are the wicked deeds of our previous existences. 'My enemy takes a stick to beat me, and I have assumed this body, liable to be wounded, and destined to be beaten. Far from being angry with my enemy, I ought to consider him almost as beneficial as the Buddhas, for he affords me the opportunity of practising patience, and forgiveness of wrongs, which blots out my sins. Am I to make this principle of salvation the cause of my condemnation? Let us rather pity our enemies who ruin themselves by their anger, and let us think of means of saving them in spite of themselves, as the Buddhas do. As for anger provoked by slander, loss of property, etc., it is particularly absurd; so also is anger against the enemies of our religion, iconoclasts,' etc.‡

Envy requires special attention, for the envious man makes use of clever artifices to throw a veil of honesty over his selfish feelings. We must also get rid of the gross illusion that inspires the words, 'My enemy is an obstacle to my good works.' Is there a more meritorious work than patience? What does it matter if my enemy tries to injure me? He is none the less my benefactor. How can we have our sins pardoned by the Buddhas, how can we please the Buddhas, except by loving the creatures, and by doing good to our most cruel enemies? So long as creatures are suffering there is no joy for the compassionate Buddhas. They identify themselves with creatures. It is the Buddhas themselves who appear to us in human form.

6. **Energy** (*vīrya*).—The virtue of energy or 'effort for good' (*kuśalotsāha*) is necessary for the acquirement of merit and knowledge. Its enemies are (1) weakness (or incapacity of body or thought), (2) attachment to the pleasures of this world, and (3) discouragement (or want of resolution) and its result, self-contempt.

To conquer these enemies it is necessary (1) to meditate on the dangers to which we are exposed. 'I am in the

* See art. MAHĀYĀNA on the *Prātimokṣa* of the Bodhisattvas, which is entirely devoted to these regulations.

† It would be going beyond the limits of this article to detail the various *kṣāntis* in the path of the *srotaāpannas*, and of the *kṣāntis* regarded as high states of abstraction belonging to 'worldly' (*laukika*) meditation.

* See p. 744a, n. 1, and p. 747b.

† See artt. MĀDHYAMIKAS and MAHĀYĀNA.

‡ Cf. de Groot, *Code du Mahāyāna*, p. 109, which commands men to defend with arms the Buddhas, the Church, and the State; and preceding column.

power of the passions, like a fish in the hands of the fisherman, for I am in the net of re-births, threatened by death and by the guardians of the hells. Thou hast boarded this vessel, which is the human state; cross the river of suffering; thou fool, this is no time to sleep; when and at what cost wilt thou find this vessel again?' (2) To despise pleasures, which come to fruition in suffering, and to taste the excellent joy of good works. (3) To remember what Śākyamuni said: 'These supreme Buddhas, Śākyamuni, Dīpaṅkara, etc., were insects, flies, and little worms; it was by exerting themselves that they acquired the illumination of a Buddha, so difficult to obtain.' 'Now I have already gained the human estate; the most difficult part is accomplished! The task of the Bodhisattvas is distressful, but the hells are far more distressful. After all, however, is it really distressful? The Buddha is a clever physician; by degrees he accustoms us to making the greatest sacrifices with ease, and besides "the future Buddha is free from all bodily pain, for he has cast sin aside, and he is free from sorrow, for he realizes the truth of the nothingness of the ego."* By his good works the Bodhisattva tastes ever-increasing joys, superior to those of the Buddha entering nirvāṇa. He arrives at nirvāṇa more quickly than the future arhats (*śrāvakas*).' †

To increase his 'energy' (*vīryavardhana*) the Bodhisattva manœuvres his 'armies,' which are:

(1) Desire (*chhanda* or *śubhachhanda*), the root of all merit: 'What a sublime task I have undertaken in the destruction of all my vices, all the vices of the world, and the endowment of myself and my neighbour with every good quality! . . . Those whose works are all good are re-born in the Paradise of Amitābha.' (2) Pride (*māna*), (*a*) the pride of work, 'it is upon me that all difficult and mean works devolve; let every creature cast his burden of work upon me'; (*b*) pride against the passions: 'Son of the Lion of Conquerors, shall I be the slave of the passions (*upakleśa*)? The most humiliating and most exacting of the passions is pride'; (*c*) pride of power or endurance (*śakti*): the Bodhisattva is inaccessible to the passions (*saṅkleśa*).‡ (3) Joy (*rati*), by virtue of which, when he has finished one task, he plunges into another, like the elephant, under the midday sun, into the lake. 'He whose happiness is in action itself' seeks in action nothing but action. (4) Abandonment (*mukti*): he must measure his powers before undertaking a task, and stop when his powers fail. (5) Exclusive application (*tātparya*), especially in all that concerns the means of avoiding the blows of those clever adversaries, the passions. It is a duel, in which the Bodhisattva is armed with the memory of the law of Buddha. If he happens to get wounded (for what fight is without wounds?) he grieves, and reflects: 'What shall I do to prevent this occurring again?' (6) Self-mastery (*ātmavidheyatā*): 'Never does he forget the Buddha's sermon on attention (*apramāda*). He keeps his mind and his body alert and easily managed, so that he may be ready at any time and for any thing even before it is necessary to begin. As the seed of the cotton-plant obeys the wind, coming and going under its impulse, so, in body and thought, the Bodhisattva directs himself according to his will. It is thus that magical powers are obtained, and all happiness.'

7. Contemplation (*samādhi*) or meditation (*dhyāna*).—Contemplation or concentration of thought, which, as we shall see, is indispensable to merit and knowledge, presupposes the simultaneous action of two factors: isolation of the body (*kāyaviveka*), *i.e.* life in retirement; § and isolation of thought (*chittaviveka*), *i.e.* indifference to all worldly desires.

These are theories very favourable to literary development, and have always prevailed widely among Buddhists. Śāntideva deserves great praise for treating them with much eloquence, and especially for being satisfied with sixteen verses to describe the dangers and penalties of a worldly life 'in the midst of fools,' ten verses to exalt the life in the forest 'with the trees which are good naturally, and whose sympathies are easily gained'; but he requires thirty-eight to deter us from love, the source of so much shame and sin, which can be explained only by an aberration of mind, a sickly passion for impurity.

All the meditations here recommended to the Bodhisattva are merely the putting into action of the meditations on impurity (*aśubhabhāvanā, kāyasmṛtyupasthāna*), on cemeteries, etc., which belong to the Little Vehicle. But the Great Vehicle adds a note which is peculiar to it: 'What painful efforts have been needed from the beginning of time for this body, ordained to an inevitable re-death, so mean in comparison with the spiritual body of the Bodhisattvas, and doomed to tortures in hell! Not the millionth part of these efforts and sufferings are necessary to attain Buddhahood. The sufferings of those who are subject to desire are immeasurable and barren.'

The mind is therefore absorbed in contemplation, being detached (*vivikta*). It is able to penetrate the ideas to which it is about to be applied, and to be deeply penetrated by them. This is, properly speaking, *dhyāna* ('meditation,' 'ecstasy'). The Buddhists have constructed a very large number of systems of meditation, which all aim at leading to the possession of knowledge or wisdom (*prajñā*). None of them is foreign to the rule of the Bodhisattvas. By 'perfection of contemplation' may be meant (1) practice of the *dhyānas* and the *samāpattis* of ancient Buddhism; (2) study of the four truths, and of the two truths (relative and absolute); this is the theory of Chandrakīrti in the *Madhyamakāvatāra*; (3) meditation on impurity in order to destroy the vice of passion, on kindness to destroy hatred, on dependent origination to destroy error, or, further, on four 'subjects of mindful reflexion' (*smṛtyupasthāna*), or, in general, on all the doctrines of the *prajñā*, that is to say, which relate to the true nature of things.*

In the *Bodhicharyāvatāra* Śāntideva adopts the very original plan of subordinating the virtue of meditation to the active virtues of charity, humility, and patience. On this subject, usually so dry and wearisome to Europeans, he displays all the heat and emotion appropriate to a homily. There was, however, no better way of introduction into the Vehicle of the Bodhisattvas. Although meditation on the nothingness of the ego, etc., seems to result, and in the Little Vehicle really does result, in apathy and nirvāṇa, by destroying the activity of the mind bent on the objects of knowledge (*jñeyāvaraṇa*), Śāntideva maintains that it begins by putting itself at the disposal of the active virtues which destroy passion (*kleśāvaraṇa*). The nothingness of the ego does not warrant us in remaining inactive; we find in it a reason for sacrificing ourselves for our neighbour. And soon, by a just compensation, this practice of abnegation, destructive of attachment and hatred (*rāga, dveṣa*), results, much more surely than selfish meditation pursued for its own sake, in purging the mind of error (*moha*); that is to say, since every idea, as such, is erroneous, abnegation 'purifies' the mind by emptying it (*moha=jñeyāvaraṇa, śuddha=śūnya*).

Śāntideva's plan is so 'orthodox,' and at the same time, so far as can be judged, so original, that it will be well to give a detailed analysis of this part of his book, in which there is much to be commended.

The disciple must practise (1) the *parātmasamatā*, the equality of self and neighbour; (2) the *parātmaparivartana*, the substitution of neighbour for self. Each includes a clear insight into the real nature of things, and, if the energy (*vīrya*) is strong enough to ensure their perfect practice, they include, in addition, all the merits of a Bodhisattva.

(1) *Parātmasamatā*, making no difference between self and neighbour, is the essence of the obligations of a future Buddha (*bodhisattvasaṃvara*). (*a*) As the body is composed of different parts united together so that the hand takes care to protect the foot, in the same way, in this manifold world of living beings, joy and sorrow are common to all. What joy means for me, it means the same for others. It is the same with suffering. I must do for others what I do for myself. I must destroy my neighbour's sorrow, just because it is sorrow like my own. I must serve my neighbour, because he is a living being as I am. (*b*) If any one should object, 'My neighbour's sorrow is his sorrow, not mine,' the reply is, 'What you call *your* sorrow is such only by an illusion; there is no permanent ego in you, but a series of intellectual phenomena (which series does not exist in itself, any more than a row of ants), or an aggregate of phenomena with no individual unit. There is

* Properly speaking, the saint is free from suffering only when he has attained the 'suppression of all attachment' (*vītarāgatva*). The consequences of sin make themselves felt in two ways: (1) grief (*vipākaphala*), which produces increase of compassion for others; (2) tendency to sin (*niṣyandaphala*), which is destroyed by patience (see *Madhyamakāvatāra*, 29, 10 and 50, 1).

† See Mahāyāna.

‡ Pride, *māna, mananā, manyanā, abhimāna* (to believe wrongly that one is destined to Buddhahood, to rely on ascetic practices and despise others) is a capital sin, worse than murder, etc. Māra endeavours by all means to produce such delusion in the 'beginning' Bodhisattva (*achirayānasamprasthita*).

§ It must be borne in mind that the 'isolation of the body' is not the true 'isolation'; that solitary life involves many spiritual dangers, namely, pride, absence of 'spiritual friends' (*kalyāṇamitra*); that living in the village is more fit for the charitable Bodhisattva than the forest, the natural abode of the *Pratyekabuddha* (*Aṣṭasāhasrikā*, p. 391, 11).

* See Śāntideva, *Śikṣāsamuchchaya*, xii–xiv.

therefore no existing being to whom we can attribute sorrow, of whom we can say "*his* sorrow," or who can say "*my* sorrow."' Why then contend with suffering, if there is no sufferer? Because all the schools agree on this point. If it is necessary to contend with it, contend with it, whatever its nature; if it is not necessary, do not make distinction, and occupy yourself exclusively with your own. (*c*) But why undertake the painful duty of a future Buddha? This duty is not painful, but if it were, yet, should the suffering of one individual put an end to the suffering of several, it is a duty to undertake. It is for this reason that the future Buddhas, whose spirits are fortified in the 'equivalence of the self and the neighbour,' and for whom personal joy is nothing but sadness when their neighbours are suffering, plunge into the Avīchi hell to take the place of the condemned there. The deliverance of creatures causes the river of their thoughts to overflow into an ocean of joy. Their cup of happiness is full. Nirvāṇa, in comparison with this, is insipid. If, therefore, you do good to your neighbour, do not boast about it, or admire yourself, or expect a reward; you are only doing what is quite natural.

(2) *Parātmaparivartana.*—It is owing to the influence of false judgments, repeated during the course of existences, that we attach the illusory notion of self to this product of heterogeneous elements called the body. Why not rather consider our neighbour as our 'self,' and, as far as the body is concerned, regard it as foreign to ourselves? It is really very simple. The disciple treats his neighbour as people of the world treat their 'self'; he treats his 'self' as they are accustomed to treat their neighbours. Śāntideva develops this argument with real eloquence and sincere humility. He says: 'I shall regard myself as a stranger, and I shall find my real self first among the most humble. Then I shall practise pride, for the sake of others, and I shall envy without shortcoming or hesitation. How honoured, I shall say, is this self, and I am not; he is rich, praised, happy; I am poor, despised, unhappy; it is evidently because he is great in this world, and I am small, destitute of good qualities. But have I really no good qualities? If I have not, should not he toil to cure me of my vices? If he is unable to cure me, why does he despise me? Because of his excellent virtues? What matters it to me if he is holy only for his own sake? Has he compassion only for the unfortunates who are about to be overcome by evil destinies? And yet, in the pride of his virtues, he claims to excel among the saints.' In this way the Bodhisattva energetically voices the complaints of the sinful and wretched poor whom a monk is only too apt to despise; and, while excusing his neighbour, he eagerly seeks every occasion to humble himself. Thus our only enemy is our selfish 'ego'; 'Renounce, O my thought, the foolish hope that I have still a special interest in you. I have given you to my neighbour, thinking nothing of your sufferings. For if I were so foolish as not to give you over to the creatures, there is no doubt that you would deliver me to the demons, the guardians of hell. How often, indeed, have you not handed me over to those wretches, and for what long tortures! I remember your long enmity, and I crush you, O self, the slave of your own interests. If I really love myself, I must not love myself. If I wish to preserve myself, I must not preserve myself.'*

8. **Knowledge**, or *wisdom*, as it is usually called by Europeans (*prajñāpāramitā*),† is the supreme virtue. It is the application of the mind to the knowledge of the truth, to the knowledge of what is (*tattva*). By a direct effort it destroys false views concerning self and nature, and its complete possession is identical with nirvāṇa. Only Buddhas possess it at the state of fruit (*phalabhūtā*); Bodhisattvas cultivate its germ (*hetubhūtā prajñā*, *bījabhūtā*). As the *prajñā* of the Mahāyāna is strongly contrasted with the *prajñā* of the Little Vehicle, and as, on the other hand, it is differently understood by the two great Mahāyānist schools, it will be more conveniently examined in detail in artt. DEPENDENT ORIGINATION, MAHĀYĀNA, MĀDHYAMIKAS, VIJÑĀNAVĀDINS. For Bodhisattva in Pāli literature, see JĀTAKA.

LITERATURE.—The literature has been given fully throughout the article.

L. DE LA VALLÉE POUSSIN.

* The *parātmasamatā* and the *parātmaparivartana*, which are practically no more than a translation of the doctrines of the *prajñā*, purify, according to the author referred to, the virtue of energy. They also purify generosity, morality, and patience.

† The definitions of the word *prajñāpāramitā* appear contradictory. The *prajñā*, being in a general way the exact knowledge of all things (*sarvadharmeṣu yathāvadvyavasthanajñāna*), is called *prajñāpāramitā* in so far as it bears on the real nature (*paramārthagrahaṇapravṛtta*), and *jñānapāramitā* in so far as it comprehends the world of appearances in its relative truth (*saṁvṛtigrahaṇa*). (See *Bodhisattvabhūmi*, III. iv.). [The Bodhisattvas acquire first *lokottara jñāna*, i.e. *prajñā* (which assures them of final nirvāṇa), then *laukika jñāna*, i.e. *jñāna* (which endows them with all the privileges of a Buddha in order to help fellow-beings); see *Sūtrālaṅkāra*, xiv. 42.] But our authors do not feel satisfied with this definition, and we find, *inter alia*, the following commentary: *prajñā* is (1) Buddhist philosophy (*adhyātmavidyā*), (2) dialectics (*hetuvidyā*), (3) medical art, (4) grammar, (5) technical arts (*śilpakarma*). (See *Bodhisattvabhūmi*, I. xiv.)

BODOS.—**I. Name and language.**—The generic term 'Bodo' is now, for convenience, applied to all peoples speaking the Tibeto-Burman group of languages. Ethnologically, the true Bodo race exists, in a more or less pure state, all over Assam proper (the Brahmaputra Valley), in Koch Bihār and Northern Bengal, and in the valley of the Surmā river, now part of Eastern Bengal. It is probable that the low semi-Hinduized caste of Chaṇḍāls or Nāmasūdras (now recognized as Hindus) are in fact of Bodo origin; but this cannot be settled till further ethnographical inquiries have been made. In the plains the Bodos have become largely Hinduized, and have intermarried freely with Ahoms (*q.v.*) and other races. But even in the plains, and mingled with Hinduized neighbours, there are large communities of Bodo people, still speaking their Tibeto-Burman language and preserving the simple animistic superstitions of their race. Those of them who live among the Bengalis of North Bengal are by them styled 'Mech' or 'Mleccha,' that is, 'Welsh' or 'barbarian.' But the name has long lost its contemptuous signification, and is placidly accepted by the people themselves as their tribal title. Their Mongolian type of feature and dark-blue clothes, not less than their language and religion, mark them off from their white-clad Hindu neighbours. Adjoining them are the Koch, now mostly Hinduized, and justly proud that, in the person of H.H. the Mahārājā of Koch Bihār, they are ruled over by a dynasty which once conquered nearly the whole of the ancient kingdom of Prāgjyotiṣpur (see ASSAM). Beyond the Koch tribe, eastwards, come the true Bodos or 'plains Kachārīs' (as the English call them), who dwell in the *terai*, or submontane tract, under the hills of Bhutān, known as the Kachārī Dwārs or passes. It was from these people that B. H. Hodgson took the title of Bodo, for they call themselves Boṛo-nī-fisā, 'sons of Boṛo,'* or 'sons of the Man.' (It should be noticed that most of the aboriginal tribes of the N.E. frontier of India have no specific name for themselves. They are 'men.' Other races are Bengali-men, English-men, China-men, etc.) There are about 300,000 of these people still unabsorbed by Hinduism. Mixed with the true Bodos on the borders of Assam and Bengal are some 30,000 Rābhās, speaking a similar language, but holding themselves superior, apparently owing to a somewhat larger infusion of Western blood. These are a finer and stronger race, and at one time supplied recruits to the regiments formerly raised in Assam. In the central mountainous mass of Assam, between the Nāgās on the East and the Khāsis on the West, are about 16,000 people speaking a form of the Bodo language. This branch call themselves Dī-mā-sā.† They are now totally separated from the lowland Bodos; and Endle, the recognized authority, says that their speech now differs from that of the Boṛo-nī-fisā as widely as Italian differs from Spanish. This branch of the family once founded a powerful kingdom, first at Dimāpur in the Brahmaputra Valley, and, when driven thence

* The o in Boṛo is short, something like that in English 'hot,' or rather like that in 'dog.' The central ṛ is sometimes pronounced ḍ.

† The ancient appellation of the hills inhabited by the Dīmāsā in Sanskrit authors is *Hiḍimbā*; and it is probable that *Dīmā* is the name of the former capital Dīmā-pur and in Dīmāsā is derived from (Hi)ḍimbā. 'Kachār' is properly the name of this hilly region. The portion of the valley of the Surmā now called Kachār did not form part of the dominions of the Kachārī Rājā till the 17th cent., when it was acquired by him as the dowry of a Tippera princess whom he married.—C. J. Lyall.

by the invading Āhoms (see ASSAM), at Maibang in the centre of the Hills, and afterwards at Khāspur in what is now the British District of Kachār.*

In the district of Nowgong and the adjoining hills are some 3000 Hojais whose name is probably derived from the Bodo word Hā-jō (*i.e.* 'earth-high,' 'mountain'), and means 'hill-folk.' They are very similar to their neighbours the Lālangs, about 40,000 in number, on the southern slope of the Gāro hills; and in the adjacent parts of the plains district of Mymensingh are about 8000 Haijongs—another name evidently derived from the word Hā-jō. Finally, there are two great isolated highland groups of Bodo people in the hills respectively called after them—those known to us as the Gāros and Tipperas. The former now constitute the British District known as the Gāro Hills, while the Tipperas are inhabitants of a semi-independent mediatized State ruled over by a Hinduized dynasty which intermarries with the royal family of the similar State of Manipur, which lies between Eastern Bengal and Upper Burma. The Gāros are 150,000 and the Tipperas about 105,000 in number. In Upper Assam are a few communities, small in numbers, such as the Chutiyas, Morāns, etc., whose speech, so far as they have not adopted Hinduism and Assamese, is of the Bodo type, that is, an agglutinative language which has learned inflexion from contact with the Indo-European Assamese. The verb is still modified by agglutinated infixes, but in other respects the language resembles Western languages in having acquired even such linguistic luxuries as adverbs, relative clauses, and a (rarely used) passive voice.

2. Origins.—Of all these peoples and their origins there is no written record. They totally lack the historical instinct so characteristic of their Āhom conquerors. Their physical aspect renders it likely that they came from beyond the mountains to the N.E. of the Assam Valley. The Morāns, the most easterly branch of the race, and perhaps the latest settlers in Assam, have indeed a tradition that they came from Maingkaing in the Hukong Valley on the upper reaches of the Chindwin river.

The story goes that there once dwelt there three brothers named Moylāng, Morān, and Moyrān. Moylāng, the oldest, remained in Upper Burma; Moyrān, the youngest, migrated into Nepāl, and was there lost; whilst Morān, the second brother, is said to have crossed the Pātkai pass, the route of many subsequent invasions, and to have settled on the Tiphuk or Diphuk river, where he became the ancestor of the tribe which bears his name.

Linguistic and ethnographical inquiries may some day trace some connexion between the Bodo-speaking peoples and one or other of the races in Upper Burma, but the link is still missing. It is certain, however, that some 2000 years ago or more, Bodo peoples must have covered the whole of the Assam Valley, the greater part of Northern Bengal, and the Surmā Valley. The most significant sign of their presence in this area is the Bodo element in the names of the rivers, such as Dikho, Diphlu, Dipru, Dibong, etc., also traceable in such names as the Tīsta, or Dista, near Darjīling, the Tiphuk in Upper Assam, and the Tipai, or Dipai, in Kachār. (The word *di* or *dūi* in Bodo means 'water' or 'river.') Those of them who settled in the rich, soft, malarious plains underwent the degeneration which seems to have been the fate of all settlers in Eastern India, and were conquered by successive invasions from East and West. Those who took refuge in the mountains, such as the Dīmāsā, Gāros, and Tipperas, became a scattered and half-savage race. The Gāros alone, so far as we know at present, adopted or carried with them the practices, common among the Nāgās, of internecine warfare and head-hunting. Under British rule, however (within the last forty years, that is), they have settled down to agriculture and commerce; and, owing to the efforts of American Baptist missionaries, a great part of the Gāro tribe is already converted to Christianity.

3. Religion.—There is but little that can be said of the religious ideas of the Bodos as a whole, except that they are of the animistic type. All the branches of the Bodo family follow a religion of fear, and are haunted by many gods or spirits, who have to be propitiated by offerings of food, etc. Within historical times the Chutiyas of Upper Assam were wont to offer human sacrifices at their famous copper-roofed temple at Sadiya; but this habit may have been due to imitation of the sacrificial habits of Śāktist Hindus. The majority of the Bodos of the plains are singularly mild and inoffensive people; and though they are much given to making offerings of fowls and goats to various deities, especially, it is significant to note, on the occasion of harvest and other festivals, these are apparently excuses for feasting and merrymaking, occasions on which there is much consumption of boiled pork and rice-beer. There are indications of a now decaying belief in totems, and among the Bodos of Northern Assam there are septs, for instance, calling themselves Mosā-ārūi, 'sons of the tiger,' who go into mourning for a whole day, fasting the while, if a tiger happens to be killed in their vicinity. So also there are those who belong to the clan of the sacred cactus, the Siju (the *Euphorbia*), and are proud to call themselves Siju-ārūi. And there are many others. There seems to be no belief in a supreme deity or creator. Among the Western Bodos, gods are freely borrowed from the Hindu pantheon, one of the most popular of these being Kuvēra, the god of wealth. The plains Bodos are a simple, agricultural, and far from avaricious race, and the extent to which Kuvēra figures in their folk-tales and legends is certainly curious.

The matriarchate is unknown, and the father is an extremely good-natured and easy-going head of a contented and simple family. The tribes are mostly endogamous, if the expression can be used of people who marry very much as European peasants do. There is no child-marriage, and pre-nuptial chastity is the rule rather than the exception. There are signs to show that marriage by capture was once the rule; but nowadays marriages are the result of an elopement, followed by the payment of a fine to the girl's relatives, or of a definite arrangement between the parents of the young people, which results in a present offered to the bride's parents, or else a term of service on the bridegroom's part in his father-in-law's house.

Running rivers and water-courses are held in high respect and honour; and the dead are either buried or cremated (if their relatives can afford the necessary fuel) near streams. A woman is laid on seven layers of fuel, and has seven such layers placed over her. A man has only five such layers. So, when a male child is born, the umbilical cord is severed with five cuts with five separate bamboo knives. A female child is separated from its mother by seven cuts. Not enough is known of the superstitions of the people to enable us to offer any explanation of these mystical numbers. Like other animistic peoples, the Bodos are great believers in amulets, divination, and omens; and though they have no professional priests, they employ wise women, who work themselves into a frenzy, and when in that state are able to tell what gods ought to be propitiated in order to ward off or heal pestilence or failure of crops.

There is a crude belief in a future life. When a body is buried, a reed or bamboo tube is led from

* The name Kachāri now generally given to the Bodos and Dīmāsā by Hindus is derived from this kingdom of Kachār (see previous footnote).

the corpse's mouth to the outer air, so as to enable the spirit to breathe if he will, and the dead man's favourite food is placed for a time near his grave. Grown-up people will not touch these offerings, but children take them without scruple. Spirits, as in the case of many tribes in Eastern India, cannot cross water without help; and if a funeral party has to cross a river, a string is suspended across it to enable the spirit to follow the body or return if it desires to do so.

In short, the Bodos of the plains are a very simple and guileless race. They live on a soil which yields them rich reward for comparatively easy toil, and, as their wants are few, they lead a joyous and childish existence. Like other human children, they are occasionally given to fits of sulks, are very clannish, very obstinate, and somewhat suspicious of more intellectual and ingenious races. But they readily make friends with kindly and sympathetic Europeans; and, with the sole exception of the Gāros (now also rapidly coming under gentler influences), they have long ago lost the martial tendencies the race must once have possessed. They have much of the genial joviality of the Burmese, and are extremely addicted to feasts, junketings, and all manner of merrymaking. Their language has now been investigated with much thoroughness, but a systematic inquiry into their ethnographical position and their beliefs and customs still remains to be made.

BODY.

BODY.—1. Primitive ideas.—Primitive ideas about the human body have an importance far greater than that which belongs to most other groups of anthropological data. They do not simply illustrate the attitude of the primitive thinker to the natural world and its invisible powers; they show us what he thought of himself. For the sharp distinction which modern thought, at least in its unreflective forms, is accustomed to draw between body and mind was quite foreign to his way of thinking. He did not think of body as the 'organ' of mind; his body was himself, possessing attributes of various kinds, which we have learnt to analyze into physical and mental groups, but which he learnt to class and explain from a different standpoint. All the mental states and physical activities of which he was conscious were part of himself, that is, the products of his body; even the soul, when it emerges as a distinct idea, is frequently identified with the breath or blood. This 'physiological psychology' is, of course, a special case of the general inability of the primitive thinker to reach abstractions, and of a general tendency to find concrete support for his thinking. But the tendency was developed and accentuated by that ignorance of anatomy and physiology which prevailed until the last few centuries. Not only primitive but ancient thought in general had no adequate knowledge of the nervous system and the psychical function of the brain; whilst ignorance of the function of the heart in the circulation of the blood (till 1628) made natural the ascription to it of such psychical attributes as its central and obviously important place might suggest. In fact, there can be few organs of the body which have not received at some time, and among some social group or other, credit for psychical activities.

The proof of these statements is cumulative, and can be gained only from the study of such collections of anthropological material as Tylor's *Primitive Culture* and Frazer's *Golden Bough* afford. Reference may be made, however, to the following groups of facts, as types of the evidence to be expected.

(1) *The custom of eating particular organs of animals, or of other men, in order that the special qualities supposed to be connected with these organs may pass into the eater.* Thus among certain African tribes: 'Whenever an enemy who has behaved with conspicuous bravery is killed, his liver, which is considered the seat of valour; his ears, which are supposed to be the seat of intelligence; the skin of his forehead, which is regarded as the seat of perseverance; his testicles, which are held to be the seat of strength; and other members, which are viewed as the seat of other virtues, are cut from his body and baked to cinders. The ashes are carefully kept in the horn of a bull, and, during the ceremonies observed at circumcision, are mixed with other ingredients into a kind of paste, which is administered by the tribal priest to the youths' (Frazer, *GB*[2] ii. 357, where a large number of similar cases is given).

(2) *The nature of certain ordeals and penalties, chosen in relation to the supposed hidden psychical qualities of certain parts of the body.* The history of witchcraft abounds in examples, but the field is much wider. Thus, Lady Anne Blunt reports concerning an Arab dispute as to the parentage of a child: 'The matter, as all such matters are in the desert, was referred to arbitration, and the mother's assertion was put to the test by a live coal being placed upon her tongue' (*A Pilgrimage to Nejd*, i. 10). A probable Biblical example is found in the jealousy ordeal of Nu 5, on which see Gray's 'Numbers' (in *ICC*), p. 48, for a note contributed by the present writer. As an example of the same principle applied to punishment, we may take Law 218 from the Code of Ḥammurabi: 'If the doctor has treated a gentleman for a severe wound with a lancet of bronze and has caused the gentleman to die, or has opened an abscess of the eye for a gentleman with the bronze lancet and has caused the loss of the gentleman's eye, one shall cut off his hands' (Johns' tr. p. 46). This is clearly not a case of *lex talionis*, or the doctor's eye would have been extracted; penalty is exacted from the hands whose inherent vice led them astray.

(3) *The physical qualifications for special offices and activities, especially when these consist in mutilations.* Thus, amongst certain tribes of Central Australia, the essential mark of the medicine-man is a perforation in his tongue, mysteriously caused in the ceremony of his initiation. If the hole closes up during his year of probation, he loses his professional status (Spencer-Gillen[a], pp. 523, 525). Since such perforation can serve no practical end, we must assume that the object is to set free, in some way deemed efficacious by primitive thought, the member which the medicine-man will need most for professional incantations. This is probably one out of many cases of mutilation which are to be explained as the partial dedication of certain organs to those invisible powers capable of resenting their use. Thus, circumcision admits of no explanation, *valid for primitive thought*, which does not apply to the closely related rite of sub-incision, both being connected with the period of puberty (*ib.* p. 251 f.); but both receive adequate explanation, *for primitive thought*, as a propitiatory preparation for the safe use of the organ. A parallel mutilation to that of the medicine-man is recorded by Howitt (p. 747): 'A mother amputates the little finger of the right hand of one of her female children as soon as it is born, in token of its appointment to the office of fisherwoman to the family.'

(4) *Beliefs of superstition and magic about particular organs.* One of the best known cases is that of the evil eye. How physical the influence was conceived to be is shown by the superstition reported as fact by Aristotle: 'When women look into a very clear mirror after their menstrual flow, the mirror's

surface becomes covered with a bloody cloud; and if the mirror is new the stain is hard to remove, but if it is old, the removal is easier' (*On Dreams*, p. 237 of Hammond's tr.). It is significant, also, for the present argument, that early medicine discusses the treatment of the separate parts of the body as though they were so many isolated units; see, for example, the Anglo-Saxon 'Leech-Book of Bald,' of which a summary is given by Payne (*English Medicine in the Anglo-Saxon Times*, p. 40). This corresponded to the popular idea of disease. Euting writes of present-day Bedawin: 'Every disease is located in a particular part of the body, and for every part of the body there is a special medicine, which the doctor requires only to take out of his chest and dispense. A special diagnosis of the disease, or the personal production of the patient, is not considered necessary' (*Tagbuch einer Reise in Inner-Arabien*). In this connexion should be named the well-known Babylonian belief in demonic influences, which is in accordance with the localization of psychical function in various physical organs (cf. also the theory of mutilations as outlined above). 'Almost every part of the body is threatened by an evil demon; the ashakku brings fever to the head, the namtar threatens the life with pestilence, the utukku affects the neck, the alu the breast, the ekimmu the hips, the gallu the hand, the rabisu the skin' (Jeremias, *Hölle und Paradies bei den Babyloniern*, p. 18).

Such illustrations, which might be multiplied to almost any extent, sufficiently prove the identity, for the primitive thinker, of the sciences we clearly distinguish as physiology and psychology. This confusion is of fundamental importance for the study of primitive and ancient ideas of personality, and is frequently neglected by those who undertake to interpret ancient thought, particularly by interpreters of the Old Testament. Its further examination belongs to the subject of ancient psychology. Here, we are concerned with the evolution of a distinct science of the body, and with its present problems for psychology and religion.

2. Evolution of physiology.—It is plain that a sound knowledge of anatomy was necessary before an accurate physiology could be reached; yet of this Sir William Turner remarks: 'Amidst the general obscurity in which the early history of anatomy is involved, only two leading facts may be admitted with certainty. The first is that previous to the time of Aristotle there was no accurate knowledge of anatomy; and the second, that all that was known was derived from the dissection of the lower animals only' (*EBr*[9], *s.v.* 'Anatomy'). The most notable name before Aristotle is that of Hippocrates (B.C. 460–377), who does not distinguish vein from artery, and nerve from sinew; 'he represents the brain as a gland, from which exudes a viscid fluid; that the heart is muscular and of pyramidal shape, and has two ventricles separated by a partition, the fountains of life—and two auricles, receptacles of air; that the lungs consist of five ash-coloured lobes, the substance of which is cellular and spongy, naturally dry, but refreshed by the air; and that the kidneys are glands, but possess an attractive faculty, by virtue of which the moisture of the drink is separated, and descends into the bladder. He distinguishes the bowels into colon and rectum' (*l.c.*). Aristotle (b. B.C. 384) has confused notions of the nerves, and, though he connects the blood-vessels with the heart, he has no idea of the circulation of the blood. He regards the brain as the organ of cooling (*On Sleep*, ch. iii.). 'The heart is at once the physiological and psychical centre of man. . . . To Aristotle the brain is merely a regulator for the temperature of the heart; the brain is bloodless and cool, and the blood and warm vapours from the heart rising to this are lowered in temperature' (*Psychology*, Hammond's tr., p. xxiv; for the reasons which led Aristotle astray, see Ogle, *On the Parts of Animals*, p. 168 n.). Galen (b. A.D. 130) is the first certain user of vivisection, and his writings are 'the common depository of the anatomical knowledge of the day' (an account of his physiology is given by Foster, *History of Physiology*, p. 12 f.). No work of great importance in physiology was done between Galen's time and the 16th cent., when the *Fabrica Humani Corporis* of Vesalius was 'the beginning not only of modern anatomy, but of modern physiology' (Foster, *op. cit.* p. 10, who traces the development of physiology through the 16th, 17th, and 18th centuries). In the 19th cent. that knowledge of the nervous system was elaborated from which the problems of the modern psychologist take their rise.

3. Body and Mind.—The problem of the relation of body to mind is of fundamental importance to a large group of sciences. 'Since the dawn of modern philosophy in the *Meditations* of Descartes, the question of the relation of body and mind has been continuously under discussion' (Ward, *Naturalism and Agnosticism*, ii. 4). The chief difference between ourselves and the primitive thinker is that we have narrowed the problem to the relation between the nervous system (more especially the cerebral cortex) and consciousness. The full discussion of this problem, however, belongs more properly to the articles on BRAIN AND MIND, MIND, and PSYCHOLOGY.

A summary review of the positions taken by some typical thinkers will serve to introduce the modern aspect of the problem. Descartes (1596–1650), starting from the existence of the self as the thinking thing, and arguing to the existence of body (in general) as the extended thing, maintained, though in marked contradiction to the general principles of his system and to his treatment of animal consciousness, the interaction of mind and body in man. He assigned their point of contact to the pineal gland—a small body about the size of a cherry-stone, which lies between the upper quadrigeminal bodies of the brain, and is connected with the optic thalami—since some such single organ seemed necessary in order to combine impressions from the double sense-organs (*Les Passions de l'âme*, art. xxxi. f.). Here, as the chief seat of the soul, he supposed mind to influence body, and body mind. Geulincx (1625–1669)—cf. Malebranche (1638–1715)—abandoned the theory of interaction for that of 'occasionalism,' which asserts that God causes the changes in the body corresponding with those in the mind, and *vice versa*. Leibniz (1646–1716) introduced the conception of 'pre-established harmony,' which rejects both interaction and occasionalism in favour of a Divinely created correspondence of mind and body, like that of two clocks keeping perfect time. Spinoza (1632–1677) made the problem more distinctly metaphysical by his treatment of thought and extension as simply different attributes of the one substance, God. This metaphysical monism asserts that 'mind and body are one and the same thing, conceived at one time under the attribute of thought, and at another under that of extension' (*Ethica*, pt. iii. prop. ii. Schol.). Hume (1711–1776) emphasized the mystery of the union of mind and body (*Inquiry concerning the Human Understanding*, vii. pt. i.), and argued against the alleged causality of mind in relation to body. Huxley (1825–1895) extended the hypothesis of Descartes as to animals into the realm of human consciousness. Whilst holding that 'all states of consciousness in us as in them are immediately caused by molecular changes of the brain-substance,' he considered that 'in men, as in brutes, there is no proof that any state of consciousness is the cause of change in the motion of the matter of the organism'; the consequence is that 'our mental conditions are simply the symbols in consciousness of the changes which take place automatically in the organism' (*Collected Essays*, i. 244).

Huxley's theory forms one of the various modern solutions of the problem; but a theory which reduces

conscious experience (including activity) to a series of epiphenomena or 'by-products' is not adequate to explain that experience; whilst the denial of mental causality is founded on the unproved assumption that the universe is mechanical. This is shown most ably by Ward (*Naturalism and Agnosticism*, Lects. xi. xii.), who in the same context discusses Clifford's 'mind-stuff' theory, and the Neo-Spinozism of the 'double-aspect' theory. The chief modern lines of explanation of the relation of mind and body are those of interactionism, automatism, and parallelism: 'interactionism, asserting that the causal influence runs in both directions—in sensation from the body to the mind, in volition from the mind to the body; automatism, maintaining that it runs in one direction only—always from the body to the mind; and parallelism, denying all causal influence and holding the relation to be of a different nature.'* It should be noted that psycho-physical parallelism is frequently a purely descriptive term, to denote the correlation of the phenomena of consciousness with physiological (nervous and cerebral) processes, together with the real distinction between the two series. In this sense, it is doubtless true to say that 'this is the most generally accepted view of the relation between mind and body at the present day' (Baldwin, ii. 258). The much larger metaphysical problem of the relation of mind and matter cannot be discussed on the narrow stage of the present article (see artt. on MIND and PHILOSOPHY). However completely we might show the dependence of consciousness on the mechanism of the cerebral cortex and the nervous system generally, there would remain the apparent fact that psychical and physical processes are disparate. We must not hastily assume that the laws of the one can be applied without question to the other. The principle of the conservation of energy, however important as a working formula in the physical sciences, has mathematical validity but not philosophical application. On the other hand, we are not at liberty to interpret the causality of mind as though it were the interference of a new *quasi*-physical force with the working of that particular part of the physical system which forms the human body. The problem is in miniature, therefore that of the relation of God to the universe, where we have also to reconcile the existence of natural law with real causality; its further consideration belongs to this larger arena. See, further, art. BODY AND MIND.

4. Problems for religion.—There remains to be noticed, however briefly, the group of problems, arising in connexion with the human body, for the student of religion, which receive fuller discussion in special articles. (1) The controversy as to man's place in nature (see art. ANTHROPOLOGY) is now chiefly of historical interest, so far, at least, as *the relation of man's body to the animal world* is concerned. The modern theologian is usually ready to accept the clear verdict of the scientist that, 'judged by his structure, Man is undoubtedly a vertebrate animal of the class Mammalia' (Duckworth, *Morphology and Anthropology*, p. 12). In exact zoological classification he forms the Family Hominidæ in the Sub-Order Anthropoidea in the Order Primates in the Section Eutheria of the Sub-Class Theria of the Class Mammalia. In point of structure, that is, his nearest relatives are the Gibbons, Orang-utans, Chimpanzees, and Gorillas. This does not mean that these animals actually belong to man's ancestry. 'It is practically certain that the modern Simiidæ did not themselves figure in the ancestry of Man, and that they are themselves specialized in a high degree, more specialized in many ways than the Hominidæ and more specialized than their own ancestors' (Duckworth, *op. cit.* p. 543). On Man, 'specialization of the cerebrum has conferred an altogether exceptional development of self-consciousness (*op. cit.* p. 545) . . . the future modification of the cerebrum will be largely dependent on its blood-supply, which in turn is related to the quality of the cardiac muscle and various physiological factors . . . on what may, in the widest sense, be termed hygienic conditions' (*op. cit.* p. 546). If we grant, however, this physical relationship of man with the lower animals, it seems hardly possible to deny the psychological. The close correlation of the extent to which brain and nerve are elaborated in them with the observed degree of their intelligence is found to continue upwards to man himself; if the series is more or less continuous on the anatomical and physiological side, it is natural to expect that the corresponding psychical series knows no hard and fast line. This expectation is confirmed by the study of comparative psychology: 'Throughout the range of the sense-experience, common to men and animals, their emotional states are of like nature with ours. . . . It is the framing of ideals, not merely as products of conceptual thought, but also as objects of appetence and desire ever beckoning him onwards and upwards towards their realization, that is distinctive of man as man' (Lloyd Morgan, *Introd. to Compar. Psychology*, pp. 365, 379). The practical bearing of this may be seen from the standpoint of biology. The balance of power between the activity of any organism and its control by the environment is continually altering in favour of the former. 'Increasingly we find the organism—be it bird or mammal or man—much more master of its fate, able to select its own environment in some measure, able to modify its surroundings as well as be modified by them' (J. A. Thomson, *Heredity*, p. 517). In the case of man, this fact has been strikingly expressed by a leading biologist, who calls him 'nature's insurgent son' (Ray Lankester, *The Kingdom of Man*, ch. i.). 'If we may for the purpose of analysis, as it were, extract man from the rest of Nature of which he is truly a product and part, then we may say that Man is Nature's rebel' (*op. cit.* p. 26). Such a conception of man, given, it should be noticed, from the purely scientific point of view, is an implicit recognition of the right of the psychologist and of the theologian to consider man apart from nature, and to claim for him that unique place in the universe which the higher religions, and especially Christianity, demand. We need hardly hesitate, then, to agree with what Huxley wrote in 1863:

> 'I have endeavoured to show that no absolute structural line of demarcation, wider than that between the animals which immediately succeed us in the scale, can be drawn between the animal world and ourselves; and I may add the expression of my belief that the attempt to draw a psychical distinction is equally futile, and that even the highest faculties of feeling and of intellect begin to germinate in lower forms of life' (*Man's Place in Nature*, ed. of 1894, p. 152).

(2) *The relation of the body to the conception of personality* obviously requires some re-statement in the light of the general acceptance of an evolutionary view of man. Hebrew thought in its earlier form was unable to conceive any continuance of personality apart from the body; even in the theology of the later Judaism the same idea survives in the characteristic insistence on the resurrection of the body as essential to life beyond death. Over against this stands the Platonic emphasis on the immortality of the soul, which assigns to the body a quite subordinate part. The attitude of St. Paul differs from both: while

* Strong, *Why the Mind has a Body*, p. 2 (an elaborate discussion of the problem from the standpoint of 'panpsychism'). In regard to the view that thought is a function of the brain, see below, 4 (2).

he conceives a body to be necessary to personality, he awaits deliverance from this present body in which sin and death reign, and the development of a spiritual or 'pneumatic' body, more suited to regenerated human personality (1 Co 15[44], 2 Co 5[1ff.]). In the early Christian Church, we gain light on the relation of 'soul' and body from the various doctrines as to the origin of the soul (see art. SOUL), viz. pre-existence (Origen), traducianism (Tertullian), which taught that the soul was begotten with the body, and creationism, which may be regarded as the final normal doctrine, holding that each soul was created by God at birth without any mediation. The second of these, viz. traducianism, has clearly the most contact with the conceptions of modern biology (though its naive distinction of soul and body is no longer possible). The subsequent nature of the individual man, physical and psychical, is now known to be conditioned by the chromosomes contributed by spermatozoon and ovum respectively in the process of fertilization. When we ask what this conditioning may imply, this genetic problem, like the purely psychological one noted above, brings us face to face with ultimate questions. It is useless to ask what the fertilized ovum may 'contain'; all we can say is that from this source, or through this channel, flows the whole life of man (see art. LIFE). The subsequent emergence of self-consciousness in the infant, with all that this implies, lifts the whole problem into a realm beyond the physical. This is the consideration with which we ought to approach the problem as it meets us in the outgoing of man's life. That his personality depends on the body for its present development and expression cannot carry with it any prejudice against the continuance of personality when the body has been resolved into its chemical elements—unless we have silently begged the whole question of the relation of mind and body. As James has urged so forcibly (*Human Immortality*, p. 24 f.), even though we say 'thought is a function of the brain,' it still remains open to us to maintain that the function is not productive, but permissive or transmissive; in other words, that consciousness finds an organ for its expression in the brain, and is limited rather than produced by its present physical conditions. In this connexion, it is attractive to follow St. Paul's line of thought, and to think of some other 'spiritual' body, which may express more adequately man's personality in that life beyond death, which the highest spiritual life here itself demands (see art. IMMORTALITY).

(3) *The conception of the human body in ethical thought and its treatment in practical morals* have given rise to a third important group of problems. It is easy for a dualistic conception of man's nature to carry the philosophic opposition of spirit and matter, soul and body, into the ethical sphere; so we may trace the transition from the Platonic view of the body as the prison-house of the soul* to Philo's conception of all matter as evil (cf. Pfleiderer, *Philosophy of Religion*, iv. 5), and to the well-known dualism of the Gnostics and the Manichæans. Such a view is brought home to the practical consciousness of men by the fact that the most intense moral conflicts, especially at the threshold of manhood, are often those between the natural passions of the body and the higher claims of reason and conscience. An evolutionary view of man would explain this conflict as part of the process of man's upward development from a purely animal life; but a dualistic philosophy also provides an explanation. As a practical consequence we have the principle of asceticism (*q.v.*), prominent in Oriental religions generally, especially in Buddhism, though not belonging to Judaism, except in the peculiar and late developments of the Essenes and the Therapeutæ. In certain forms of Greek philosophy, notably Pythagoreanism, and the later Neo-Platonism, asceticism was made the condition of deeper philosophic and religious meditation. In Christianity, its special developments are connected with Monasticism (*q.v.*). For the general doctrinal view of the body in relation to evil, see BODY (Christian), 3 (*a*), and SIN. In contrast with these applications of dualism, it may be urged that the scientific view of the body is also the truest from a religious standpoint: 'Our body is an integral part of our human personality' (Illingworth, *Christian Character*, p. 146).

* In practice, Plato insists on the proper cultivation of the body 'for the sake of the soul' (*Rep.* bk. iii. 410).

LITERATURE.—*ANTHROPOLOGY*: see list under article of that name, which should itself be consulted in regard to man's place in nature. *PHYSIOLOGY* (early history of): Turner, art. 'Anatomy,' in *EBr*[9]; Foster, *History of Physiology* (Cambridge, 1901). *PSYCHOLOGY*: the relation of mind and body is discussed in most of the general literature of the subject (see list under art. PSYCHOLOGY), but the following in particular may be named: Bain, *Mind and Body* (1873, London); Huxley, *Animal Automatism* (1874, in *Collected Essays*, Eversley series, 1904, London); Le Conte, *Evolution and its Relation to Religious Thought*[2], ch. iv. (1891, London); James, *Principles of Psychology*, chs. v. and vi. vol. i. (1891, London); Münsterberg, *Grundzüge der Psychologie* (1900, Leipzig); Royce, *The World and the Individual*, vol. ii. Lect. v. (1901, New York and London); Baldwin, art. 'Mind and Body,' in *Dict. of Philos. and Psychol.* vol. ii. (1902, New York and London); Villa, *Contemporary Psychology*, ch. iii. (Eng. tr. by Manacorda, 1903, London); Ward, *Naturalism and Agnosticism*[2], vol. ii. (1903, London); Strong, *Why the Mind has a Body* (1903, New York and London); Stout, *Manual of Psychology*[2], Introd. ch. iii. (1901, London); Calkins, *The Persistent Problems of Philosophy* (1907, New York and London).

H. WHEELER ROBINSON.

BODY (Buddhist).—The Buddhist attitude towards the body has been summed up as follows: (1) the body, whether of men or of higher beings, can never be the abode of anything but evil; (2) final deliverance from all bodily life, present and to come, is the greatest of all blessings, the highest of all boons, and the loftiest of all aims.[1]

The body is regarded as an 'impure thing and foul.' It is likened to a wound, a sore. It has to be borne about, but, because of its character, there must be no clinging to it. It is thus borne about 'for the sake of righteousness.'[2] The body is the 'old worn-out skin of a snake.'[3] It is a 'dressed-up lump, covered with wounds . . . wasted . . . full of sickness . . . a heap of corruption.'[4] All evil passions proceed from the body.[5] There is no pain like the body; hunger is the worst of diseases, the body the greatest of pains.[6] The weakness of the body is sometimes emphasized—it is fragile, like a jar; in death it will 'lie on the earth, despised, without understanding, like a useless log.'[7]

It is 'disgust' (*nibbidâ*) for the body that is the motive for *pabbajja*—that is, the 'going forth' from house life into religious life—and also for the layman to sit loose to the things of the world. Gautama was led to 'go forth' for this reason.[8] He used to consider with himself the facts of age, disease, etc., until he determined to escape them. A later amplification of the same idea is the story of Gautama's driving through the town, and seeing an old man, a sick man, and a corpse. According to Buddhist teaching, the object most calculated to produce this 'disgust' is the human body itself, living as well as dead. The *Vijaya Sutta* is 'a reflection on the worthlessness of the human body'; a follower of Buddha sees the body only as it really is, and consequently goes to

nirvāṇa.[1] The noble Yasa left his house because he saw the female musicians asleep—'one would think it was a cemetery one had fallen into.'[2] Mental exercise of this description is frequently given as a specimen of right meditation. The idea of a 'corpse eaten up by worms,' etc., is to be kept before the mind when a good point of meditation occurs.[3] Yet bodily deformity, physical infirmity, or a maimed limb disqualified for *pabbajja* ordination.[4]

The idea of 'disgust' with the body is set forth in Gautama's 'burning' fire-sermon, delivered on a hill, Gayāsisa, near Gaya:

'Everything, O monks, is burning. The eye is burning; visible things are burning. The sensation produced by contact with visible things is burning—burning with the fire of lust (desire), enmity, and delusion, with birth, decay, death, grief, lamentation, pain, dejection, and despair. The ear is burning, sounds are burning; the nose is burning, odours are burning; the tongue is burning, tastes are burning; the body is burning, objects of sense are burning. The mind is burning, thoughts are burning. All are burning with the fire of passions and lusts. Observing this, O monks, a wise and noble disciple becomes weary of (or disgusted with) the eye, weary of visible things, weary of the ear, weary of sounds, weary of odours, weary of tastes, weary of the body, weary of the mind. Becoming weary, he frees himself from passions and lusts. When free he realizes that his object is accomplished, that he has lived a life of restraint and chastity, that re-birth is ended.'[5]

One of the difficulties in the way of right thinking, without which nirvāṇa cannot be attained, is lack of training in the 'management of the body,' which, with lust, ill-will, delusion, wrong-doing, and lack of training in conduct, or thought, or wisdom, causes the thinking powers to be brought into play with difficulty, or to act slowly.[6] It is the 'eye of flesh' which prevents perfect insight, and only by its removal can the desired end be obtained.[7]

The body is the sphere of suffering:

'Now, this, O Bhikkus, is the noble truth concerning suffering: birth is attended with pain, decay is painful, disease is painful, death is painful. Union with the unpleasant is painful, painful is separation from the pleasant, and any craving that is unsatisfied, that, too, is painful.'

It is also the body which is the origin of suffering. The 'noble truth' on this subject has been summed up by Professor Rhys Davids as 'the lust of the flesh, the lust of life, and the love of the present world.'[8]

According to the teaching of Buddha, suffering, subjectively, is desire, in all its varied forms. But desire originates from the body.

'Buddha said: "Passion and hatred have their origin from this (body); disgust, delight, and horror arise from this body; arising from this body, doubts vex the mind as boys vex a crow."[9] "For him whose greediness for name and form is wholly gone, O Brāhmana, for him there are no passions by which he might fall into the power of death."'[10]

Objectively, suffering lies in embodiment, or matter, and consequently the human body is looked upon as a contemptible thing.[11]

Complete release from suffering is possible only by emancipation from body and matter. Therefore the 'elements of existence' (*upadhi*) must be destroyed.

'Knowing the step (of the four truths), understanding the Dhamma, seeing clearly the abandonment of the passions, destroying all the elements of existence (*upadhi*), such an one will wander rightly in the world.'[12] 'The elements of existence (*upadhi*) are overcome by thee (Buddha).'[13] 'He who, being ignorant, creates *upadhi*, that fool again undergoes pain; therefore let not the wise man create *upadhi*, considering (that this is) the birth and origin of pain.'[14] 'Mettagû says: "I delight in these words of the great Isi; well expounded, O Gautama, is (by thee) freedom from *upadhi*."'[15]

Emancipation from bodily form is therefore the *summum bonum* of Buddhism, the ultimate goal of all aim and effort.

'Seeing others afflicted by the body, O Piṅgiya,' so said Bhagavat, '(seeing) heedless people suffer in their bodies, therefore, O Piṅgiya, shalt thou be heedful and leave the body behind, that thou mayest never come to exist again.'[1] 'Seeing men seized with desire, O Piṅgiya,' so said Bhagavat, 'tormented and overcome by decay, therefore thou, O Piṅgiya, shalt be heedful and leave desire behind, that thou mayest never come to exist again.'[2] 'As a flame blown about by violence of the wind, O Upasiva,' so said Bhagavat, 'goes out, cannot be reckoned (as existing), even so a Muni, delivered from name and body, disappears, and cannot be reckoned as existing.'[3] 'For him who has disappeared there is no form, O Upasiva,' so said Bhagavat, 'that by which they say he is, exists for him no longer; when all things (*dhamma*) have been cut off, all (kinds of) dispute are also cut off.'[4] 'By the noble the cessation of the existing body is regarded as pleasure.'[5] 'Through countless births have I wandered,' said Gautama, 'seeking but not discovering the maker of this my mortal dwelling-house, and still, again and again, have birth and life and pain returned. But now, at length, art thou discovered, thou builder of this house (of flesh). No longer shalt thou rear a house for me. Rafters and beams are shattered, and, with destruction of desire (*tanhā* = thirst), deliverance from repeated life is gained at last.'[6]

Though the constant endeavour and ultimate hope of the Buddhist is to escape from corporeal existence, Gautama clearly teaches that the body is to be cared for. Desire for the pleasures, and the formation of good habits, which minister to the real self, are inculcated; and pursuit and conduct which contribute to this end are to be cultivated.

(1) Suicide is forbidden;[7] food is to be used in moderation;[8] the use of intoxicating liquors is prohibited;[9] no wrong has to be done with the body;[10] health is the greatest of gifts;[11] food is to be enjoyed;[12] the eating of flesh is no defilement;[13] every bodily act has to be carefully watched over, words measured, manner gentle, thought collected, rejoicing in heart.[14]

(2) Stress is continually laid upon self-control; the 'forest of lust' has to be cut down;[15] bodily anger and sins of the body have to be forsaken;[16] sensual pleasures must not be clung to;[17] they who 'suffer loss' are they who are fond of society, the lazy;[18] sloth is 'the taint of the body';[19] earnestness is the path of immortality;[20] sins of the body will work out their bitter fruit even in this life.[21]

(3) No living thing is to be killed; weapons and sticks must be laid down; no hurt is to be done to another;[22] neither the feeble nor any other being is to be despised;[23] there must not even be the wish to harm another;[24] the great law of love must influence the Buddhist in every relationship of life.[25] Even *pabbajja* is prohibited unless the permission of father and mother is obtained, for

'the love for a son cuts into the skin; having cut into the skin, it cuts into the hide; having cut into the hide, it cuts into the flesh; having cut into the flesh, it cuts into the ligaments; having cut into the ligaments, it cuts into the bones; having cut into the bones, it reaches the marrow, and abides in the marrow.'[26]

In the *Sutta Nipâta*, the *Âmagandha Sutta* contains an account of what defiles a man. It bears comparison with Mt $15^{11.17-20}$. It is not the eating of flesh which defiles, but destroying living beings, stealing, falsehood, worthless reading, adultery, unrestrained enjoyment of sensual pleasures, mercilessness, illiberality, intimacy with the un-

just, etc. If this long category of sins against the body, and against others, characterizes the life,

'neither the flesh of fish, nor fasting, nor nakedness, nor tonsure, nor matted hair, nor dirt, nor rough skins, nor the worshipping of fire, nor the many penances in the world, nor hymns, nor oblations, nor sacrifice, nor observance of seasons, purify a mortal who has not overcome desire.' *

J. H. BATESON.

BODY (Christian).—1. The New Testament generally.—The New Testament ideas on the subject of the body are rooted firmly in the soil of Old Testament teaching (see Gn 2^{7}, Ps 63^{1}, Ezk 44$^{7.9}$, Mic 6^{7}). From the minds of the writers anything like a dualistic antithesis, such as we find in Greek philosophy, between body and soul, matter and spirit, is far removed. As in the older Scriptures, the unity of the human personality is the fundamental feature in the conception of man. At the same time this unity is recognized as resting upon an underlying duality; man is conceived of as a complex being with a lower and a higher part, by one of which he is linked to the life of nature, and by the other to the Spirit of God.

In the Hebrew psychology 'flesh' (בָּשָׂר) was the prevailing name for man's earthly part, and 'spirit' (רוּחַ) for his heavenly part, while 'soul' (נֶפֶשׁ) was the union of the two in the living creature (see esp. Gn 2^{7}). There was no proper Heb. term for 'body,' precisely because the Hebrews, with their psycho-physical ideas of personality, did not feel the need for a special word to denote the bodily organism considered by itself. When we come to the NT we find a somewhat different order of terminology, which has come in through familiarity with the LXX version, and is thus indirectly due to Greek influences. 'Soul' (ψυχή) and 'spirit' (πνεῦμα) are now frequently used in senses that can hardly be distinguished, to express the whole inward or spiritual nature (*e.g.* Lk 1$^{46.47}$, Ph 1^{27} [RV]). The term 'body' (σῶμα), again, has now come into general use, and is employed in connexions which make it practically synonymous with 'flesh' (σάρξ; cf. 1 Co 5^{3} with Col 2^{5}, 2 Co 4^{10} with v.^{11}). But, even so, body and soul, flesh and spirit, are not used in the sharply antithetic fashion of the Greek philosophic dualism. If the terms are Greek, the ideas are still Hebrew. In the NT a soul ordinarily means an embodied soul, and a living body is always conceived of as an ensouled body. The emphasis within the idea of personality, it is true, now falls more emphatically on the inner and spiritual side; existence, and even a blessed existence, is consistent with separation from the body—St. Paul thinks of an absence from the body which is yet a presence with the Lord (2 Co 5^{8}). But the old Hebrew view of the essentiality of the body to human nature in its completeness is asserted afresh in the doctrine of the resurrection, which had become familiar to later Jewish thought, and asserted now more emphatically than before, through being carried over from the present world of things seen and temporal into the unseen and eternal realities of the world to come.

2. Christ and the Gospels.—When we descend to particulars, it may be said that there are two great lines of evidence which are of paramount importance for the NT doctrine of the body. The first comes from Christ and the Gospels. And here, as everywhere in the NT, the evidence points in two directions, one part of it serving to exalt more than heretofore the worth and dignity of man's physical nature, the other to show the subordination of that nature to the claims and uses of his spiritual being.

(1) In the first place, we find in the revelation of Christ and in the records of His teaching *a wonderful exaltation of the body.*—(*a*) The fundamental fact here is found in the Incarnation itself, in the Word made flesh (Jn 1^{14}), in the Son of God becoming the man Christ Jesus (Mt 11^{27} etc.). In the OT the flesh is dignified as being brought into a living unity with the spirit, the dust of the earth with the breath of life that comes from God (Gn 2^{7}). In the NT the flesh is raised to a dignity unspeakably higher, by the habitation in it and incorporation with it of the very Word of life (1 Jn 1$^{1.2}$).—(*b*) The sinless life of Jesus is another illuminating truth. For this life without fault or stain, lived in the body, disposes at once and utterly of any idea that there is something essentially evil and degrading in the possession of a physical nature as such. It shows that body is not hostile to spirit, but that, on the contrary, the two may be joined together in a solidarity so true and harmonious as to become a perfect instrument for doing God's will upon earth.—(*c*) Very significant, too, is the fact of Christ's joy in living, and His freedom from that ascetic temper which is nothing else than dualism in one of its practical forms. He 'came eating and drinking,' and was so far removed from a false spiritualism, with its one-sided otherworldliness, that His enemies even accused Him of sensuality (Mt 11^{19}). He loved the scenes and shows of nature as they spread themselves before His eyes, and, so far from treating them, like some good men, as cunning traps for the unwary soul, saw in them tokens of God's presence and foreshadowings of the things of the Kingdom of heaven (Mt 6$^{26ff.}$ 13 etc.).—(*d*) Parallel with this was His constant recognition in other men of the value and claims of the physical nature. He never sought to ignore or disparage what belongs to man's natural life; He came, as we read in the Fourth Gospel, not to kill or steal or destroy, but that we might have life, and might have it abundantly (Jn 10^{10}). The works of healing, which formed so large an element in His public ministry, are the standing proof of this attitude of Jesus to the physical life of man. Here, too, must be considered—as contradicting ideas which afterwards took possession of the mind of the Church—His vindication of marriage as forming a part of the Divinely appointed order of human society (Mt 19$^{4ff.}$; cf. Jn 2$^{1ff.}$); and further, as flowing from His approval of marriage and parenthood, His loving recognition of little children, and the place He assigned to them in the Kingdom of God (Mt 18$^{1ff.}$ 19$^{13ff.}$).—(*e*) The resurrection of Jesus Christ and His ascension to glory are the culminating proofs offered by the NT of the value and dignity of the human body. He not only partook on earth of our human frame, but, when He re-appeared on the further side of death, resumed a life of physical conditions (Mt 28^{9} etc.), and carried the human body with Him to the right hand of God (Lk 24^{51}, Ac 1^{9}). For the Christian doctrine of the body this is the truth of highest significance—making the doctrine one that applies to both worlds—that, as on earth so also in heaven, as in His humiliation so also in His exaltation, Jesus Christ continues to live the life of the body as well as the life of the spirit.

(2) But, side by side with this exaltation of the body, the evidence which comes to us from Christ and the Gospels points always to (*a*) *the subordination of the body to the soul.* Although by word and deed, by the facts of His history and the very constitution of His Person, Christ asserted the worth of man's physical nature, it was a fundamental part of His teaching that what is highest in our personality must be sought in the inner nature, and that the body must be kept in a due subjection to the authority of the spirit. 'Fear not them,' He said, 'which kill the body, but are not able to kill the soul' (Mt 10^{28}; cf. Lk 12^{4}). And in some of His most solemn utterances He taught that the outward world, which makes so strong an appeal to our physical senses, is worth nothing whatever in comparison with those spiritual interests and possessions on which our truest life depends (Mt 16^{26}, Mk 8$^{36f.}$, Lk 12$^{15-21}$). He was no teacher of asceticism, as has been said, but He declared, nevertheless, that God's Kingdom and righteousness were the first things which His disciples must seek (Mt 6^{33}), and that those who are engaged in this high quest may sometimes find it needful to pluck out the right eye or to cut off the right hand (5$^{29f.}$). And whatever further meaning lies enfolded in His agony in Gethsemane and His death upon the cross, they were at all events an affirmation

* *Sutta Nipâta*, pp. 238-248.

for all time of the truth that the life of the body must be freely yielded up whenever this becomes necessary to the fulfilment of the Divine purpose, and that the spirit must be willing even though the flesh is weak (Mt 26[39ff.]).—(*b*) Again, the evidence points to *the provisional character of the earthly body*. Christ sanctioned marriage, as we have seen, and declared it to be an ordinance of God's appointment; but when the Sadducees endeavoured to discredit the doctrine of the resurrection of the body by pointing out a perplexing situation to which it might lead under the Jewish marriage law, He declared that, 'when they shall rise from the dead, they neither marry, nor are given in marriage; but are as angels in heaven' (Mk 12[25]). Clearly this was an announcement of a resurrection life very different from the present life in flesh and blood. It implies the possession of a body more spiritualized than the present one, and adapted to conditions far removed from those of our earthly life. And what was thus foreshadowed by Christ's words was ocularly proved to His disciples by His post-resurrection appearances. It was the same body they had laid in the tomb which now presented itself to them in living form, so that they could not fail to recognize their Lord (Ac 1[3] 2[32]). And yet it was a different body—freed from the familiar earthly limitations and possessed of new and higher capacities and powers (Lk 24[31. 36. 51], Jn 20[26]). The spiritual had so interpenetrated the natural and subdued it to its own uses, that the natural body of Jesus had become a spiritual body. The invisible world was now its proper home, and it was only when He chose to 'materialize' Himself (as a student of psychical research would say), to 'manifest Himself' (as the author of the Fourth Gospel expresses it, Jn 21[1. 14]), that His disciples were able to perceive Him by their natural senses. It was in this spiritual body that the risen Christ ascended to His Father. And it is this spiritual body of the risen and ascended Christ that becomes for His disciples the type of that glorious body which, in their case also, is to take the place of the present body of humiliation (Ph 3[21]).

3. The Pauline anthropology.—The second great line of evidence comes from the Pauline anthropology. It is here that we find the great bulk of the direct NT teaching on which the Christian doctrine of the body is based. Now, in regard to St. Paul it has often been assumed that his anthropological ideas were determined by Hellenistic influences, and that he sets up a hard dualism between matter and spirit, between body and soul (cf. Holtzmann, *NT Theol.* ii. 14 f.). But so far is this from being a correct statement of his position, that it might rather be affirmed that the Apostle is nowhere more closely in line with the OT psychology than in his teaching on this very subject. For him, too, as for the other writers of the NT, human nature is not an irreconcilable antithesis of matter and spirit, but a psycho-physical unity of soul and body, in which, however, the body, as the part that links man to nature, takes a lower position than the soul or spirit, by which he comes into relation with heaven and God. St. Paul's doctrine will become apparent if we consider his utterances on the relation of the body to sin, to death, to holiness, and to the future life.

(*a*) *The body and sin.*—It is at this point that the argument for a positive dualism in the Pauline teaching, due to Greek influences, appears most plausible. There can be no question that the Apostle often speaks of the body and its members, not only as instruments of sin, but as a seat and fortress of its power (*e.g.* Ro 6[12. 19] 7[5. 23f.])—a way of speaking, however, which is neither Greek nor dualistic, but has its roots in OT teaching, and is the direct result of an acute ethical experience. But it has been further alleged that St. Paul recognizes in the body the very source and principle of sin (Pfleiderer, *Paulinismus*, 53 ff.). The argument depends on the interpretation given to the word 'flesh' (σάρξ) in those passages where the Apostle, passing beyond the ordinary non-ethical use of the word (Ro 2[28], 2 Co 4[11]), employs it in an ethical sense in contrast with 'spirit' (πνεῦμα). According to this argument, σάρξ in such cases simply denotes the physical or sensuous part of man, in which St. Paul finds a substance utterly antagonistic to the life of the spirit, and one whose working makes sin inevitable. But the objections to this view are overwhelming. When St. Paul in Gal 5[19ff.] gives a category of the 'works of the flesh,' the majority of the sins he enumerates—for instance, idolatry, hatred, heresies, envying—are spiritual, not physical or animal, in their nature. When he charges the Corinthians with being 'carnal' (σαρκικοί, 1 Co 3[3]), it is not sensuality that he is condemning, but 'jealousy and strife.' His doctrine with regard to the sanctification of the body, as a member of Christ and the temple of the Holy Ghost (6[15. 19]), would have been impossible if he had regarded the principle of sin as lying in man's corporeal nature; and equally impossible his belief in the absolute sinlessness (2 Co 5[21]) of one who was born of a woman (Gal 4[4]). Nor could he have given so high and constant a place, in his doctrine of the future life, to the hope of the resurrection, if he had conceived of the body as the *fons et origo* of evil in man. He would rather have been driven to long for its utter dissolution, and to centre his hopes for the eternal future in a bare doctrine of the immortality of the soul.

The Pauline antithesis of flesh and spirit, then, cannot be interpreted as amounting to a dualistic opposition between man's body and his soul, his material and his immaterial elements. Here, as everywhere else in Scripture, the real antithesis is between the earthly and the heavenly, the natural and the supernatural. The Apostle uses 'flesh' to denote man's sinful nature generally; and his reason for doing so, doubtless, lies in the fact that by the law of ordinary generation it is through his flesh that the individual is linked on to the life of a fallen and sinful race, and so comes to inherit a corrupt nature. St. Paul's teaching at this point is in line with the great saying of Jn 3[6], 'That which is born of the flesh is flesh; and that which is born of the Spirit is spirit' (cf. Laidlaw, *Bible Doctrine of Man*, 119). St. Paul's 'carnal' man is the same as his 'natural' man who receiveth not the things of the Spirit of God, and is thus distinguished from the 'spiritual' man in whom a supernatural and Divine principle has begun to operate (1 Co 2[14ff.]; cf. 3[1. 3]).

But while St. Paul does not find in the body the very principle of sin, he does regard it as in a special sense the lurking-place and instrument of evil. When he speaks of the old man being crucified with Christ that 'the body of sin' might be done away (Ro 6[6]), when he longs for deliverance from the 'body of death' (7[24]), when he refers to 'the law in our members' which wars against 'the law of our mind' (v.[23]), it seems evident that he recognizes an abnormal development of the sensuous in fallen man, and regards sin as having in a special manner entrenched itself in the body, which becomes liable to death on this very account (Ro 6[23] 7[24]), and throughout man's earthly life is a constant source of weakness and liability to fall. Hence his determination to buffet his body and bring it into subjection (1 Co 9[27]); his summons to Christ's people to mortify the deeds of the body (Ro 8[13]; cf. Col

3[6]); his appeal to them not to allow sin to reign in their mortal bodies, but to present their members as instruments of righteousness unto God (Ro 6[12f.]).

(*b*) *The body and death.*—It is in accordance with those dualistic conceptions which by and by entered into the Church through the influence of heathen philosophy, and which still colour Christian thought as well as Christian language, that death should be spoken of as if it were a liberation of the soul from its bondage to corporeal conditions, whereby it escapes into its natural element of pure spirituality. St. Paul, at all events, never speaks thus about death. His strong sense of the weakness of the flesh and its subjection to the powers of evil leads him, it is true, to describe the body as a tabernacle in which we groan, being burdened. But he immediately hastens to explain, 'not for that we would be unclothed, but that we would be clothed upon, that what is mortal may be swallowed up of life' (2 Co 5[4]). It is not deliverance from the body that he longs for, but the deliverance of the body from the constraint of evil, its complete redemption and transformation, and perfect adaptation in consequence to the life of the spirit. To the Apostle that separation of soul and body which we call death was not something natural, but something profoundly unnatural. According to his original nature, man was not made to die. It was not part of the Divine purpose in his creation that the solidarity of body and soul should ever be dissolved. But the entrance of sin into the world changed every human prospect; and death is the wages of sin (Ro 6[23]). But just as Christ, by His Spirit dwelling in us, can subdue the power of sin, so also can He gain the victory over death—the culminating demonstration of sin's power, and man's last enemy (1 Co 15[26]). In Christ we have the promise of a body not only raised from the grave, but redeemed from the power of evil, and thus capable of the great transfiguration from a natural body into a spiritual body (v.[44]), from 'the body of our humiliation' into a conformity to the body of Christ's glory (Ph 3[21]).

(*c*) *The body and holiness.*—St. Paul's view of the body as an essential part of the human personality is seen further in connexion with his teaching on the subject of holiness. In the Church at Corinth, whose members breathed an atmosphere saturated with heathen influences, there had sprung up the strange, perverted doctrine that, as the body is not a part of man's true personality, all bodily acts are of the nature of *adiaphora*, or things morally indifferent. Fornication stood on the same level as eating and drinking; it was a mere physical act, natural to man as an animal creature, but having no real bearing on the independent and higher life of the soul (1 Co 6[12ff.]). The idea is one that has appeared again and again in Christian history, for dualistic notions regarding the body tend almost as readily to sensualism on the one hand as to asceticism on the other (cf. the Ranters in the days of the Puritan revival; see R. M. Jones, *Studies in Mystical Religion* [1909], 477). The Apostle's answer to all such degrading views was to set up his doctrine of the bodily holiness of a Christian man. The body, he said, is for the Lord, and the Lord for the body (v.[13]); your bodies are the members of Christ (v.[15]); your body is a sanctuary of the Holy Spirit (v.[19]). In his view, the life of the human spirit, by which we are linked on to Christ Himself and to the Spirit of God, is joined indissolubly to that physical life which finds its manifestation in the bodily members. And so, when the Spirit of God takes up His abode in a man, the body of that man, as well as his spiritual nature, undergoes a process of sanctification, as day by day there pass

> 'Through all this fleshly dress
> Bright shoots of everlastingness.'

And yet this exalted view of the communion and fellowship of the body in the spiritual life of man, and its sensitiveness to the powers of sanctification, did not blind the Apostle to the fact, taught him by his own ethical experience, that in the fallen nature even of a Christian man the body is weak and tainted, and ready to become the instrument of temptation and an occasion of stumbling. In this temple of the Holy Ghost there are dark corners where evil spirits linger, and from which they can never be utterly expelled until in death the wages of sin have been paid. If ever there was a spiritually-minded man, St. Paul was one, but even he was deeply conscious of the infirmity of the flesh (Ro 6[19]), and felt the need of subduing his own body, lest, after all, he should become a castaway (1 Co 9[27]). And so, side by side with the truth that the body is a Divine sanctuary, he sets forth in his doctrine of holiness the demand that sin should not be allowed to reign in our mortal bodies that we should obey it in the lusts thereof (Ro 6[12]).

(*d*) *The body and the future life.*—Here, again, two lines of thought emerge in St. Paul's teaching—an overwhelming sense, on the one hand, of the worth of the body for the human personality; and, on the other, a clear recognition of its present limitations and unfitness in its earthly form to be a perfect spiritual organ. The proof of the first is seen in his faith in the resurrection of the body. The Pharisaic Judaism in which he was brought up had come to hold the hope of the resurrection of the dead (Ac 23[6ff.]), but that was a dim and pallid hope compared with the living and shining assurance which Jesus Christ had begotten in his heart. To him the resurrection of Christ was a fact of the most absolute certainty (Ro 1[4], 1 Co 15[3ff.]). And that fact carried with it the knowledge that the dead are raised (v.[12ff.]). When he writes of immortality (1 Co 15[35ff.]), he does not mean, like Plato, the immortality of the soul (*Phædo*, liv. ff.), but the immortality of the whole man. He believed, no doubt, that the soul, as the centre of the personality, could survive the shock of separation from the body (2 Co 5[8]). But he thought of it as existing then in a condition of deprivation and incompleteness, for which he uses the figure of being 'unclothed'; and he does not regard it as attaining to the fullness of the life and blessedness of the future world until its 'nakedness' has been 'clothed upon' (v.[2ff.]). But, while he believed in the resurrection of the body, St. Paul did not believe in the resurrection of the present body of flesh and blood (1 Co 15[50]). He looked for a body in which corruption had given place to incorruption (v.[42]), in which weakness had been succeeded by power (v.[43]), in which what is mortal had been swallowed up of life (2 Co 5[4]), and humiliation had been changed into glory (Ph 3[21]). He was fully alive to the disabilities which the spirit has to suffer from its union with a body that is weak, earthy, and perishable, and his doctrine of the resurrection includes the assurance that when the dead in Christ are raised—of the physical resurrection of others he has little to tell us—it will not be in the old bodies of their earthly experience, but in new ones adapted to a heavenly condition of existence (1 Co 15[47ff.]), bodies that are no longer *psychical* merely, *i.e.* moving on the lines of man's natural experience in the world, but *pneumatical* (v.[44ff.]), because redeemed from every taint of evil and fitted to be the perfect organs of a spiritual and heavenly life.

4. The Christian doctrine of the body.—Taking

the NT as our source and norm, we thus find that the Christian doctrine of the body follows two main lines. (1) There is a recognition of the body as *an essential component of a complete human personality*. In the fullness of his being, man is conceived of not as a purely spiritual entity, but as an embodied spirit. This is the evidence of the Bible from beginning to end—from the story of the Creation in Genesis (2^7) to the Apocalyptic vision of the sea giving up its dead that they may stand before God to be judged according to their works (Rev 20^{13}). It is a doctrine that finds confirmation in the teachings of modern science, alike from the psychical and from the physiological side. For, if physiology has been compelled to admit the presence in man of a spiritual essence which lies beyond the range of its processes and tests, psychology has no less had to admit that the psychical, as we know it, stands in a close and constant relation to the physical. It is in keeping, therefore, with both Biblical and scientific truth that the Christian doctrine of the body should recognize and maintain the rights and dignities of man's physical being for the life we are now living, and should proclaim the great hope of the body for another life which is to come. The body is recognized as having its rights. Its natural instincts are to be treated, not as if they were implanted in us only that they might be suppressed and crushed, but as designed to lawful fulfilments on the lines of that great affirmation, 'All are yours; and ye are Christ's; and Christ is God's' (1 Co $3^{22f.}$). The world belongs to the Christian; and the joy of living in it and opening the heart through the senses to all its pure delights is part of his inheritance. Those natural relationships which lie at the foundation of our social existence, and which depend fundamentally upon our physical constitution—the love of husband and wife, of parent and child, of brother and sister—find a firm sanction in the Christian gospel of the body. And as the rights of the body are recognized, so also are its dignities. Even the present body of our humiliation, with all its weakness, its bias towards evil, its mortality, is sacred—sacred as being an essential part of that humanity which found in Jesus of Nazareth its pure and perfect expression, sacred in a more personal sense because the living Christ enters into it by His Spirit, makes it His temple, quickens it with His own life, and begins the work of subduing it to His own likeness. And the Christian doctrine of the body has also its promise for the future life. For, in the Christian view of the matter, the separation of body and soul at death is an unnatural condition. Without the body, the human soul is deprived of something that belongs to its true constitution, and is incapable of the highest activity and blessedness. From this limitation of his capacities and powers man is to be delivered by the 'redemption of the body' (Ro 8^{23})—not its resurrection merely, but its complete redemption from all the defects of its earthly condition, involving a transformation and exaltation of its very substance.

There is no place in the Christian doctrine of the resurrection for those crude materialistic ideas, which were once so general, of a restoration of the selfsame particles of which the earthly body was composed. The spiritual body is to differ widely from the natural body (1 Co 15^{37}). An inherent identity, it is true, must connect them, or we could not speak of a resurrection at all; but the identity will be one of vital principle and organic form, not of material substance, as St. Paul seeks to show by his figure of the grain of wheat which dies and springs up again to more abundant life (v. $^{36f.}$). The body of the risen and exalted Jesus is at once the promise and the type of the spiritual body in the case of His people (vv. $^{23. 49}$, Ph 3^{21}).

(2) But with all its emphasis on the rights and dignities and glorious prospects of the body, the Christian doctrine fully recognizes that *man's physical nature is his lower part*, that it is subject to evil tendencies, that it needs to be steadily subordinated to that higher life of the spirit by which we are brought into conscious relation with God. The world, which appeals so mightily to man's senses, is of much less value to him than the life of his own soul. His natural relationships, however dear, the very life of the body itself, however precious to the self-preserving instinct—all must be surrendered to the higher claims of the Divine Kingdom. Of these great truths Jesus Christ was the solemn prophet; by these He shaped the steps of His own earthly career; His body nailed to the Cross of Calvary was the tremendous example of their reality. The body, in short, has its duties as well as its rights; and it is always its duty to be the servant of the spirit. In the interests of the body, Christianity has sometimes had to raise its testimony against the exaggerations of a one-sided spiritualism, but it is much more frequently called on to protest, in the interests of the soul, against a materialistic way of envisaging our life in the world. There was a time when monastic asceticism, with its contempt for the body, became a positive danger to the Church. The danger now lies rather in a cult of the body which threatens the very life of the soul, whether that takes the form of a craze for athleticism and games which leaves little room for the growth of intellectual and spiritual interests, or of an æstheticism absorbed in the culture of the finer senses and in a pursuit of 'art for art's sake,' or of that mere vulgar love of pleasure by which, in all ages, the heart has been drawn away from the love of God. The Christian doctrine never fails to remind us that the body needs to be watched and curbed, and sometimes to be subdued. It warns us that, even in the case of those in whom the work of bodily sanctification has begun, the day of bodily redemption still lies in the future. It is hardly so optimistic in its view of the present relation to each other of the two parts of human nature as to say with Browning, in 'Rabbi Ben Ezra': 'Nor soul helps flesh more, now, than flesh helps soul.' On the contrary, it recognizes the truth to ethical reality that lies in the teaching of Jesus Christ and of His great Apostle as to the soul's perpetual primacy, and the need for a constant and vigilant superintendence of the body's promptings. But it looks for a day of perfect reconciliation, when the two elements of human nature, now so often at variance, shall at last perfectly accord, and the redeemed body shall be the ready organ and the exact expression of the informing soul.

J. C. LAMBERT.

BODY (Egyptian).—i. Man.—1. What we understand by 'body' was to the Egyptians simply the last and heaviest of the material coverings which together form a human being. The flesh, *aufu* ('flesh' in the sense of the sum of the physical elements that compose the human body), was neither of a different nature nor of a different texture from the other elements contained within and completing the person. All the elements possessed weight and were perceptible, though in varying degrees; and if on ordinary occasions they were not all visible or palpable, that was simply a circumstantial detail and not due to any essential difference. Magic often enabled men to see and handle these elements.

The *ka*, or 'double,' for example, was only a second body enclosed within the *jait*, lighter, more subtle or more airy, but composed, piece by piece, of the same elements as the body proper. The texts that refer to the future life (see DEATH, etc. [Egyptian]) prove conclusively that the *ka* in the other world was constituted, in every detail, like the body of flesh which it had occupied on earth.

The *ḫaibit*, or 'shadow,' was also only a third kind of body, still more airy, still more subtle, yet of the very same structure as the first two elements of the series.

The *khu*, or 'ghost,' long misled Egyptologists, through their relying upon hymns or over-refining texts of the Theban period. Books of pure magic or of funeral magic show us that the *khu* was originally only a kind of body, still more agile perhaps than the other three, and practically similar to the body attributed to *jinn* and fairies in the wonderful literature of the Arabs, or to the body that the modern Bantus suppose to exist inside the body of flesh.

The list is not exhausted by these four names: the primitive Egyptians, like a number of modern uncivilized peoples, had a very complicated idea of the human body. A striving after simplicity came only as the slow result of very long periods of effort; and the point at which we first gain clear impressions of the notions cherished by the Egyptians is still, in spite of the antiquity of the texts concerned, far removed from the starting-point. Glimpses of the primitive notions are caught and they have been re-constructed, but there is no direct contact with them. By the time of the historical period several of the multiple bodies composing a single being had been eliminated by speculation or by experience; and it is hard to conjecture, for example, what the *sâhu* can have been. It is to no purpose that the theology of the Thebans (and with it several Egyptologists of our day) thinks to find in it a designation of the 'spiritual body,' opposed in eschatology to the double, the shadow, or the soul. There are also very distinct traces in the ancient texts of an earlier time when the *ḫaït* and the *sokhim* were two of the bodies of the living man. But as yet we do not know clearly what was their exact nature.

The conjunction of all these bodies made a human being. What we call death was only the sunderance of them, and was always ascribed, as among primitive peoples, to some violent cause, arising from the personal act of an evil being (see art. DEATH). What kept all these bodies together in a unity during life was something more subtle, lighter, more active than any of them, something which constituted, at least approximately, the *personality* or the *self*. There is no race that has not tried to penetrate more or less into the definition of the latter; and there is no inquiry that has given rise, in primitive religions, to speculations so strange and, sometimes, so painfully complicated. As for the Egyptian, he thought to find its nature and power in what he called the *ran*, which we translate so unsatisfactorily by the word 'name.' The 'name'—we must be content to use this very ambiguous equivalent—is quite different from the body, since the whole series given above is only, as has been said, a sort of 'gamut' of increasingly fluid bodies.

The nature of the 'name' in itself is too important to receive due treatment here incidentally. The theory of the 'name' is in reality the fundamental basis of more than half of the religious ideas of Egypt. It will be discussed fully under art. NAMES (Egyptian). Here we shall merely say as much regarding it as is necessary in order to understand the Egyptian 'body.'

As far at least as we can gather, 'names' were originally what we may call 'kernels' of energy, vibrating, perhaps luminous (of course, material), distinct from and incapable of dissolving into one another. They had their own peculiar vitality, in the midst of the great chaotic mass of primordial things. The solar theologies, such as that of Heliopolis, revised and corrected by that of Hermopolis and Amarna, regarded them as originally emanations, vital waves proceeding from the rising sun. These entities, distinct and irreducible, then 'clothed' themselves, so to speak, in more or less visible or weighty coverings, which are these bodies of which we have spoken, the heaviest and most material of the latter being what we moderns mean by the 'body.' How was this 'clothing' brought about? Was it by a kind of solidification of the cosmic dust which somehow condensed the materials of physiological life round the 'names'? If Egypt seems to have had a confused idea of some answer of this kind, she naturally could formulate it only haltingly, with incoherences and *lacunas*, like so many strange systems of primitive or uncivilised peoples in other parts of the world. The historical period tried to introduce some appearance of cohesion into the existing system. It got hold of the early legends about the cosmogonies and, amongst them, of the legend of the god Thôth. Thôth (= *Ṭahuti*, 'the Speaker') had 'proclaimed' the world. The sounds of his voice had attracted round about their groups of syllables coverings of flesh and bone, of wood, of stone, or of other substances; and the whole together had constituted the creation. Thus revised by theology, the nature of the 'name' became something less fantastically barbarous; on closer examination, the *ran*, or 'name,' was something like a bundle of energetic waves, 'rhythmic' waves, with their special characteristics—and particularly 'numbers,' which the voice can reproduce if there is 'attunement.' One cannot help remembering that, many centuries later, Pythagoras made 'numbers' the basis of his system, and it is only reasonable to wonder what part ancient Egypt played in this.

The theology of Hermopolis claimed that, after the creation organized by the 'names,' the world of bodies and beings thus set in progress continued and reproduced itself by its own activity. This theology is too indefinite for our taste. Perhaps this is due mainly to the fact that nine-tenths of the Egyptian religious writings that we possess to-day treat only of gods or of the other world. The information we get from such texts is enough, however, to let us see that the vital principle of the body, this *ran*, which constitutes the inmost essence and the personality, *pre-existed* before the body and its physiological elaboration by the parents of the new being. We do not know very well where it came from according to the idea of the Egyptians, or what it was before the existence of a body for it to inhabit. But we gradually arrive at an understanding, by studying the birth-ceremonies (or the ceremonies of the coronation of kings, which give them a new soul), and we get a glimpse of the combination of vital and celestial energies from which it apparently arose. Horoscopes, or the supposed relations between the condition of the world at the birth of an individual and his 'name'; the care taken to determine the pronunciation of the name conferred on a newborn child according to the natural phenomena in evidence at his appearance; the anxiety to connect the syllables, whose pronunciation thus makes his 'self,' with divine persons, with 'names' of gods—these things all enable us, if not to re-construct Egyptian thought as a whole, at least to imagine almost exactly what it was. At the birth of a child the Egyptian sought by every means to discover to which group of higher forces the 'name' belonged which had just formed the person of the new being. He aimed at reproducing with his voice its vibrations and pronunciation, so as to join it again, in incantations or prayers, to the higher beings whose protection must be obtained or whose destiny must be pursued.

And as the Egyptian tried to do this for his own children, so he also tried to get to know the 'names' of the gods or of formidable beings. The hermetical books, or the books connected with the treatment of the dead, taught these names; and those who knew them exercised indisputable power over those who bore them (see art. NAMES [Egyptian]).

The 'name' and the series of 'bodies' (the body of flesh, the double, the shadow, the ghost, and the *sâhu*) together constituted a complete being. These were not, however, enough to form a *living* being. As yet there was only a being capable of living, only the *possibility* of life. In these religious systems, what we shall call, for want of a better name, the 'exercise of life' does not result *ipso facto* from the junction of the body or bodies with the soul or what takes its place. It is the product of forces peculiar to the being to be animated, and it is enough if the being that these powers are going to animate is completely fitted to receive them. This is shown very clearly, moreover, by reference to the statues—those artificial bodies—fashioned by the hand of man, which are nevertheless treated in Egyptian religion precisely like real bodies. The most ancient rituals show us that it was usual to perform a series of magical operations to enable the eyes of a statue to see, its ears to

hear, its nose to breathe, its mouth to eat, and the other organs to fulfil their functions. And if the historical period has preserved only traces—though certain traces—of many of these old rituals, it has at least kept intact the long ceremonial of 'the opening of the mouth' (*uap-ro*). We need not study these rituals here, since they deal only with artificial bodies created by religion for the service of its gods, its kings, or its dead, or with bodies made by the magicians for the service of their 'magic spells': dolls or images of men and animals in wax, wood, earth, etc., made into 'living bodies' by the sorcerers, the thaumaturgists (cf. Rollin, Harris, Leyden, and Turin Papyri). But the way in which the Egyptians conceived the necessity of enabling a statue to use its organs, after making a soul enter into it, is nevertheless a proof of what it is of interest to keep in mind for our present study, viz. that the union of the animist principle, *ran*, with its coverings was not enough to initiate life.

Life itself (*aonkhu*) was the result of the entrance into the body of those vital breaths which exist in all Nature, and which the air carries and the breeze (*nifu*) wafts to the faces of beings. They enter by the nostrils, not by the mouth. Like the majority of African races at the present day, the Egyptians breathed through the nose; and in their language the breath of the nostrils was synonymous with life. It is always to the nose, and never to the lips, that the gods or kings in iconography hang the chains or bundles of 'handled crosses,' which are intended to signify, by a play of pictorial words, the breaths of life. Thus they penetrated within the coverings which constitute the body. It was supposed that there they mixed with the blood, in the form of a kind of gas or bubbles, and circulated by the blood-vessels through the whole human system. Under their beneficent influence, the 'vessels swelled up and worked regularly.' Life accordingly served to maintain the conjunction of the various bodies adjusted within each other and the 'name.' It was, therefore, as necessary to the 'name' as to the series of bodies.

We usually translate the Egyptian phrase *sonkhu ran* by 'give life to the name of. . . .' The translation is somewhat poetical and seems to be connected with ideas familiar to us. But it is only an approximation. The literal sense is 'make the *self* breathe the breaths,' and this leads us to conceptions far removed from ours.

2. Once we leave the medical point of view, Egypt has preserved very few details as to her ideas of the body during its existence on earth. For although we have from the point of view of medicine a veritable superfluity of documents (we need only note among others the Berlin, Ebers, and Amherst Papyri, and those found by Petrie in the Fayyūm), the other Egyptian writings have little to do with the *living* body. All the moral and religious literature is exclusively occupied with what happens to the body at its physical death, with whatever has a bearing on burial, funerals, or fate after death. The popular tales or the writings of pure magic remain as a relative source of information on the subject.

It could hardly be otherwise with a religious civilization which evolved the above-mentioned conception of life and of individuals. Bodies composed in the way described cannot, either in rituals or in treatises, be brought into connexion with subjects that bear on ethics, morals, or the respective values or opposition of the soul and the body. Theories like asceticism, for example, or systems of the type of metempsychosis, avoid by their very definition the Egyptian thought of the classical period. Hence the information as to the living body that we derive from the monuments and the religious texts of Egypt will be confined to specifications as to how the body may be affected by disease or cured (and this belongs to the domain of medicine); or how the body is to be adorned, clothed, or tatued (and this is almost exclusively a matter of archæology); or incidentally we shall find detailed information about such and such a part of the body, and about such and such a group of religious ideas or pure superstitions attached to a specified organ. Thus, in connexion with a special literary episode or magical operation, the texts tell us in passing what the Egyptian ideas were in regard to the various specified organs of the body; and these are the only particulars that are of any interest in our present study.

We need not attempt to give a full account here. Certain elements of the body are scarcely mentioned by the Egyptians outside of medical treatises. In the latter, on the other hand, we find long lists of 'the twenty-two vessels of the head, the two vessels of the breast,' etc. As regards the rest of the writings, when it is said of the *heart* (*ḥāti*, lit. 'the beater') that it is opposed in the economy to the *liver* (*nashmit*, lit. 'the motionless'), the entire subject is exhausted, or nearly so. Of other members or organs we know a little more. Thus, the *eyes* have a special magical power; they fascinate and overpower by the fluid they dart forth; they repel harm or evil spirits if they fix on them first; magic by philtres and spells can increase their keenness exceedingly—even to the extent of enabling its favoured ones to see what the eyes of mortals do not in ordinary circumstances distinguish: invisible spirits, characters written inside a sealed roll, and innumerable other things. The *mouth* is an ever possible entrance for demons, phantoms, and spirits, who are always prowling round people and trying to get into their bodies. The magic or cognate writings carefully note this constant danger, and it is undoubtedly one of the strongest reasons that led the Egyptian to breathe by the nose. It is well known that, amongst many uncivilized peoples, kings and chiefs have a great aversion to being seen during meals. A long time ago the true explanation was offered—an explanation based on primitive ideas, namely, the dread lest spirits and malignant influences might enter by the mouth. It is very probable that the Egyptians shared this fear; and if conjecture is right, although it cannot be proved formally for the kings, the idea is clearly seen in the anxiety displayed in the meal served almost secretly in the interior of the *naos* to the living bodies which are the statues of the gods.

Other parts of the system are the seats of more distinct manifestations or principles. The integrity and healthy state of the *bones* are apparently one of the conditions essential to the harmonious working of the vital functions. The Egyptians seem to have had a strange idea that the disorganization of the system attacked by illness or death began in the bony structure, the marrow of which constituted somehow or other a vital reserve of special force. But this special point has received little attention as yet, and what has just been said is suggested with the greatest reserve, pending more minute study of the ancient religious texts.

We are a little more certain, on the other hand, of the Egyptian idea that the *top of the vertebral column* was the precise point at which certain magic fluids or certain energies could penetrate into the body. The bestowal of the vital or healing fluid (*sâ*) by the gods or their representatives laying their hands on this point of the neck, is a scene reproduced in thousands of examples in the Egyptian monuments; it is enough to mention it here. The *inside of the skull* is the chief *habitat*

of that sort of agile principle which the Egyptian calls *bâ*, and which is represented sometimes in the form of a lapwing or a wading-bird, sometimes in the likeness of a bird with a human head; it was thought sometimes to show itself in the form of a bee. We translate it by 'soul' (*q.v.*); but that is only a rough approximation, given only because it is necessary to have a translation. The *bâ* is neither one of man's bodies nor a kind of radio-active substance like the *ran*; we can hardly compare it to anything but those little genii or 'spirits,' sometimes one, sometimes several, that so many savage peoples locate in the nape of the neck of the human being. The primitive Egyptian believed also—and the texts have preserved the trace of it—that a man had several *bâ* (plur. *biu*) as he had several *ka*. At the historical period, this complicated privilege was reserved for the gods and their heirs. This 'soul,' moreover, was so material that dread gods could sometimes catch it and feed upon it.

All this is only approximate translation, and necessarily so, when we attempt to reproduce in our precise modern terminology material distinctions and ideas conceived according to information and initial data so different from ours. Thus it is usual to translate the Egyptian word *ab* by 'heart,' although the *ab* of the human body is quite a different thing. 'Inside' is a word with a distinctly less dignified sound; but it has the merit of being a more faithful rendering. The *ab* is something not well analyzed, but with exact enough limitations. It is, in short, the belly—meaning by that the stomach and the intestinal apparatus, and to a certain extent the heart, considered from the point of view of shocks which the emotions may cause in it. This 'inside' is the seat of another special kind of 'soul,' distinct from the *bâ* soul. It is an obscure soul, connected specially with all the manifestations of feeling and passions—impulsive, the generator of movements and of good or bad actions. What is certain is that it is a soul with its own peculiar existence and activity. Originally, at least, it existed on its own account—until the time when the progress of Egyptian thought and its striving after psychological unity made it a sort of appendix to the true 'self' (for more detail, see art. HEART). If the Egyptians had precise ideas on its origin, it would appear that the soul of the *ab* was believed to come from the vital substance of the mother (cf. *Book of the Dead*, ch. xxxvi.). The ancient texts published at the present time are not of sufficient number to give us an exact appreciation of the ideas attached to the *jasu* (vertebræ?), the *bakasu* (kidneys?), and the *samiu seiu* (viscera?). We can only guess that some vital reserve force was located in these parts. It was chiefly conceived under the form of 'powers,' 'knowledge of magic names,' and other sensitive or mental manifestations, as material emanations and, to a certain extent, as a kind of special soul.

The rest of the individual is not marked by anything of special interest. The superstitions attaching to the hair, the ears, the teeth, the hands and feet, are only details, and do not bear so much upon the fundamental magic of the religious ideas as upon popular superstition, the contents of which are dissolved and re-fashioned at all periods. We should note only the continual care to protect the various parts of the body, as with magic armour, against the possible attacks of evil spirits: hence the customs relating to amulets, talismans, tatuing, etc., some of which are combined, in the period of civilization, with the taste for physical adornment, and give rise to the greater part of jewellery (necklaces, bracelets, rings, etc.) and perfumery (pastes, paints, unguents, etc.). Circumcision is connected with this group of ruling ideas, but it will be treated in a special article because of its importance (see art. CIRCUMCISION).

To complete our survey of ideas relating to the human body, we note the following: (*a*) The link between the various material bodies may be temporarily broken during the earthly life, under the influence of certain forces voluntarily employed or involuntarily submitted to by man. A magician, for example, can by means of set formulas send his 'ghost' or his 'double' far away to perform some deed or other. Or it may happen to an ordinary mortal—usually during his sleep—that his 'double' leaves his body and shows itself in some other place, in the form of a body of flesh and bones more or less visible and tangible. As among all peoples, dreams and apparitions are the pseudo-experimental proofs of these ideas, and the Egyptian notions about sleep, lethargy, and syncope differ very little from those found almost universally.

(*b*) During the whole of its terrestrial life the body is subject to whatever astral or natural influences prevailed on the day when it made its appearance in the world—and this independently of the influences to which the 'name' is submitted, and of which we have spoken. The calendar, the horoscopes, the thousand particulars noticed at the moment of birth, may serve to determine this influence and, to a certain extent, may make it possible to charm away ill-luck (cf. Sallier Papyrus). The study of them determines what precautions must be taken when the conjunction of evil influences proper to such and such a body shows itself anew.

(*c*) Both during the terrestrial life of the body of flesh and after it, the fragments taken from its substance, its perspiration or its excretions, retain to a certain degree the force of the vital fluid of the whole individual. In Egypt, therefore, as in so many nations, we find those beliefs in the virtues of nail-parings, hair- or beard-clippings, and of the cloth soaked in the perspiration of some individual, which played such an important part in magic and necromancy. The fluid emanation of the living body may even communicate something of the life and powers of an individual to the clothing he has worn, and especially to ornaments, arms or badges that he has had in his hands. This idea, which can be found among several African peoples, appears even more clearly in regard to objects connected with the king's attire. He communicates to them a sort of divine power similar, *e.g.*, to the power given by the king of Dahomey to his cane or his sceptre.

3. A last remark is necessary in connexion with these characteristics of the body among the ancient Egyptians. When investigating the idea cherished by any one of the non-civilized races as to the body, we are able to determine its characteristics accurately enough, because we have under our eyes a population in most cases restricted in number or area, and because, as a rule, we know it only at the very time when we are examining it. But we must not forget that, in the case of Egypt, we are dealing with a civilization which has, in time and space, had several different religions, each with its own evolution. These ideas of the body are distributed throughout a historically ascertained series of thirty-eight centuries, having behind it, according to the traditional texts, a pre-historic mass of documents impossible to evaluate, but certainly the product of a considerable number of centuries. Further, these ideas have never at any one period been the same in the whole of Egypt. The Heliopolitan did not form the same conception of the body as the Theban, the Hermopolitan, or the Mendesian. Consequently it is not the absolute

theory of the Egyptian ideas on the body that is given in this article. It is rather a general view, in which it is possible to shade off or accentuate details, according as one is trying to picture the ideas concerning the body of an Egyptian of the Ptolemaic period, a Saite, a Theban, a Memphite, a Thinite, or a man of the pre-Thinite period of some province in the Nile valley. But if we desire to gather from the whole the essential physiognomy, and to look for the distinct characteristics of the primary notions, we shall come very near an exact expression of the early Egyptian ideas on the body if we say that it is a confused conglomeration of substances similar in nature, but of different qualities, defined as independent of each other, but in fact continually united by the 'name.' The whole is set in motion by a multiplicity of 'spirits,' with no fixed mutual cohesion, and originally peculiar to a certain part or physical manifestation of the individual. Upon the whole, it is a body very similar to what is revealed to us by scientific inquiry (if not alike in every point, at least identical in the main) among the least civilized peoples of our times, such as some specimens of the non-Aryans of India, the Battaks, the Caribs, the most backward of the Bantu group, etc.

ii. **Animate creatures or inanimate objects.**—It would appear that, in a general way, without entering into exact details, the rest of the *bodies* in the sensible world were considered as having the same texture as the human body. This applies not only to animals, but also to vegetables, and even to such things as a stone, a rock, an expanse of water, or any object made by man. The religious, magic, and popular literatures present sure examples with reference to the 'double' or the 'name' of a tree, a pillar, or a staff—to mention only these cases. The only restriction that must be noted is that, since it was dealing with objects of less interest than men, theological speculation took less trouble to describe their nature accurately, and to reconcile the contradictory data of their origin. One thing is certain, viz. that there was no essential difference in the structure of all things in the material world—from the inanimate object to man. All are, *a priori*, of the same organization, down almost to the degrees of their qualities.

iii. **Gods.**—1. In a country like Egypt this same unity naturally applies to divine beings. In fact, there is no dogmatic definition marking off the deity. The gods originate, not owing to the possession of characteristics different from the rest of beings and things, but simply owing to more remarkable manifestations of the actions and forces common to them and these others.

The body of the gods was quite the same as that of men, both in its economy and in its peculiar characteristics. It might be larger, more resistant, more rapid in its movement, more durable, less vulnerable, and more difficult to catch sight of. It was not said to be imperishable, or endowed with ubiquity, or proof against sickness, pain, and wounds. Its substance had the same advantages and defects as the human substance. Its specific characteristics of weight, dimensions, colour, qualities of flesh and bone, do not form the subject of a group of formal theories in any of the Egyptian texts. But the literature and ritual mention innumerable particulars in passing, and these are ample compensation for the omission. The Pyramid texts, for example, or the hymns of the historical period, provide abundant stores of the material in question. On the other hand, contrary to the generally accepted idea, neither the popular tales nor the legendary lore merit any more confidence in this respect, as sources of information on the religious ideas, than would be inspired among us by the more or less entertaining tales that bring in the devil, the saints, or God the Father.

The 'Tale of the Two Brothers' does not clear up the Ennead; the statement of a magic papyrus, that Osiris was more than seven cubits in height, is not an article of faith; and upon the strength of the 'Story of the Old-age of Ra' we are not to believe that the body of the aged sun was made of precious metals, or that the sun-god 'shivered with cold and slobbered.' In the same way, the symbolism of the iconography is not to be taken literally, and gods like Osiris or Amon of Amentit, with black, blue, or green flesh, do not stand for a fact accepted by theology, but simply represent a means of expressing an idea. But this idea, it must be granted, was not always the same. Thus Osiris with the green flesh might, according to the period in view, stand for re-birth, re-verdure, or even for the decomposition of the flesh of dead gods. With this same symbolism, possessed of no absolute value, we may connect also the body of flesh (*aufu*) attributed to the Evening Sun, or the complex body of Osiris of Denderah.

If we leave out of account all these appended or artificial elements, the body of the Egyptian gods seems, on the whole, to have been exactly the same as we have found the body of men to be. The gods have a body of flesh, and they have a shadow, though there is little mention of the latter in the texts (chiefly the shadow of Ra or of Aten). Above all, they have several 'doubles' (*kau*) and several 'bird-souls' (*biu*). It was even held, at a certain time, that they had seven 'bird-souls' and fourteen 'doubles'—this, from all accounts, because of the magic and mystical virtue of these numbers. Their manner of nourishment and of movement, and in general all the functions of their body, are just the same as those we know of for men (leaving out of count, of course, all that has to do with their artificial bodies or 'supports of the double'—their statues). Their extreme swiftness, the keenness of their senses, their absolute dimensions, and their resistance to death are differences of fact, as has just been said, but not of organization. Their longevity was, *de facto*, indefinite, but it was not held theoretically that they were eternal (see DEATH). It was generally thought, at least in Heliopolis, that they drew from 'the basin of the fluid *sa*' one of the secrets of their resistance to death.

2. There remains, however, a problem ill solved, or, rather, ill stated. The human being necessarily possesses only one body of flesh—one single combination of bodies. But we see that the Egyptian god possessed several bodies simultaneously, each one of them animated by some of his 'souls,' and by a part, or rather an emanation, of his 'name.' On the other hand, other texts or pictorial representations seem to imply that the divine beings have only one single combination of bodies. This is an important matter, touching as it does upon questions like the original formation of the gods and totemism.

Historical examination of the religions of Egypt fails to discover any indication that the personality of such and such a god was originally distributed among several bodies. Still less was it distributed throughout the entire species of some animal or vegetable under the characteristics of which this god was represented. On the other hand, it follows from the initial data as to the nature of beings, that the possession of several bodies animated by one and the same 'self' is not at all impossible. The 'name' (*q.v.*), while still remaining *one and entire* in each specimen of a being, may locate itself in several bodies, and in each of them may be one of the momentary subjective 'aspects' of one and the same entity. This is confirmed, in the religious monuments of Egypt, by the various epithets added to the principal name of the god. Each one expresses the detailed, local energy or quality of a distinct body belonging to one and the same god.

Stated in this way, the question becomes above all a question of fact, to which it is not possible to

give one single reply, because the Egyptians themselves have given more than one. We must make distinctions according to the importance of each god, and according to the period in view. Thus the humblest and most ancient gods, restricted to a single manifestation of energy or charged with a single definite and limited act, have no need of more than one body. Such deities as Selkit the Scorpion and Marit-Soghru the Serpent, so far as we know, had only one body. On the other hand, when similar attributes fused two or more deities originally geographically independent into a single god, the new deity thus formed kept as many bodies as it had formerly for the separate gods of whom it was composed. A tree-goddess like Nuit, for example, had as many bodies as there had been tree-goddesses with the same character and same rôle, before the one single Nuit developed.

More important gods originally incarnated in separate persons led to the formation of a deity single in 'name,' but necessarily provided with several bodies. Thus Thōth, at once monkey and ibis, was able to live in several bodies. *A fortiori*, the gods with important national functions or with a cosmogonic rôle, being the product of syncretism, and being the combination of a great number of original gods, animated a sometimes very considerable number of bodies at the same time. An Amon-Ra, conceived as possessing simultaneously the attributes of the demiurge sun Minu, the hawk Harmakhis of Heliopolis, the ram and the gander of Thebes, could not but live a complete unity in each of these varieties of material body.

The series extends then, by previous definition, from the simple single body to the multiplicity that has no limitations. But it is a *historical* fact, and not the outcome of any religious theory. As a rule, there was at first only one body for every divine 'name.' Then the attributes ascribed to certain beings among those regarded as more specially divine grew in importance and brought about fusions. In cases where by elimination (or subordination of the secondary characteristics of the beings originally distinct) the new god completely annihilated the personality of those whom he absorbed, he continued to have only one body (*e.g.* Mihit Oirit). Where, on the other hand, it was impossible to fuse the characteristics of the original gods into a perfect amalgamation (as in the case of Hathor), the composite deity retained as many bodies as it preserved distinct aspects. To enumerate all the possible combinations, it would be necessary to re-construct the whole history of Egyptian mythology. All that it is possible or necessary to explain here is the mechanism; we need not go into all its practical applications.

There is a sort of counter-evidence that the above is the case, and that the possession of a plurality of bodies by the god is only a result of fact, and does not mark a superiority of nature attributed to them dogmatically. We refer to the series of ideal gods imagined by theology. When the latter created deities by systematic deduction or by personification of functions—deities conceived in human form, like Maat or, later, Imhotep—it gave them only one body. Created in a homogeneous manner, they do not require other bodies, no matter how complex or lofty their attributes. The cult of Aten at Amarna and that of Hapi the Nile-god, with apparent divergencies chiefly of a literary kind, belong to this scheme of formation.

In conclusion, the case of the divine animals worshipped in the temples does not conflict with the above view. On the contrary, it indirectly confirms it. It is known that the 'sacred' animals, which, by the way, are a relatively late introduction into Egypt, are not the bodies of the gods, but beings sharing by simple veneration the regard due to the gods. The animal-god worshipped in the sanctuary (*e.g.* Apis, Mnevis, Knumu of Elephantine, Sukhos [Crocodile] of Ombos, the Ram of Mendes) is the only copy, the only true body of the local god on earth—to the exclusion of similar animals. This does not mean that the Egyptians thought they had in the sanctuary the one and only body of the god, but that they had the one and only *duplicatum* of it. In fact, the world was supposed to be divided into two great halves, symmetrical in every part. Each of the great national gods (we need not take the trouble to reconcile so many contradictory data for the lesser gods) had his kingdom in the other world, and in this world possessed a part of Egypt that corresponded to that kingdom. His body dwelt in the other world; but his 'name' animated an exact replica of this body in this human world—a perishable temporary representation, which is the divine animal worshipped in the sanctuary. To the divine cow of Dendereh, to the ram of Elephantine, to the hawk of Ermonthis, *e.g.*, there corresponded in the kingdoms of the other world a cow, a ram, and a hawk really alive, really divine, with bodies fashioned alike, perhaps gigantic, though Egypt has given no precise information on this point. One thing is certain, viz., that they sometimes showed themselves to the eyes of mortals. As to the exact sojourn of the one body of the gods in the other world, it should be said that here again there has been a succession of beliefs. The most ancient of them show us the gods living sometimes in the other world, after the fashion of the world of men, sometimes in the celestial world. The assimilation of earlier and later beliefs in homogeneous groups has gone far in developing the multiplicity of bodies belonging to one and the same god; and the solar theories of Heliopolis, with the course of Ra in his bark, have given far greater importance to the stellar bodies of the divine beings.

LITERATURE.—If we exclude what belongs to medicine, eschatology, and the disposal of the dead, the data as to the Egyptian body are scattered all over the field of Egyptological literature, the *living* body never having been the object of a special monograph. Only a few parts of it have been studied separately, but without synthesis. We may mention specially: Amélineau, *Prolégomènes, à l'étude de la religion égyptienne*, Paris, 1908, p. 403 ff.; Birch, 'On the Shade or Shadow,' in *TSBA* viii. 386; Budge, *Gods of the Egyptians*, London, 1904; Le Page Renouf, 'On the true Sense,' etc., in *TSBA* vi. 494; and esp. Maspero, *Histoire* [tr. 1894–1900] i. 108, 112, 146, 212, 215, 217 (where there are notes giving the principal references); also the first two volumes of his 'Études de Mythologie et d'Archéologie,' in the *Bibliothèque égyptologique*, Paris, 1893.

GEORGE FOUCART.

BODY (Greek and Roman).—1. Anthropological.—(1) *Body and soul.*—Among the Greeks, as among most other races, the distinction between body and soul—the natural dualism of mankind—can be traced to a very remote antiquity. This distinction took shape in the primitive mind as a result of its experience of certain peculiar facts. It is maintained by H. Siebeck,* who on this point differs from such scholars as Rohde and Gomperz, that the most potent factor in the development of this dualism is that succession of inner and outer experience undergone by primitive man—as by the child of to-day—in connexion with his own body. To the undeveloped consciousness the body is at first simply a thing among things, precisely like a stone or a tree. It is only by degrees that the growing mind, in consequence of internal and external sensations, as, for instance, bodily pain or hunger, acquires the idea of the body as the medium between self-consciousness and the outer world. An important constituent of naive dualism, no

* *Gesch. d. Psychologie*, 1880, i. 6 f., with reference to the facts of empirical psychology as discussed by Volkmann, *Lehrbuch d. Psychologie*, 1876, ii. § 106.

doubt, lies here; and so far Siebeck is right. But a number of other factors, which, to be sure, Siebeck does not ignore, must also be taken into account; as, for example, the ofttimes rapid transition from life to death, the experience of dreaming, or of fainting, 'possession,' sudden emotions and their resultant involuntary actions, and, finally, the ecstatic trance. These were also the facts which in the dawn of Greek history generated the idea of a possible *separation between body and soul*; thus the soul might well seem to be temporarily withdrawn from the body in the case of dreaming, swooning, or ecstasy, and permanently so in the case of death, when the body returns to its original elements.*

The distinction between the visible and corporeal man and his invisible indwelling *Doppelgänger*, the ψυχή, is presupposed also in the Homeric poems. Here, however, the ideas of body and soul have assumed a special complexion. All the activities, mental or other, of the human personality, such as feeling, thought, volition, exertion, are regarded as being possible only so long as body and soul are united; in fact, they are in the strictest sense functions of the body. μένος, νόος, μῆτις, βουλή, and θυμός also, are bodily faculties or powers, and although they can assert themselves only while the *psyche*, at once the 'second ego' of man and the principle of his animal life, remains within him, yet they are in no sense evolved from the inherent capacities of the soul as such, which has absolutely no share in the waking activities of man.† The spiritual and psychical faculties which are localized in the various organs, and especially in the diaphragm (φρένες) of the living person, appertain entirely to the body. The idea of a life apart from the body, *i.e.* independent of the union of body and soul, simply lay outside the range of Homeric thought. Here it is the body rather than the soul around which the supreme interest circles—a phenomenon quite intelligible in a naive and frankly sensuous age, free as yet from all reflexion about a possible closer relation between body and soul in a living and waking man. Hence even the lifeless body is repeatedly spoken of as the true self (αὐτός), and set in contrast with the *psyche*.‡ A well-known passage is *Iliad*, i. 3 f.: πολλὰς δ' ἰφθίμους ψυχὰς Ἄϊδι προΐαψεν ἡρώων, αὐτοὺς δὲ ἑλώρια τεῦχε κυνέσσιν οἰωνοῖσί τε δαῖτα (cf. also xxiii. 65 f., 105 ff.). (Now and then, it is true, the *psyche* that is speeding towards Hades, or already dwelling there, is distinguished by the name of its erewhile living possessor, or, it may be, is even spoken of as if it were himself in person (cf. Rohde, i. 5 f.); but the latter idea is largely evanescent in the mind of the poet.)

(2) *The dead body.*—Of the cult of the dead which at one time prevailed throughout the Hellenic world, as elsewhere, the Homeric poems show isolated traces only; and it is one of the enduring triumphs of Rohde to have discovered these and set them in their proper light. The ideas underlying this cult, which, though but faintly recognizable in Homer, was universally diffused among the Greeks in the post-Homeric age, and in fact down to the end of the ancient period, invested even the *dead body* with a certain interest. The soul of the departed was supposed to be fettered to the resting-place of its former bodily integument. The worship of ancestor or hero had its seat in the place where his bones had been laid. There alone—with some special exceptions—did the soul continue in an active state.

* *Iliad*, vii. 99, xxiv. 54.

† Taken purely by itself, the soul has at best a shadowy existence, not worthy of the name of 'life' at all, and destitute even of the attribute of self-consciousness.

‡ It is a significant circumstance that Homer has no proper term for the *living* body. His usual word for it is δέμας, which, however, connotes only the figure, the outward visible form; cf. δέμας πυρός. In Homer σῶμα always denotes the *dead* body.

According to Homer, however, whose notices regarding the cult of the dead are sporadic and imperfectly understood even by himself, the soul of the departed finds no rest (in Hades) till the corpse is burned. So long as this act is neglected, the soul still retains a consciousness of events upon the earth; while, once the body has been cremated, the soul is banished to the depths of Erebus. The original purpose of the practice of cremation, in fact, was to guard against the return of the released soul to the land of the living—an idea, however, which has become quite obscured in Homer. The paramount interests of the poet, indeed, lie with those who still enjoy the light of the sun, and not with the dead at all. In his unsophisticated mode of thought, he regards—all unconsciously—the living and waking man with his bodily and mental attributes as a single whole, and similarly all the spiritual and psychical activities of man are evolved from the *body*. So far, therefore, the Homeric point of view, as contrasted with that of the philosophers and theologians of a later age, may be called an unreflective monism.

2. Religious and ethical.—(1) *Orphism.*—Homeric views regarding body and soul, and their relation to each other, find their sharpest possible contrast in the ideas which, germinating in the ecstasy of the Dionysan cult and the psychical experiences evoked there, or, again, in the principles of *katharsis*, received their definitive form among the Orphic sects. According to the latter, there obtained not only an irreconcilable dualism between body and soul, but also a profound difference in value. The soul was no longer, as in Homer, the phantom counterpart of the man, making its influence felt in the acts of dreaming, swooning, or dying; it was now regarded as intrinsically of Divine origin, uncreated and imperishable, and as having been immured within the body in expiation of its guilt.

See Plato, *Cratyl.* 400 B C (Diels, *Frag.*[2] II. i. 473, No. 3; cf. Abel, *Orphica*, frag. 221): καὶ γὰρ σῆμά τινές φασιν αὐτὸ (the body) εἶναι τῆς ψυχῆς ὡς τεθαμμένης ἐν τῷ νῦν παρόντι· καὶ διότι αὖ τούτῳ σημαίνει, ἃ ἂν σημαίνῃ ἡ ψυχή, καὶ ταύτῃ σῆμα ὀρθῶς καλεῖσθαι· δοκοῦσι μέντοι μάλιστα θέσθαι οἱ ἀμφὶ Ὀρφέα τοῦτο τὸ ὄνομα, ὡς δίκην διδούσης τῆς ψυχῆς, ὧν δὴ ἕνεκα δίδωσιν, τοῦτον δὲ τὸν περίβολον ἔχειν, ἵνα σῴζηται δεσμωτηρίου εἰκόνα. Cf. *Phædo*, 62 B, and Diels, in reference to Philolaos, frag. 14 and 15. The body is accordingly the grave or prison-house of the soul, which in its present life is in a state analogous to death. It is therefore the aim of the Orphics χωρίζειν ὅτι μάλιστα ἀπὸ τοῦ σώματος τὴν ψυχὴν καὶ ἐθίσαι αὐτὴν καθ' αὑτὴν πανταχόθεν ἐκ τοῦ σώματος συναγείρεσθαί τε καὶ ἀθροίζεσθαι (*Phædo*, 67 C; cf. Diels on Heraclitus, frag. 115).

(2) *Pythagoreanism.*—In regard to the process by which such ideas, so alien, apparently, to the natural temperament of the Greeks, as of mankind in general, gained a footing in Greek thought, the reader may consult the art. ASCETICISM (Greek). It will be sufficient here to emphasize the fact that the ideas in question, wholly un-Hellenic as they may appear, exerted a profound influence upon many Greek philosophers, and even, as we may infer from what has been said (above, p. 81), upon early thinkers like Pythagoras and his disciples. Definite evidence of this influence, it is true, first emerges in the case of Philolaos (*c.* 440 B.C.), who, in referring to the Orphics, writes as follows: μαρτυρέονται δὲ καὶ οἱ παλαιοὶ θεολόγοι τε καὶ μάντιες ὡς διά τινος τιμωρίας ἁ ψυχὰ τῷ σώματι συνέζευκται καὶ καθάπερ ἐν σώματι τούτῳ τέθαπται (frag. 14; cf. the passages given by Diels in connexion with frags. 14 and 15). We need not be surprised, therefore, to find Archytas (*c.* 400–350 B.C.) making allusion to the battle against sensual pleasure (ἡδονή, the *voluptas corporis* of Cicero) (cf. Diels, *Frag.*[2] i. 252, 30 ff.), which the early Pythagoreans

regarded as the worst of plagues, impeding the soul in its endeavours to reach its celestial home, and causing it to forget its high descent.*

That Empedocles likewise held a similar theory of the relation between body and soul may be inferred from what is said in ASCETICISM (Greek) (above, pp. 81[b], 82[a]) regarding his indebtedness to Orphism and Pythagoreanism. Direct reference to the point, however, is found only in a single fragment of his writings (126, cf. Diels): *σαρκῶν ἀλλόγνωτι περιστέλλουσα χιτῶνι*. We may well suppose that similar views were cherished by several other thinkers and poets who were more or less influenced by Orphic or Pythagorean doctrines. This was certainly the case with Pherecydes of Syros.† In Heraclitus also (frag. 4. 96) we may trace a certain disparagement of the body, though he does not, like the 'theologians,' regard body and soul as antagonistic to each other, but rather as subsisting in a state of constant interchange (frag. 36; cf. 76, 77). Adumbrations of this idea are also found in Pindar (frag. 131, Böckh).

(3) *Plato*.—It was a matter of vast significance, however, that the cardinal ideas of the Orphic-Pythagorean schools should have been assimilated by Plato, and wrought into the fabric of his philosophy. The way in which the founder of Western idealism interpreted the relation of the human body to the imperishable soul is known to every reader of the *Phædo*. As we have already given, in the art. ASCETICISM (Greek), a brief exposition of the leading ideas in Plato's system of philosophical and theological thought, we confine ourselves here to the most indispensable points.

The human soul occupies a peculiar position between the sensible and the supersensible world. Though itself uncreated, *i.e.* of Divine origin, it is drawn into the vortex of becoming. It does not rank as an Idea, but is at best 'most like' one, participating in the Idea of life. In the pre-mundane existence of the soul, while dwelling amongst gods and spirits like itself, it has beheld the 'super-celestial realm,' and the world of real being, but in consequence of a decline in its cognitive faculty, and an ascendancy in its impulses of desire, it has been drawn down to the earth, and has fallen into corporeality.‡ Particulars will be found in the famous allegory in *Phædrus*, 246 B ff. But although body and soul are fundamentally disparate in character, the body and its impulses exert a strong and persistent pressure upon the immortal sojourner within. By the time when the soul enters upon its earthly life, it has completely forgotten its pre-existence and the world of Ideas in which it formerly lived. Its knowledge of truth is now impeded by the illusory impressions of sense-perception, while the body, by means of its impulses, and the desires and affections to which they give rise, wields a most dangerous influence over the soul, deranging its capacity for thought, and wholly perverting its judgment regarding the true good.

Cf. *Phædo*, e.g. 64 ff., especially 66 B-D: . . . . *ἕως ἂν τὸ σῶμα ἔχωμεν καὶ συμπεφυρμένη ᾖ ἡμῶν ἡ ψυχὴ μετὰ τοιούτου κακοῦ οὐ μή ποτε κτησώμεθα ἱκανῶς οὗ ἐπιθυμοῦμεν· φαμὲν δὲ τοῦτο εἶναι τὸ ἀληθές. μυρίας μὲν γὰρ ἡμῖν ἀσχολίας παρέχει τὸ σῶμα διὰ τὴν ἀναγκαίαν τροφήν· ἔτι δὲ ἄν τινες νόσοι προσπέσωσιν, ἐμποδίζουσιν ἡμῶν τὴν τοῦ ὄντος θήραν· ἐρώτων δὲ καὶ ἐπιθυμιῶν καὶ φόβων καὶ εἰδώλων παντοδαπῶν καὶ φλυαρίας ἐμπίμπλησιν ἡμᾶς πολλῆς, ὥστε τὸ λεγόμενον ὡς ἀληθῶς τῷ ὄντι ὑπ' αὐτοῦ οὐδὲ φρονῆσαι ἡμῖν ἐγγίγνεται οὐδέποτε οὐδέν· καὶ γὰρ πολέμους καὶ στάσεις καὶ μάχας οὐδὲν ἄλλο παρέχει ἢ τὸ σῶμα καὶ αἱ τούτου ἐπιθυμίαι. διὰ γὰρ τὴν τῶν χρημάτων κτῆσιν πάντες οἱ πόλεμοι γίγνονται, τὰ δὲ χρήματα ἀναγκαζόμεθα κτᾶσθαι διὰ τὸ σῶμα, δουλεύοντες τῇ τούτου θεραπείᾳ, κ.τ.λ.* Cf. 83 B-D.

Irrationality, fierce passions, grave disorders of the soul, may in fact proceed from the body or from the conditions that at any time prevail therein (cf. especially *Timæus*, 86 B ff.). In sober truth, the body is the source of all that harms the soul. For although evil may be the soul's own act, she would have no promptings to evil-doing were she not imprisoned in the body (cf. Zeller, II. i. 871). Every misfortune, every guilty deed in human life, emanates in the last resort from the latter. As a result of her union with the body, the soul herself becomes polluted, and, in fact, unless she resists the propensities of the flesh, she may even assume a *quasi*-bodily character (*σωματοειδές*, cf. *Phædo*, 83 D), just as the sea-god Glaucus was deformed by wrack and shells to the point of unrecognizability. In this way the majority of mankind are drawn aside from their true end in life. For the fall into the corporeal state lays upon the soul the task—in reality her only task—of purging herself as effectually as possible, even in this life, from the contamination induced by her connexion with the body (*Phædo*, 67 C D), by overcoming and keeping permanently in subjection not alone the impulses of sense, but all appetites and affections whatever: she must, in a word, strive after an inward deliverance from the world of the flesh and the senses. Only so does she become free to apply herself to those imperishable treasures beside which the visible world dwindles to nothingness; only so can the soul yield herself to that philosophy which, by means of dialectic and in virtue of her 'reminiscence' of things aforetime seen, develops her faculty of cognizing the sphere of true being, of the Ideas, so leading her into the right way towards her proper home and at last to God Himself.

Such in outline is the doctrine of Plato—a harsh and rigid dualism: here, the world of illusion and illusive values, beneath which nothing permanent exists; and there, the goods which never fade away, and which constitute the whole aim and object of philosophy. This dualism was, it is true, somewhat mitigated in Plato's later life (see above, p. 83[a]), but again and again in innumerable passages of his works, even in the *Timæus*, where its presence involves a flagrant inconsistency, it breaks forth in triumph.

The speculations of Plato, aided as they were by the incomparable literary craftsmanship with which he gave them expression, had an enormous influence on subsequent thought. His dualism, and in particular his view of the body as the ultimate root of all, or at least of innumerable, evils in human life, as an enemy against which the soul must fight, and as an unclean and defiling thing from which she must rid herself as soon and as thoroughly as possible, produced a profound effect even upon such of the ancient thinkers as did not accept the Orphic-Pythagorean-Platonic

* Cf. Diels, *Frag.*[2] i. 252, 30 ff., 230, 44 ff., 238, 12 ff.—Sensual pleasure, by later writers frequently spoken of as *ἡδονὴ σωματική*, to distinguish it from spiritual pleasures, was vehemently repudiated, not only by the adherents of a rigidly dualistic anthropology, but also by the Cynics and the Stoics. The body being the source of pleasure, we find Xenophon (*Memorab.* i. 2. 23) insisting upon the necessity of constant exercise in *σωφροσύνη*. On the other hand, Aristippus, the founder of the Cyrenaic school, declared sensual pleasure to be a good, though with certain qualifications (Diog. Laert. ii. 90; Zeller, II. i. 356 ff.). The high value ascribed by Epicurus not merely to pleasure in general, but even—in spite of all his saving clauses—to bodily gratification, as the source of happiness, is tellingly shown in frags. 67, 70, 409 (Usener). His standpoint is far removed from that of Plato, and we need not wonder that Posidonius in particular so vigorously assailed his doctrine.

† Diels, *Frag.*[2] II. i. 505 f. No. 5; see also Gompers, i. 71 f.

‡ Its entrance into the body is the result of an 'intellectual fall'; for, according to Plato's original view (in the *Phædrus*), the soul, even in its pre-mundane state, had three *εἴδη*, *i.e.*, not only the *λογιστικόν*, but also the *θυμοειδές* and the *ἐπιθυμητικόν*, of which the last two cramp the first, and, still clinging to the soul after death, are the cause of its attachment to the world of sense and its tendency to further incarnation (*Phædo*). On the other hand, according to the *Timæus*—a much later work—the entrance of the soul into the material realm takes place in pursuance of the Divine order, being designed to animate the world of the visible. On this interpretation the two inferior capacities of the soul arise out of its union with the body, ust as again they pass away with the latter at death.

doctrine of the soul. We may also venture to assume, notwithstanding the absence of positive testimony, that a theory regarding body and soul akin to that of Plato prevailed in the Old Academy. It is at all events certain that such a view was held by Xenocrates (frag. 20 H), as well as by Philip of Opus and Heracleides Ponticus, and probably even by Aristotle in his earlier years.

(4) *Aristotle.*—With riper experience, however, Aristotle abandoned his master's dualistic standpoint, save in regard to one important feature, and advanced to an entirely different conception of the relation between body and soul, a conception which stands in the closest connexion with his metaphysical teaching about the relations of matter (ὕλη) and form (εἶδος), of potentiality (δύναμις) and actuality (ἐνέργεια, ἐντελέχεια). Here we come upon the pregnant idea of the 'organic,' which Aristotle was the first to formulate. An object is said to be organic when its parts are 'instruments' (ὄργανα) for the realization of the end for which the nature of the object as a whole is designed. A whole of this character, however, is manifestly framed with a view to life or animation, and accordingly the organic and the animate are but different designations for the same thing. The human body, as indeed the body of any ζῷον, attains its realization only in virtue of the soul. The soul is the εἶδος (the principle of form working from within outwards) σώματος φυσικοῦ ζωὴν ἔχοντος δυνάμει (*de Anima*, ii. 1. 412 A, 20 ff.). The 'end' of the body is the soul, which realizes itself, and at the same time realizes life, in the body and its organs (*de Partibus Animalium*, i. 5. 645 B, 14 ff.). Apart from the soul the body is but a corpse. It is therefore the entelechy of the body . . . οὐ τὸ σῶμά ἐστιν ἐντελέχεια ψυχῆς, ἀλλ' αὕτη σώματός τινος, καὶ διὰ τοῦτο καλῶς ὑπολαμβάνουσιν οἷς δοκεῖ μήτ' ἄνευ σώματος εἶναι μήτε σῶμά τι ἡ ψυχή (*de An.* ii. 2. 414 A, 14 ff.); cf. ii. 4. 415 B, 7, ἔστι δὲ ἡ ψυχὴ τοῦ ζῶντος σώματος αἰτία καὶ ἀρχή. Body and soul in a living man may well be distinguished as concepts, but they cannot be dissociated in actual fact. The two form an inseparable synthesis, like the material and the form of a ball of wax, or like the eye and the sense of sight. In the words of Eucken, 'the soul forms with the body a single life-process.' When man dies, his body is deprived of its function as a purposive organism.*

The idea of a dissonance between body and soul, as propounded by the theologians and Plato, is therefore quite foreign to the philosophy of Aristotle. It is true that the latter regards the νοῦς, the thinking spirit, as coming from without (θύραθεν) to the 'soul,' to that life-giving power which controls and conditions the organism, and combines within itself the physical and the psychical; and here no doubt we come upon an inconsistency in the Aristotelian psychology, a residue of theological and Platonic speculation. Nevertheless there is for Aristotle no opposition between the νοῦς and the living body, so that the presence of the former constitutes no end in human life relative to the body.†

(5) *Stoicism.*—Among the earlier Stoics, notwithstanding their monism, we find a certain leaning towards the dualistic theory of body and soul. A characteristic utterance is that of Cleanthes (*Stoicor. Veter. Fr.* i. fr. 529 [Arnim]), who speaks of man as a frail and fleeting thing, needing help at every turn

καθάπερ τροφῆς καὶ σκεπασμάτων καὶ τῆς ἄλλης τοῦ σώματος ἐπιμελείας, πικροῦ τινος τυράννου τρόπον ἐφεστῶτος ἡμῖν καὶ τὸν πρὸς ἡμέραν δασμὸν ἀπαιτοῦντος καὶ εἰ μὴ παρέχοιμεν ὥστε λούειν αὐτὸ καὶ ἀλείφειν καὶ περιβάλλειν καὶ τρέφειν νόσους καὶ θάνατον ἀπειργοῦντος.

The truly decisive step, however, was first taken by Posidonius (first half of the 1st cent. B.C.), the second leader of Middle Stoicism, upon whom the influence of Plato is once more clearly marked (cf. p. 85ᵃ). He holds that the body, that *inutilis caro* * *et fluida, receptandis tantum cibis habilis*, is an impediment to the heaven-born soul, pining in her prison-house for her ethereal home. To deliver the soul as far as possible from the body even in this life, to shun as the pestilence the lusts and appetites that originate in the body—this is the paramount task of mankind. The body acts as a clog upon the Divine capacity of knowledge possessed by the spirit, which, however, escapes its bonds and wins an ampler insight in dreams, when the body lies asleep as if dead, as also in ecstasy, when the soul forsakes the body, but fully and finally in death itself. At death the soul of the wise, no longer in thrall to the sensuous, will soar to the celestial sphere, and will gain a profound knowledge of the ultimate causes of all existence. On the other hand, the soul of one who has given a loose rein to the lusts of the body must after death long pursue a wandering course, and must undergo manifold pains and purgings. But the soul's conflict with 'this flesh' is protracted and sore, and calls for unflagging effort.†

The Platonic mysticism of Posidonius wrought with great effect upon Cicero, and with greater still upon Seneca. But although the writings of Seneca frequently reflect the dualistic theory of Posidonius, from whom in fact he borrows freely in numberless passages, his own view differs in some degree from that of the Greek thinker. Seneca's theory probably finds its best expression at the beginning of the 14th letter to Lucilius:

'Fateor insitam esse nobis corporis nostri caritatem. Fateor nos huius gerere tutelam. Non nego indulgendum illi: serviendum nego. Multis enim serviet qui corpori servit, qui pro illo nimium timet, qui ad illud omnia refert. Sic gerere nos debemus non tamquam propter corpus vivere debeamus, sed tamquam non possimus sine corpore. Huius nos nimius amor timoribus inquietat, sollicitudinibus onerat, contumeliis obicit. Honestum ei vile est, cui corpus nimis carum est. Agatur eius diligentissime cura, ita tamen, ut cum exiget ratio, cum dignitas, cum fides, mittendum in ignes sit.' Cf. *Ep.* 78. 10; 120. 14–18.

There is something very peculiar in the depreciation and contempt with which the human body is regarded by Epictetus, whose views of mankind in general, notwithstanding his Stoic principles, reveal a strong tinge of dualism. Over and over again the *Dissertations* reveal a curious scorn of the body, and, in fact, as we might expect, from the influence of Cynicism upon Epictetus, he often gives a crudely Cynic expression to the ideas promulgated by Plato and Posidonius. A telling instance of this is found in frag. 23. The body is by nature dead, mere clay and filth; irretrievably abandoned to innumerable vicissitudes, to all, indeed, that happens to be 'stronger'; it is a hindrance to our independence of the external; it does not belong to us, but is an ἀλλότριον. Man is

* The teleological point of view was first applied to the human body by Diogenes of Apollonia, through the influence of Anaxagoras. It is set forth in popular form by Socrates in Xenophon, *Memorab.* i. 4. 5 ff., and in a truly scientific style by Aristotle, *e.g.* in *de Partibus Animalium*, iv. 10. 686 A, 25 ff., 687 A, 7 ff. Popular views regarding it re-appear after the middle period of Stoicism; cf. Cicero, *Nat. Deorum*, ii. 134–146.

† As regards Aristotle's physiology, which we cannot deal with here, it may be noted that he regarded the activity of the soul as being connected with the natural heat of the body, this heat being combined with the blood as the animating breath or πνεῦμα. Aristotle placed the central organ of psychical life in the heart, while Alcmæon, Democritus, and Diogenes of Apollonia, like Plato, had identified it with the brain. The influence of Aristotle long prevailed to keep the earlier and correct view in the background.

* So Seneca (*Ep.* 92, 110) renders the Greek σάρξ, a word which seems to have been applied to the body in a disparaging sense first of all by the Orphics (cf. Empedocles, frag. 126; Wilamowitz on Euripid. *Herakl.* 1269). This usage is next found sporadically among the Tragedians; also in Plato and Platonizing thinkers.

† Cicero, *Tusc. Quæst.* i. 33, 44, 110, *de Leg.* i. 60, *de Div.* i., *de Rep.* vi.; Virgil, *Aen.* vi. 724 ff. (on this see Norden); Seneca, *Ep.* 65. 16 ff.; 92. 110; 102. 23 ff., *Quæst. Nat.* i. 8 f., iii. 18, *ad Marc.* 23 ff.; Galen, *de Plac. Hipp. et Plat.* v. 448 f. (Müller).

'a soul carrying a corpse.' To the wise man, indeed, his body is of no concern.* Above all, the body is a permanent obstacle to happiness, since it stands in the way of virtue, which is in reality the only good. Something more than the influence of Plato or Posidonius, or of the Stoa, is required to explain such hatred of, and disdain for, the body as we find in Epictetus; and it is possible that his experiences with his own decrepit frame may have given some bitterness to his sentiments.

To the high-souled Marcus Aurelius likewise, though, like Epictetus, he was a professed adherent of Stoicism, there exists a keen antagonism between body and soul, and he too speaks repeatedly of the body in tones of passionate scorn. He reprobates it especially as the source of carnal appetite, and as tending to inveigle the soul. He welcomes death because, among other reasons, the soul, whether she then 'is dispersed,' or becomes extinct, or is re-absorbed into the universal soul, is at least released from the body (Stich, 71, 4 ff.). A markedly dualistic tendency appears also in his general views regarding man, though he rejects the belief in a continued personal existence after death.

(6) *Neo-Pythagoreanism and Neo-Platonism.*—Another evidence of the persistent influence of Posidonius, and through him of Plato, upon a later age is to be seen in Neo-Pythagoreanism, which became widely diffused throughout the ancient world, especially in the first three centuries of our era. It has already been shown (above, p. 86) how in this school the Orphic-Pythagorean-Platonic conception of the body as the prison of the soul, conjoined with the notion of matter as the cause of all evil, was resuscitated in intensified form. Similarly, as regards Neo-Platonism (Plotinus), we would refer the reader to the account given on former pages (86[b], 87[a]), merely supplementing it here with an instructive passage regarding mankind from *Enneads*, 47. 10 K:

. . . *διττὸν οὖν τὸ ἡμεῖς, ἢ συναριθμουμένου τοῦ θηρίου ἢ τὸ ὑπὲρ τοῦτο ἤδη· θηρίον δὲ ζῳωθὲν τὸ σῶμα· ὁ δ' ἀληθὴς ἄνθρωπος ἄλλος ὁ καθαρὸς τούτου τὰς ἀρετὰς ἔχων τὰς ἐν νοήσει, αἳ δὴ ἐν αὐτῇ τῇ χωριζομένῃ ψυχῇ ἵδρυνται, χωριζομένῃ δὲ καὶ χωριστῇ ἔτι ἐνταῦθα οὔσῃ, κ.τ.λ.*

(7) *Popular ideas.*—Popular notions about the relations of body and soul, and about the nature and functions of both—such ideas, namely, as actually took shape among classes of Greek and Roman society outside the influence of philosophy and theology—were practically identical with those of Homer, according to whose simple and unschooled thought the living man forms an undivided unity of matter and spirit. It was only in a later age that, among the Romans in particular, wider circles of society, especially in the large towns, came to be infected with Epicurean and materialistic views, holding that the soul, being but a more subtle matter diffused through the body, and forming the incorporating principle of life, perishes with the material frame. The harshly dualistic theory of human life, however, allied with the conviction that the body is a thing impure and obnoxious,—as enunciated by Plato and Posidonius, by Seneca and Plotinus,—had a potent influence upon ancient, and thence upon mediæval, Christianity, and indeed its effects persist even to the present day.

W. CAPELLE.

* For the sake of one's fellow-men, however, and on grounds of good taste, bodily cleanliness, in contrast to the slovenliness of the Cynic, is urgently insisted upon (iv. 11. 9 ff.).

BODY (Hebrew).—To the Hebrew, man was a unity. 'Man's body was of the dust, whilst the breath of God was the principle of life within him; but man himself was the single product of these two factors' (F. C. Porter, 'The Yeçer Hara' in *Yale Bibl. and Sem. Studies*, 1901, pp. 91–156). Jewish theology never seriously admitted a dualism. Even when it adopted the doctrine of the 'two impulses,' the good and the evil *yetser* (יצר), the good impulse did not inhere in the soul, the bad in the body. 'The parallel between St. Paul's contrast of spirit and flesh, and the Rabbinic contrast of the good and evil impulses, is remote and insignificant' (*ib.*).

The same conception of unity is expressed in many ways. 'Three partners there are in the formation of man: God, father, mother' (Bab. *Niddah*, 31*a*). Even more significant is the well-known parable of the Blind and Lame:

'A human king had a beautiful garden, in which were some fine early figs. He set in it two watchmen, one lame and the other blind. Said the lame man to the blind, "I see some fine figs, carry me on your shoulders and we will get the fruit and eat it." After a time the owner of the garden came and asked after his figs. The lame man protested that he could not walk, the blind that he could not see. So the master put the lame man on the blind man's back and judged them together. So God brings the soul and casts it in the body [after death] and judges them together' (*Sanh.* 91*a–b*).

Body and soul thus form one whole, and the persistence in later Jewish thought of the belief in the bodily resurrection was in part, at least, due to the impossibility of separating body and soul, even in the aspect of immortality.

The wonderful structure of the body, its delicate adaptations to ends, was the subject of admiration as an expression of the Divine wisdom. This finds its analogue in the liturgy of the Synagogue in a remarkable benediction, which is recited daily in the morning prayers, and is repeated after the normal functions of the body:

'Blessed art thou, O Lord our God, King of the universe, who hast formed man in wisdom, and created in him many orifices and vessels. It is revealed and known before the throne of thy glory, that if one of these be opened, or one of those be closed, it would be impossible to exist and to stand before thee. Blessed art thou, O Lord, who healest all flesh and dost wondrously' (Singer, *Authorized Daily Prayer-Book*, p. 4. The benediction is Talmudic: *Berak.* 60*b*).

Though the Jews, especially from the Maccabæan period, were strongly opposed to the Greek games and culture of the body, and felt an especial aversion to nude exposure, they had a keen appreciation of physical beauty, not only in women, but in men. The stature of Judas Maccabæus was glorified, and the beauty of various Rabbis is specially recorded (especially Joḥanan b. Nappaḥa, *Berak.* 20*a*; cf. Emil G. Hirsch's remarks in *JE* ii. 617). In the mediæval Heb. poetry (imitating the language of the Song of Songs) there is at once a thorough-going eulogy of female beauty and an application of sensuous phraseology to the mystic relations between man and God.

The body was in the Rabbinic view originally a shapeless mass (*golem*); it was a-sexual, or rather bi-sexual, and only later became differentiated (see the early chapters of the Midrash, *Genesis Rabba*). The number of the limbs (or bones) was calculated as 248, and of nerves (including sinews and even blood-vessels) 365, corresponding to the affirmative and negative precepts of the Law (which were enumerated as 613). Adam's dust was taken from all quarters of the globe (*Sanh.* 38*a*), to express the unity of human nature.

The provision of food, drink, and attire was regarded as a religious duty (Maimonides, *Mischne Tora*, '*Deôth*' v.). Bodily cleanliness was similarly regarded; and as part of the 'Law of Holiness,' dietary restrictions and ablutions were prescribed. From the middle of the 2nd cent. A.D. hand-washing before meals became general. Washing in the early morning was older. During ablutions pietists would avert their eyes from their own bodies. The bodily secretions were not unclean until they separated from the body; in the latter case ablution was rigidly enforced. Special communal baths have always been provided in Jewish settlements. The Biblical conceptions as to the defilement caused by dead bodies were continued in later Judaism. But the great bulk of the early Rabbinic laws as to ritual purity applied only to priests or to Israelites about to participate in Temple rites. Maimonides sums up the Rabbinic rulings as follows (*ib.* '*Tumath Okhelim*' xvi. 9):

'It is permitted to every one to touch an unclean thing, and thereby to become unclean. For Scripture only forbids priests and Nazirites from becoming unclean by touching a dead body: hence it is inferred that everybody else may become unclean. And even the priests and Nazirites are only forbidden to become unclean through a *human* corpse. Every Israelite is enjoined to be clean at the time of the festivals, in order that he may be able to enter the temple, and eat holy food' (Montefiore, *Hibbert Lectures*, 1892, p. 476, note 4; Büchler, *Der Galiläische 'Amha'areṣ*, chs. i.–v.).

Some exalted ideas in relation to the body and its stature and proportion were derived from an anthropomorphic interpretation of the text that man was made in the image of God (Gn 1[27]). The bodily sign of the covenant is discussed under CIRCUMCISION.

LITERATURE.—Besides sources already noted, see L. Löw, *Die Lebensalter in der jüd. Literatur*, 1875; M. Joseph, *Judaism as Creed and Life*, 1903, p. 364; art. 'Body in Jewish Theology,' in *JE* iii. 283.

I. ABRAHAMS.

BODY (Hindu).—The Sanskrit terms denoting the various parts of the body agree remarkably with those of the other Aryan languages—a circumstance which renders it probable that a certain knowledge of anatomy may have been part of the common heritage of Aryan nations. Their acquaintance with anatomy would seem to have extended to the internal organs, such as the heart, liver, lungs, bile, kidneys, etc. The ancient Hindu sages have improved and extended this traditional knowledge. Thus, in a hymn of the Atharvaveda (x. 2) on the creation of man, which is supposed to belong to the most ancient portion of that venerable collection, we have a careful and orderly enumeration of the several parts of the skeleton. The hymn consists of a series of questions, such as these:

By whom were fixed the two heels of man? By whom was the flesh constructed? By whom the two ankle-bones; by whom the slender digits; by whom the apertures; by whom the two sets of long bones in the middle? How did they (the *devas*, or gods) make the two ankle-bones of man below, and the two knee-caps above? How many *devas*, and who among them, contributed to build up the bones of the breast and the cartilages of the windpipe of man? How many disposed the ribs of the two breasts; who, the shoulder-blades? Who pierced the seven apertures in the head: the two ears, two nostrils, two eyes, the mouth? Whoever first constructed that brain of his, the brow, the facial bone, the cranium, and the structure of the jaws, and, having done so, ascended to heaven—who, of the many *devas*, was he?

The composition of this hymn is ascribed to a certain sage called Nārāyaṇa, the same to whom the famous Rigvedic hymn (x. 90) on the sacrifice of man (*puruṣasūkta*) is attributed, in which the four classes of priests, nobles, husbandmen, and serfs are declared to have sprung from the mouth, arms, thighs, and feet of the Primeval Male, or original source of the universe. Some ancient medical formulæ, which occur in some of the earliest Sanskrit tracts on medicine, are also supposed to have been proclaimed by this Nārāyaṇa.

Descending from the Vedas to those early pantheistic compositions, the Upaniṣads, we meet, in the *Garbha* (or *Embryo*) *Upaniṣad* with an interesting description of the constitution and growth of the human body, which is said to consist of the five elements—earth, water, fire, air, and space or ether. From cohabitation, a small compact mass is produced, which, within a month, becomes a solid lump of flesh. The head is formed after two months; the feet are developed after three months; the ankles, belly, and thighs, after four months; the spine, after five; mouth, nose, and eyes, after six months; the soul (*jīva*) enters the fœtus in the seventh month; it becomes altogether complete in the eighth month.

The later systems of philosophy assign to each person two bodies—an exterior or gross body (*sthūla-śarīra*), and an interior or subtle body (*sūkṣma-śarīra*, or *liṅga-śarīra*)—much as Pythagoras claimed a subtle ethereal clothing for the soul, apart from its grosser clothing when united with the body. Indian philosophers had to admit the existence of a subtle body, in order to make the process of migration after death intelligible, according to the Indian doctrine of metempsychosis. The subtle body is that which cleaves to the soul in its migration from existence to existence. According to the Vedānta system, this subtle body arises from the so-called *upādhis* ('conditions'), and consists of the senses of the body (*dehendriyas*), both perceptive (*buddhīndriyas*) and active (*karmendriyas*), and of mind (*manas*), intellect (*buddhi*), sensation (*vedanā*), implying beyond itself the *viṣayas*, or objects required for sensation. Its physical life is said to be dependent on the vital spirit (*mukhya prāṇa*), and on the five *prāṇas*, or specialized spirits. According to the Sāṅkhya system, the subtle or inner body, which is, of course, invisible, is formed of eighteen elements. The coarse material body consists either of the earth only, or of the four or five coarse elements, and is made up of six coverings—hair, blood, flesh, sinews, bones, and marrow. In some systems, each organ is connected with its own peculiar element, the nose with the earth, the tongue with water, etc.

The whole subject of anatomy is treated at great length in the vast medical literature of ancient India. The Indian theory of the skeleton, in particular, has been transmitted to us in three different systems, one of which, the anatomical system attributed to the mythical sage Ātreya, while agreeing in the main with the statements quoted above from the Atharvaveda, is also found in several later non-medical Sanskrit works, notably in the celebrated law-book of Yājñavalkya. In its original shape, as restored by the researches of Dr. Hoernle, this enumeration of human bones seems to have been made up of the following thirty items:—(1) 32 teeth (*danta*); (2) 32 sockets (*ulūkhala*) of the teeth; (3) 20 nails (*nakha*); (4) 60 phalanges (*aṅguli*); (5) 20 long bones; (6) 4 bases of the long bones; (7) 2 heels; (8) 4 ankle-bones; (9) 4 wrist-bones; (10) 4 bones of the fore-arms; (11) 4 bones of the legs; (12) 2 knee-caps; (13) 2 elbow-pans; (14) 2 hollow bones of the thighs; (15) 2 hollow bones of the arms; (16) 2 shoulder-blades; (17) 2 collar-bones; (18) 2 hip-blades; (19) 1 pubic bone; (20) 45 back-bones; (21) 14 bones of the breast; (22*a*) 24 ribs; (22*b*) 24 sockets of the ribs; (22*c*) 24 tubercles fitting into the sockets; (23) 15 bones of the neck; (24) 1 windpipe; (25) 2 palatal cavities; (26) 1 lower jaw-bone or chin; (27) 2 basal tie-bones of the jaw; (28) 1 bone constituting nose, prominences of the cheeks, and brows; (29) 2 temples; (30) 4 cranial pan-shaped bones:—total, 360. The large excess of this number over the some 200 bones in the adult human skeleton, which are distinguished by modern anatomy, is principally due to the fact that, besides including

the teeth, nails, and cartilages in the category of bones, the Indian sages counted prominent parts of bones, such as are now known as processes or protuberances, as if they were separate bones. Allowing for these modifying causes, the views of the early Indian anatomists are surprisingly accurate, which seems to be due to the fact that they were acquainted with the practice of human dissection, allowing bodies to decompose in a river, and taking them out after decomposition had set in, when they were very slowly scrubbed with a whisk made of grass-roots, or hair, or bamboo, or bast, and every part of the body examined, as it became disclosed in the process of scrubbing.

Besides the bones, there are 210 joints (*sandhi*) in the body. The joints of the extremities, jaw, and vertebræ are movable (*chala*); all the rest are immovable (*sthira*). There are 900 ligaments (*snāyu*), *i.e.* sinews and nerves; 500 muscles (*peśī*); 700 veins (*sirā*). Besides the veins, there are other vessels or canals called *dhamanī* and *srotas*, all of which proceed from the navel, which resembles the root of a water-lily, and is the root of the vessels of all living animals. This notion seems to have been derived from the appearance of the vessels in their fœtal state. There are six principal limbs: the two arms, the two thighs, the head with the neck, and the trunk or middle portion. Attached to these are 56 minor limbs. The trunk contains 15 organs, such as the heart, the liver, the lungs, the spleen, the two breast-glands, the bladder, the smaller intestines, the larger and grosser intestines, the adeps-bearing duct, etc. There are in the body 10 *añjalis* (a certain measure consisting of two handfuls) of water, 9 *añjalis* of juice (*rasa*), 8 *añjalis* of blood, 7 *añjalis* of stools, 6 *añjalis* of phlegm, 5 *añjalis* of bile, 4 *añjalis* of urine, 3 *añjalis* of adeps, 2 *añjalis* of fat, 1 *añjali* of marrow, ½ *añjali* of brain, ½ *añjali* of the essence of phlegm, ½ *añjali* of semen. Of weak or sensitive parts (*marman*) in the body, which have to be avoided in operations, there are 107, which are accurately described. In some varieties of these, instant death ensues on their being wounded; in others, the person when wounded dies after a few days, or when the external substance has been extracted; in other varieties, lameness, or only pain, is produced. The seven essential parts or elements of the body (*dhātu*) are: chyle or juice (*rasa*), blood (*rakta*), flesh (*māṁsa*), fat (*medas*), bone (*asthi*), marrow (*majjā*), and semen (*śukra*). When there is inequality of proportions between these constituent elements of the body, the person becomes subject to pain or destruction. Hence that has to be regarded as the proper medicine which restores the elements simultaneously to their normal condition by diminishing the increased and increasing the diminished ones. For keeping up the harmony of the elements of a person in health, food is prescribed in various forms, endued with proper attributes. The three humours of the body—air (*vāyu*), bile (*pitta*), and phlegm (*kapha*)—are more important even than the seven elements for the preservation of a healthy and normal condition of the body. Of these humours (*doṣa*), air or wind is dry, cool, light, soft, and always flowing more or less quickly, so as to convey the elements or essential parts over the body; bile, which is situated principally in the stomach, is a hot, bitter, oily fluid, of a blue colour, and sour, and produces animal heat; phlegm is white, heavy, oleaginous, cooling, moist, sweet, and is conveyed by air through the vessels. Most diseases are due to an abnormal increase or decrease of one of the humours. There exists an unmistakable similarity between this Indian theory and the ancient Occidental theory of four humours in the human body. Blood (*rakta*) is sometimes mentioned as a fourth humour in India, as it is in Western medicine.

The supposed parallelism between the microcosm and the macrocosm is also to be found in Indian thought. Thus, as the universe consists of earth, water, heat, air, ether, and Brahman, which is unmanifest, even so Puruṣa, or the male, is said to be made up of six ingredients: the form is earth; the liquid secretions are water; the animal heat is heat; the life-breaths are air; the hollow places are ether; the inner self is Brahman. The self or soul is an emanation from God or the Universal Soul, from which it springs in the same manner as sparks do from a red-hot ball of iron.

J. JOLLY.

BODY AND MIND.—1. The problem of the relation between body and mind has occupied philosophers and scientists since the dawn of thought, and to many it appears no nearer to solution now than then. It has been named the central problem of all philosophy, fundamental alike in the theory of knowledge, in ethics, and in religion. Not less fundamental, however, is it for psychology and for physical science; for the point of view from which we regard mental development, the changing forms of nature, animal life and evolution, will be radically different according as we do, or do not, attribute to mind a controlling or directing part in the process of change and growth. The question of the *relation* between body and mind cannot be discussed apart from the question as to the *nature* of the two factors, and the difference between them. Both are really metaphysical questions; that is to say, the solution put forward will necessarily be incapable of scientific verification; but it should be such as to give a rational account of the possibilities of knowledge, of individual and race progress, of ethical and religious life.

2. Whether we are dealing with the special relation between the individual mind and the individual body, or with the general relation of finite mind to matter, there are three possible solutions of the problem:—(1) That matter or body is the 'real' or 'substantial' thing, while mind is its product, or in some way dependent upon it both for its existence and for its qualities—the solution of Materialism. (2) That mind alone is real or substantial, and that matter or body is its appearance, its manifestation, or in some other way dependent upon it for existence and quality—the solution of Idealism, and of Spiritualism. (3) That mind and matter are equally *real*, and independent entities; or equally *unreal*, as the two 'aspects,' 'appearances,' 'sides' of one and the same reality. The former is Dualism, the latter 'Scientific Monism' or the Philosophy of Identity. There are of course many shades of difference and many overlappings in the different views that have actually been held. The divergencies are especially apparent when a given principle is applied to the relation between the finite body and the finite mind. Thus, even when we regard body as unreal, it is clear that 'my' body is not the manifestation of 'my' mind, but is to a large extent at least independent of it; therefore one may quite well speak of 'my' body —meaning the mind of which the body is a manifestation,—as acting upon 'my' mind, and yet remain a spiritualist or idealist. Here then we have a second basis of division, the lines crossing

the former ones: the relation between finite mind and finite body may be either (*a*) that of *complete dependence*, as when the mind is regarded as the 'secretion of the brain,' or as an 'epiphenomenon,' a by-product of physical process; (*b*) that of *parallelism*, the two series, mental and bodily, corresponding step for step, element for element, with each other, but never acting upon each other; or (*c*) that of *reciprocity* or *interaction*, mental processes being the condition of bodily, bodily of mental processes. The last is the 'natural' standpoint. We regard ourselves as causing bodily movements by our will, and as receiving sensations and perceptions from physical objects which act upon our bodily organs. It is also the standpoint of Dualism on the one hand, and of several forms of Spiritualism or Idealism on the other.

3. It is necessary here to refer only to one of the many forms of Materialism, that in which the mental is regarded as an *effect* of physical processes, although in itself immaterial; or again as not strictly an effect, but as a by-result, an accidental accompaniment, of material processes. Matter—the physical universe—is upheld on this theory as the permanent, eternal, unchanging, over against which mind is as one of the changing and temporary phenomena, adding nothing to the whole, forming no essential part of it, existing merely, as it were, for the delectation of some imaginary spectator. (1) What is fatal to any such reduction of mind to a secondary place is the first principle of Epistemology, viz. that matter or body is given only as *idea* or *content of consciousness*; it cannot be the *source* of that which is a presupposition of its own existence. It is an actual inversion of the true order of things, therefore, to place matter first and mind second. Not only is it not a justifiable inference that matter may be the source of mind; it is not even a possible thought; it is a form of words without meaning. (2) The second difficulty the view has to face is that of the incomparability of mind and matter; they contain no common characteristic except that of change in time; in other respects, as the Cartesians pointed out, every attribute of mind may be denied of body, and *vice versa*. Thus matter occupies space, has form, resistance, etc., while mind is wholly non-spatial in itself, has neither place nor any other spatial determination. Applied to our present question, the disparateness of mind and body means that the one could not be a cause of the other, in the sense of its source or origin. It does not necessarily mean, however, that the one could not *act* upon the other. The objection applies on the materialist assumption that nothing is real but matter; if so, then the psychical must be a quality, or other determination, of body. It is this consequence that is inconsistent with the accepted disparity of bodily and mental processes.* (3) The view is also inconsistent, however, with a third characteristic of mental life, the 'unity of consciousness': no possible *physical* process or combination of processes can be pointed to which is an adequate explanation or ground for this fact. The Ego or Subject of mental states, as conscious of its impressions, and of the relations (of succession, etc.) between its impressions, is a presupposition of all knowledge, all perception, and even of all sensation. There is nothing in the nervous system, for example, to which so weighty a rôle can be attributed; there is not even a real unity in the organism at all. In itself, on the materialist's own theory, matter consists of infinite atoms (or other elements) in endless flux, and all unity or combination exists only (*a*) as a physical resultant of the movements of several atoms or groups of atoms acting together upon a single point, or (*b*) as a teleological conception in the mind of an observer. Even the animal organism is not in itself a unity as a physical congeries; it is a unity only by virtue of its sum of physical forces, or by virtue of its (ideal) tendency towards a purpose or end, the mere conception of which implies a mind. Hence there is no unity except for a mind; and any attempt to reduce mind to matter or to a mere effect of matter is self-contradictory.

* Dr. Ward and Professor Binet, from different points of view, have criticised the principle of the disparateness of mind and matter. See reference below.

4. The doctrine of Psycho-physical Parallelism is liable to the same objections. This view implies, as the idea underlying all its forms, that (1) the two series of events, mental and physical, run alongside of, but in independence of each other; there is no cross action from the one upon the other; (2) each moment or state of consciousness has a physical moment which 'corresponds to it'—its correlate in the bodily sphere. The theories of parallelism diverge, however, from this point. (*a*) To some *every* physical event or state has its mental correlate (universal animism), while to others the mental 'corresponds' only to certain specialized physical structures and processes, viz. those of a nervous system, and in particular those occurring in the cortical centres of the brain of the higher animals. The parallelism is to some limited, to others unlimited. (*b*) To some again, not every mode and characteristic of consciousness has its physical correlate, but only the elementary states—the sensations, feelings, etc.; while the syntheses, activities, and above all the *values*, norms, ideals, 'meanings' of mental life have no physical correlate. To others the parallelism is universal on this side also. (*c*) To some there is causal activity within each series, bodily producing or effecting bodily process, and mental mental, but body not affecting mind, nor mind body; while to others there is no causality in the *mental* series at all, changes of mind depending on the changes of body, with which they directly correspond.

5. A number of scientists and psychologists, including Wundt and Jodl, would limit the *extent* of parallelism. Mind is correlated with body, but only under certain conditions, or where a certain complexity of organic structure—a central nervous system like that of man—has been achieved in the course of evolution and development. Others, among whom are Fechner, Spencer, Haeckel, Höffding, and Paulsen, make the parallelism universal: mental life is the correlate of bodily life, mental change of bodily change, that is, of movement. Hence, wherever there is motion there is also mind, and wherever there is mind there is also physical motion. The two series, as Spinoza taught, are parallel throughout the whole extent of each; for every mental there exists a physical correlate, for every physical a mental; the motion of the atom or other physical element has, as its 'inner' side, a phase of feeling, of sensation, of will. The complexity of the human mental life is in direct correspondence with the complexity of the physical substratum, the nerve and brain organs and the processes that occur in them. There is unbroken continuity first of all in the 'evolution' of inorganic forms, next in that of plant and animal forms, and finally in the development of the individual organism; and this holds both of body and of mind. Thus in mind we pass from the simplest 'feeling,' the correlate of the atom-movement, to the highest thought or act of intelligence, the correlate of a process in the cortex of the hemispheres of man, without a change of kind. Causal relations nowhere exist, however, between the one series and the other.

6. There can be little doubt that for a parallelist theory the larger scheme is the more consistent. In *partial* parallelism we have continuity in the

physical series, where every event depends upon a previous physical event out of which it arises; on the mental side there is no such continuity, but while the psychical processes are occasionally connected with each other in continuous trains of thought, etc., there are on the other hand constant breaks or gaps in the series. In sleep or other forms of unconsciousness, in the animal life prior to the growth of the higher brain centres, in the transitions from one line of thought to another—in all these cases, there are stages of unconsciousness between, or prior to, the conscious moments. How, if we keep only to the mental series, are these gaps bridged—through what causal agency are the transitions made? The answer must be, either through the body, or through some constant supernatural agency or 'pre-established harmony.' The latter alternative will not readily be accepted by scientists, and as a matter of fact the former is frequently adopted, as by Huxley, for example, although it is inconsistent with the principle of parallelism. Wundt, on the other hand, although partial parallelism is put forward as a 'working hypothesis,' finds himself compelled, when in his Philosophy he attempts a *rationale* of mental life as a whole, to postulate continuity between the successive states of the individual mind, to postulate sensation, feeling, and will, not only in the lower organisms, but even in the inorganic world itself. If there is complete continuity on the one side, as Biology and Geology assume there is on the physical, there must be complete continuity also on the other side, the psychical.

7. We have seen that the question of *causality* on the psychical side is also a subject of difference between parallelists. It is admitted that there is relation of cause and effect between successive states of a material system, such as the bodily organism is. Is the same true of the mental series? It would seem that it must be, if parallelism is to hold, but there are heavy penalties to face for the admission. The chain of causes and effects on the physical side is a mechanical one, each link following its predecessor by a blind necessity which is quite regardless of the ideals, desires, or judgments of the mind connected with the body. If causality on the mental side holds, and if each link is attached to its corresponding link on the physical side, then the time-order must be the same in both; therefore the mental life, the course of development, the history of the soul must also be the subject of a blind mechanism; or, *per contra*, if the mind is self-determining, if it has spontaneity and originality of action, freedom to choose and to act according to norms or ideals of value, then the physical organism cannot be subject to the blind necessity that science assumes. Its laws are not inexorable, and the most confident expectations based on centuries of past experience may be suddenly disappointed. In other words, either mental life is wholly determined by an influence which governs it from the beginning of its history, or the attainment of scientific truth about the physical world is impossible.

8. From this dilemma some have sought to escape by denying that there is any causal link between mental states; there is 'transversal' causation, from body to mind, as well as 'longitudinal' causation from body to body, but there is neither longitudinal nor transversal causation in the other two directions, viz. from mind to mind, or from mind to body. In order to justify the very subordinate rôle attributed to the mind, it is argued that the principle of causation demands the experience of a uniform and invariable sequence between cause and effect, and that no such experience is possible with regard to the sequence of bodily upon mental states, or of mental upon mental. In reply it may be said (1) that the origin of the idea of causality is to be found in our direct experience of mental activity, and especially in activity directed outwards upon the body. The first idea of causality (and it remains at the root of the ideas of causality in modern science) is that causation is spiritual or mental; body, on the other hand, is dead inert matter, and has no spontaneity, no source of movement in itself. Accordingly some modern theories of science seek to dispense altogether with the idea of causation. But (2) 'transverse' causality, from body to mind, is inconsistent with parallelism, and means a return to Materialism; it makes mind a function of body.

9. Probably the most consistent form of parallelism is Monistic Parallelism, which regards the physical and the mental as two sides or aspects of one and the same reality. It is not always clear, either in Spinoza, its originator, or in his modern followers, whether by the one reality is meant an unknown x behind both body and mind, of which they are the diverse 'appearances' or 'manifestations,' or whether the reality is simply their identity, the same being which appears *to itself* as a conscious unity—a mind—appearing *to others* as an extended manifold—the body. In either case, as is almost inevitable, the primacy is found to be given to mind. Thus the unknown x becomes a conscious mind. After all we are conscious *both* of our 'own' minds, *and* (through sense-perception) of our 'own' bodies. But our cognition of the body is a mental process, and we become aware of the body only in and through such a process: the mind therefore is a presupposition of the body; the body is a mode or manifestation of mind. Similar reasoning applies to the second standpoint. The body stands in a two-fold relation to the mind: (1) it is the *object* of knowledge, or of a particular kind of knowledge, and (2) it is the accompaniment, the *condition*, apparently, of every case or instance of knowing, or of any other mental process. A given sense-perception has (*a*) its object in the physical world—say the flight of a bird through the air—and it has (*b*) a physiological process in the brain of the individual as its accompaniment and apparent condition. With which of the two is the mental process 'identical'? If with the brain process, then the possibility of knowledge remains wholly unaccountable. The 'knowing' of an external object by the mind is a mental act to which no physical parallel can be given, and therefore mind has a much wider reach than body. It has rarely been suggested that the mental process is identical with the perceived object, in this case the flight of the bird. Schuppe, indeed, attempts to combine both object and brain process with the mental process in an ingenious way: 'I see, because my eye sees, or because I am this seeing eye, so my motor nerve wills, because I will, because I am this motor nerve' (*Das Grundproblem der Psychologie*, p. 60). That is, both sensation and volition, being mental, are also bodily processes, the Ego or mind being identical with the body. I am therefore the same thing as the content of my perceptions, and the same thing as the object of my volitions. But if the connexion between eye and brain is cut, I no longer see, however healthy the eye itself remains; and, again, what I see almost always differs widely from the picture in the retina or in both retinæ. It is not the eye, but eye plus optic fibres plus optical brain centre, that is the 'organ' of sight. Now, whatever similarity there is between the picture on the retina and the seen object, there is none between the brain process and the seen object; hence the dualism between physical *object* of knowledge and physical *basis* of knowledge re-emerges; a mind

stands always in this double relation to body, and therefore cannot be regarded *simpliciter* as identical with the individual organism to which it 'belongs.'

10. Parallelism leads almost of necessity to an atomistic conception of consciousness. The apparent function of consciousness as the uniting and unifying bond of successive mental states or processes has no physical correlate, and therefore must be rejected as unreal. Neither the body nor the nervous system is a unity in itself; each consists of an aggregate of cells, molecules, atoms or other elements. Still less possible is a physical correlate for the freedom, spontaneity, originality, which the individual mind claims for itself; this also, therefore, must be denied. But psychological atomism—'psychology without a subject'—and psychological mechanism alike fail to do justice to the most fundamental facts of consciousness. Consciousness appears neither as a *sum* nor as a *series* of states (cf. James, *Principles of Psychol.* i. 159 ff.; and Lotze, *Microcosmus*, i. 2. 1), but as the unity of such a sum or series—a unity also which is *in* each of the parts, and without which none of the parts or elements could exist. A series which is conscious of itself *as* a series is an absurdity (cf. T. H. Green's polemic against Mill and Hume). It is not necessary to go back to the old view of the Ego as the *source*, the principle or cause, of its own states: but even as the *subject of experience*, every conscious mind is something more than any or all of the 'states' or 'processes' of which it is conscious. In particular, the advance from 'lower' to 'higher' mental achievements, from simple to more complex mental life, as from sensation to perception and from perception to thought, is possible only on the assumption of a directive activity of the mind, an activity which cannot possibly inhere in, or belong to, the elementary states or simple processes themselves, out of which the higher forms are derived.

11. The chief advantage of Parallelism as a hypothesis is undoubtedly the same as that of the 'Twofold Truth' of an earlier philosophy; it enables its adherents to side with the materialists from one point of view, with the spiritualists from another. Both systems, it is held, may be true; each at least may present one aspect of the 'ultimate' or 'absolute' truth. On the one hand, all actions—the evolution, the growth, the adaptations of organisms to their environment—are determined by a blind mechanism, each phase succeeding each by a necessity which is absolute; that is to say, from each situation there is one and only one development possible, and that is the development which actually occurs. An action—a form of behaviour—is explained only in terms of physiological, that is, ultimately, physical and chemical processes. Design, selection, choice, feeling, desire, emotion play no part in the world's activity—*from this point of view*. On the other hand, seen from the inner side, this necessity becomes freedom and spontaneity; the mechanism of the atoms, the movement of the molecules, become desire and judgment, feeling and will: the organism is a personality, and determines its own ends, its own life. To the Cæsar of science are rendered the things which are Cæsar's—the conservation of energy, the reduction of the whole life of the universe to chemical, electrical, and mechanical processes; and to God the things that are God's—the spiritual life with its struggles and falls, its ideals and its redemptions. The question is not, however, whether there is any advantage in this theory; there certainly would be, if it were true: but is it even thinkable? Are we not using bare terms, without any meaning behind them, when we speak of the *same* reality as being at once determined from without, and self-determining? A man has an alternative of going abroad for a holiday or remaining at home for his work; he 'decides' for the latter. Now it has a perfectly clear meaning if we say that the man's 'choice' and action are really determined by his structure, as it has come to be through physical heredity and environment. It has also a perfectly good meaning to say that his choice is free, is an expression of his mental character, of the ideals by which he is attracted; but it has no meaning whatever to say that it is *both* determined *and* free. Whichever form of parallelism is adopted, a given bodily action has its mental correlate, which is either the same *in reality* as the bodily action, or is at least its necessary correspondent. Whatever laws govern the existence of the one must also govern the existence of the other: if a physical process c is a necessary sequent of a and b, then its corresponding mental process C must also be a necessary sequent, not merely of mental A and B, but *also* of the physical series a b.

The use of the term 'appearances' or 'aspects' is misleading. Aspects or appearances presuppose an observer; who is the observer in the case of body and mind? He must be some being who is neither mind nor body; yet, as a knowing being, he must be mind. Thus we come back to our starting-point: mind has priority over body; body is the appearance of mind. This, however, is *not* parallelism.

12. The alternative is *interaction*—the assumption that body acts upon mind, and mind upon body. Unfortunately, such a theory is subject to objections of great force from the points of view both of the physicist and of the spiritualist.

(1) If action of any kind takes place from the mental upon the physical world, or *vice versa*, then the principle of conservation of energy cannot be maintained. No means exists by which the amount of energy lost by the brain in effecting a sensation, or added to the brain in a volition, may be measured. *Some* energy must presumably be lost, however, when a physical process is the condition of a mental impression: there cannot remain the same quantity in the body, since, in fact, the action of the body is found to be different, according as there has or has not intervened a conscious process. Again, the same stimulus does or does not give rise to consciousness, according to its intensity, *i.e.* according to the force with which it acts upon the nerve-centres; in the case of subliminal stimuli we can only assume that the energy expended is not sufficient to effect the change in consciousness. The principle of conservation has two sides (cf. Wundt, *System der Philos.*[2] p. 483)—(a) that the total amount of energy in the physical universe remains always the same, and (b) that, when work is done by any *physical* system, the amount of energy lost must be fully compensated for (however different the form it takes—heat, electricity, light, motion, etc.) by the gain of the other physical systems affected by the work. The second part of the principle may be accepted apart from the first; it has, however, no bearing on the relation between mind and body. The first part is more purely hypothetical, and need not be admitted by psychology, if inconsistent with the facts of that science. It has been suggested (a) that the mind may alter or affect only the *direction* of energy or of its transformation, not its amount (von Hartmann, etc.). But in matters of energy and force the two things, quantity and direction, cannot be separated from each other. Again, (β) the balance may always be maintained between the amount taken away and the amount added in the various operations between mind and body. This, however, is again a recourse to miracle, or to some

mystical pre-established harmony. The only defence possible is to admit the charge, but to deny that the action complained of is a crime. The principle of conservation is a hypothesis formed to explain certain phenomena of the inorganic world, verified as far as experience has gone (although now being called in question) for these only; not verified at all for organic processes, such as growth and reproduction, still less for those physical actions which we ascribe to mental influence. It has also been suggested (by Stumpf, for example, and from another standpoint by Fechner) that we may regard mental activity as itself a form of *energy*; that the physical energy expended in the central nervous system is transformed into an equal quantity of mental energy, and *vice versa*. What we call mental energy certainly increases with physical health, and especially with the health of the brain; it decreases with the degeneration or decay of the brain. It is questionable, however, whether the term 'energy' in the two cases is really being used in the same sense, as it must if there is to be equivalence between the two kinds.*

(2) It may be said that the action of body upon mind is inconceivable; that the only forms of action given to us in experience are either (*a*) of body upon body, or (*b*) of the mind upon itself. The first we have from external, the second from internal perception. Berkeley and Hume, however, long ago disposed of the view that we ever directly experience the action of body upon body; and Hume also questioned the assumption that we are conscious of, or have any direct knowledge of our own mental activity. Causality may be a presupposition of experience; it is certainly not given *in* experience. On the other hand, the 'uniform succession' which we regard as the cue for the application of this category is found far more frequently between mental and bodily processes than between mental and mental, or between bodily and bodily. If causation is a mystery, it is as mysterious in the action of two bodies upon each other as in the action of the mind upon the body; if it is a 'fundamental principle' of thought, it may be applied in the latter case with more assurance than in the former.

(3) But how, it may be said, is mind to set about its action upon body. A 'voluntary' movement starts, let us say, in certain brain cells, and proceeds outwards to the muscles. How does the mind, an immaterial substance or subject, set this process going? Somewhere the push must be given, or the spark applied. How is it done? Here the difficulty of the disparity of mind and body presents itself with great, and for many, it appears, with overwhelming force. It is not, however, in principle any more curious or incomprehensible than that body should 'correspond' to mind, whatever may be taken as the meaning of that mysterious word; not more so than that one reality should appear as two totally disparate entities, as Monism assumes. Somewhere or other we must arrive at an unexplained and, perhaps, inexplicable fact of experience; and for interaction, this local action of mind upon body, with the converse qualitative action of body upon mind (as when a given, definitely localized, nerve process gives rise to a sensation of red, while another, differently localized, gives rise to a sensation of cold or of bitter), marks that point.

Body may 'ultimately' prove to be mind, and yet the relation between a finite body and 'its' mind be one of interaction. A system of this nature is contained in Professor Busse's critical and thorough study of the subject. We have seen that our own and all other bodies are given to us, and are known by us, only as contents of consciousness, as actual or possible sensation, perception or thought, while various social experiences forbid us to regard them as 'merely' our *individual* or *subjective* impressions. We may conclude, then, that our own body and other bodies, which we only gradually learn to distinguish from our own, are appearances to us of mental or spiritual realities—realities distinct from and independent of ourselves, yet akin to us; that these realities differ widely from each other, and from us, in the degree of mental development at which they have arrived, and of which they are capable; that they affect or influence us only through that entity or system of entities which appears to us as 'our' body, and that they in turn are influenced by us only through the same intermediary. Thus our body is not the 'manifestation' or 'outer aspect' of our mind, but is relatively independent of it, being the 'manifestation' of another, or other minds. On the other hand, our mind's development is bound up with that of the body, which is so intimately connected with it. What we may regard as in a special sense the growing-point of the body throughout life, namely, the brain, has its structure, its organization, in large part determined by the actions of our mind, by which it becomes a more and more perfect instrument for the realization of our desires and our ideals, whether high or low. It may be held also that the gradual failure of powers with old age or the temporary failure with illness or fatigue—failure which, though primarily physical, seems to reach to the very core of the mind's being—is defect not of the player, but of the instrument on which he plays, and through which alone his genius can find fitting expression. See BRAIN AND MIND, MIND, SOUL.

J. L. M'INTYRE.

BOEHME.—I. *LIFE.*—Jacob Boehme (sometimes spelt Behmen), called the 'Teutonic Theosopher,' was born in November 1575, in the village of Old Seidenburg, near Görlitz, in Upper Lusatia, which in his time seems to have belonged to Bohemia, though in 1635 it was transferred to Saxony, the Elector of which was Boehme's protector during the later part of his life. The parents of Boehme

* On the whole question of the validity of the principle of Conservation of Energy, and of its bearing on the problem of Mental Causality, see Ward's *Naturalism and Agnosticism*, especially Lect. vi.

were poor pious folk, who trained up their son in their own (the Lutheran) faith and in a knowledge of the Scriptures. The only education he got was of the most elementary character. At an early age he was put to tend cattle, with other children of the village, and, while thus employed, had his first remarkable experience. Having climbed (says Martensen) to the top of a mountain called the 'Land's Crown,' he saw 'a vaulted entrance composed of four red stones, and leading into a cavern. When he had toiled through the brushwood that surrounded the entrance, he beheld in the depths of the cave a vessel filled with money. He was seized with an inward panic, as at something diabolical, and ran away from the spot in alarm. Subsequently he often returned to the spot, accompanied by other boys. But entrance and cavern had vanished.'

After this, he was apprenticed to a shoemaker in Görlitz, and had another strange experience. While he was in charge of the shop during his master's absence, a stranger entered and priced a pair of boots. The lad, thinking he had no authority to sell, tried to get out of the difficulty by naming a prohibitive price; but the stranger paid it, and, after having gone out into the street, turned and called in a loud voice, 'Jacob, come forth!' Surprised that his name should be known, Jacob went out to him; when the stranger, fixing on him a penetrative gaze, said, 'Jacob, thou art yet little, but thou shalt become great, and the world shall wonder at thee. Therefore be pious and fear God, and especially read diligently the Holy Scriptures; for thou must endure much misery and poverty and persecution; but God loves and is gracious unto thee.' After this Jacob became still more serious and devout. Unable to endure the ribald and profane language of his mates in the shop, he felt obliged to reprove them, whereupon his master turned him out, saying he would have no 'house-preacher' to stir up strife. Jacob now entered upon his *Wanderjahr*. In the course of his travels he discovered into how many warring sects the Protestant party was split up, and how fierce and uncharitable were their contentions. They seemed to him as Babel, and he has much to say about this Babel in his writings.

At the end of his wanderings, he returned to Görlitz, and in 1599 married the daughter of a tradesman, with whom he lived happily for twenty years, and by whom he had four children. Now further visions came. When he was sitting one day in his room, his eye caught the reflexion of the sun's rays in a bright pewter dish. This threw him into an inward ecstasy, and it seemed to him that he beheld the inward properties of all things in nature opened to him. It was one of his ideas that the quality of everything is expressed by its shape, colour, scent (which he calls its 'signature') to such as have eyes to see. Ten years later, he had another 'opening' which went much further, and showed him the inwardness of all manifestation, how it arose, and its meaning and end. He felt an inward impulse to write down what had thus been revealed, not for publication—for he felt himself too simple to teach others—but (as he says) for a memorial to himself, so that, should the power of interior vision fail, he might have a record of what he had seen, and thus hold it permanently. The book he now wrote was the *Aurora, or Morning Redness*, and was the cause of the commencement of that persecution which for so many years embittered his life. The work was, of course, in manuscript. The written copy chanced to be seen by a nobleman, Carl von Endern, who had called on him. Being greatly pleased with it, the nobleman begged permission to borrow it for a short time, and then, without Boehme's consent, had some copies of it made. One of these happened to fall into the hands of the Pastor Primarius of Görlitz, Gregorius Richter, a violent man and inflated with the dignity of his office. He attacked Boehme in a sermon on 'False Prophets.' Boehme, who was in church, went to him afterwards and most meekly begged to know in what he was wrong. But Richter would not hear a word, and the next day went to the Town Council and demanded Boehme's expulsion, threatening them with the vengeance of God if they refused. A decree of banishment was passed, and no time was allowed him to wind up his affairs and make arrangements. Boehme meekly submitted, saying, 'Yes, dear Sirs, since it cannot be otherwise, it shall be done.' There is some difference of statement as to what happened after this. Martensen says that the next morning the Council sent to recall him, and told him he might continue to live in Görlitz if he would give up writing books and stick to his trade. This he undertook to do, and for five years abstained from writing, though much troubled in conscience as to whether he ought not to obey God rather than man. At the end of this time, conscience and the entreaties of friends triumphed, and he again began to write, and was then finally banished. Others say that the Council offered to revoke the sentence of banishment, but implored him—for the sake of the peace of the town—to remove away of his own accord, and that he did this.

It is certain that, when banished finally, he went, on a citation for heresy, to Dresden. Here the Elector appointed six learned doctors to examine him and report as to whether he ought to be protected or punished. His answers seem to have produced a striking effect on these men. One is reported to have said, 'I would not take the whole world, and condemn this man.' Another replied, 'How can we judge what we have not understood?' He seems to have returned to Görlitz, after this examination, under the protection of the Elector, against which even the rancour of Richter could do nothing. His fame as a man of interior wisdom drew to him many learned men and noblemen.

At the house of one of his noble friends, in Silesia, he fell into a fever which developed into gastric disease. He felt a premonition of his end, and asked to be carried back to Görlitz. Here he was attended by his old friend, Dr. Kober. After an illness of a fortnight he asked for the last Sacrament. Richter was dead, but the new minister held similar opinions, and refused to administer it unless Boehme would subscribe the Lutheran Confession of Faith. This he immediately did, and the Sacrament was administered. On the night of Sunday, Nov. 21st, 1624, he called his son, Tobias, and asked him whether he heard the sweet music. Tobias said he did not, and his father bade him open the door, when he must surely hear it. He asked the hour, and, being told it was after two o'clock, he said, 'My time is not yet: three hours hence is my time.' At six in the morning he bade them all farewell; and saying, 'Now I go hence to Paradise,' he quietly departed.

II. *BOEHME'S SYSTEM*.—1. **His doctrine of origins.** — Boehme's system goes back to the beginning, to the time when the Divine Being first proceeded to manifestation. To attempt to go behind this, he says (*Three Principles*, xiv. 84), confuses the mind. He also says (*ib.* v. 19) that the origin of things ought not to be inquired into at all: yet since sin has now arisen, and we find ourselves fallen from the glory of God, we *must* know how sin arose, or we cannot know the remedy for it. And we cannot know how sin arose without opening the mystery of the process to manifestation, and the arising of the second, or contrary,

Will, and the seven Forms of Nature, and how the two eternal Principles—darkness and wrath of the first, and light and love of the second—arose, and this present world of the third Principle which stands between the two, and is qualified in good and evil. The ability to open this mystery is ours only when we are led by the guidance of the Holy Spirit; but as we are (in our deepest spirit) out of the Divine, we are able (in this spirit) to penetrate so far; for every spirit can see back into 'its own Mother,' but no further (*ib.* ii. 1).

Of the state before manifestation, all we can say is the following. The Supreme Spirit (whom we call 'God') was in a state which Boehme calls the 'Still Rest.' In Him was active one only Will, which, being one, did nothing but only BE, in one state and without any happening. All that afterwards came into manifestation through the process about to be described was in Him in a state inchoate and purely subjective. There was yet no creature to know Him and rejoice in the knowledge, and find the highest delight in the recognition of His Power and Goodness. All was yet pure potentiality; all were in Him as undifferentiated elements in the content of His Being, and knew not themselves or each other. In short, all was Essence in the simple Being of the Deity as a One Will, and there was no *existence*.

It is clear that such a statement as the above is derived as an impression from abstract considerations (arising in the nature of the case) as they must appear to our highest metaphysical perception. Boehme does not claim that such a presentation is a full and complete account of so stupendous and mysterious a matter, but only that it is the best we can yet see. To him it was probably presented in mystic vision; but we, lacking this, can only follow him with our best thought. It cannot really be as described, for we are obliged to think and speak in terms of time and space: and in God these are not. Boehme saw this fact clearly, and often warns us that, though he is compelled to speak in these terms, we must remember that the transcendent Fact is otherwise. If we think at all, we must think in these terms; and there is no harm in so doing so long as we bear in mind that the transcendent Fact is only feebly apprehended, and never in any way comprehended, by our thought. Therefore, while we have to speak of a time before manifestation, we must remember that this is only by a logical necessity, arising from our present limitation, and not a full presentment of the Fact.

When manifestation was to take place, the first necessity, says Boehme, was that a second and contrary Will should arise. This Will is not a new thing in God, for, as to His content, He changes not. It is again a logical necessity, because out of a one Will no 'manifoldness' can come, no conflict or strife or dramatic interest. So we must say that a second Will arose, and the immediate result of its arising was a darkening of the primal and, till now, universal light. Even light cannot be known consciously as such if there is nowhere any darkness. And as we know and appreciate only through experience of a contrary, and God has made us thus, the presumption may very well be that there is something in Him which answers (though in a far-off and exalted way) to this law of our minds to which we know no exception.

Immediately upon the darkening there arose the first Form of Nature, which Boehme calls *Harshness.** This is the principle of hardness, close holding of itself to itself, and resistance to modification—a strongly conservative principle. The second Will must produce the contrary of the first—darkness, overshadowing, drawing together, hardening. Spiritually it is the power of self-centredness, self-satisfaction; of that inertia which resists conviction of sin, submission to the will of God, and love of the brethren.

Immediately on the arising of this Form, the first Will, disliking the darkness, seeks to turn back again to the light. But this it cannot do without reversing the Will to manifestation, which is impossible. Thereupon arises the second Form of Nature, *Attraction*. It is the reverse of the first. It seeks change and new combinations, and will let nothing alone—the principle of dissatisfaction and unrest. Spiritually, it is that which forces us into ceaseless activity, whereby we enter into experiences, and so (in the end) work out our *reductio ad absurdum*.

Out of the conflict of the first two Forms arises the third, *Bitterness*. It may be easier to catch the ideas of these first three Forms if we call them (in modern terminology) *Homogeneity*, *Heterogeneity*, and *Strain*. The Strain, or tension, arises from the contrariety and opposition of the first two. It is the bitterness of dissatisfaction which, as to the darkness, expresses itself in discontent and complaining, but, as to the light, becomes discontent with our own sin, sorrow for it, and tears of penitence.

Out of the Strain, as it increases in intensity, there arises the fourth Form, *Fire*. At this point, the operation being carried on reaches the degree at which a self-consciousness arises, with a sense of own will and choice. At this point also the evolution divides into two contrary directions, and it is within the power of the consciousness to decide which of the two it will take. The Fire at first is a cold, dark fire which can burn and hurt, but cannot purify—like an iron heated to just below redness. As it burns and the Strain increases, it grows in heat till it reaches redness, which is a light of low illuminating power, and shows things very dimly. Such is the light of the external man, and the light is the quality of the self-consciousness, which in this case is full of greed, wrath, and pride.

But if the evolution goes on in the right way, then the dull glow of the Fire grows stronger and stronger, until it passes into the fifth Form, *Light*. This is the true Divine Light, and 'makes manifest' things as they really are. When this Light arises, the Fire sinks down from its horrible raging, and becomes only a meek and pleasant warmth, giving all its power to the Light. Thereupon the first three Forms also change their character and become gentle and soft and harmonious. It is as though in the Light they first *see* their true function and purpose in the great work, and are content to fulfil it, and cease to express themselves as they are in themselves (in own self-will) without regard to the end they are there to produce. It is the change which (in modern terms) would be called the passing from self-consciousness to cosmic consciousness; when, instead of thinking of the universe as made for our self, we think of our self as made for the universe. Thus we rise to a higher grade of being and a truer joy than the self-fulfilment of our own small wishes and loves could ever give us.

The sixth Form of Nature Boehme calls *Sound*. The quality—first fixed towards good by the arising of the Light—now begins to express itself to perception. The manifold ways in which this expression is effected — by speech, cries, colours, scents, tastes, feeling, lightness, heaviness, and so on—are what he means by Sound.

The seventh and last Form of Nature he calls *Figure*. Here the whole 'thing,' thus having attained its being in Essence, now puts on a shape, a body, fit to be its full and perfect expression, and a mansion of the six Forms. Hence as the evolution has gone on in rightful order, arise all forms of beauty, all fair colours and sweet

* One of the difficulties in following Boehme arises from the fact that, in different passages, he calls these Forms of Nature by different names, according to different points of view. Thus he sometimes calls the first a *hard attracting*, though he calls the second *attraction*. He means that the first attracts so hard itself to itself that it attracts nothing else, while the second seeks to attract other things to itself, but does not attract itself to itself. The essential idea of the Forms will soon become clear upon patient study.

scents and pleasing sounds; and the creature stands marked with the 'signature' of God, a being to His honour and glory and its own indescribable delight.

But should the evolution proceed from the fourth Form in the false direction, that is, should the will elect to stand in self-will, and prefer might, power, anger, to meekness, humility, and love, then its light is but the dull, red glow of the fire; its sound is discordant and harsh, and its figure repulsive and monstrous. For the first three Forms are the real *bases* of Becoming, and originate the Essence which becomes substantial in the sixth, and embodied in the seventh. If these first three are not modified by the arising of the divine Light in the fifth, they must remain expressed in their own self-quality of fierce rage and fury, and the creature of which they form the basis will be of like nature and signature. It is in the fourth Form that the great choice has to be made whether the Fire shall be the fire of 'self,' which consumes, or the fire of 'love,' which illuminates.

It is absolutely necessary, says Boehme, that the first three Forms shall be there; without their presence no creature can come to being. They are the power to 'being' in every mineral, plant, and animal. But they should never be allowed so to be known or manifested as that their essential 'own self quality' should have any influence in determining the quality manifested. We know that Love is strong, the very strongest of all things; but in Love this strength is never on the surface. As soon as Love strives to 'force,' it ceases to be Love; when it keeps the strength in a hiddenness, and shows as its seen quality only meekness and gentleness, then the unseen base makes the meekness and gentleness strong. But should the creature despise the meekness, and resolve to compel and force others to love it, then the force, being shown, can no longer act as a base, and the supposed force becomes the weakest of all things, because devoid of its basal strength.

Nevertheless, it is in the power of all creatures, from human upwards, to open the first three Forms, and make this quality their quality. This Lucifer did. He was created a Throne-Angel, but allowed the might of the Fire to become dominant in him, and despised the meekness and self-surrender of the light of love. Hereupon his light went out, not, as afterwards happened to Adam, into a hiddenness, but into absolute extinction. The meek love of God, which alone could re-kindle it, *that* he has despised, and now stands in eternal rejection from the Light, shut up to the Fire he has chosen, and in which alone he is capable of finding joy. He is now God manifested as to the first Principle, as Jesus Christ is God manifested as to the second; for Christ is the true Light, and the Devil is the apparent Darkness. Each abides eternally in his own Principle.

Of these Principles, it is now time to speak. There are three: two eternal, and the third temporal. The first Principle is the dark world of the Anger, in which the first three Forms stand open and operative in giving quality, and the last three are hidden. The second Principle is the light world in the Love, where the first three Forms are not allowed to give quality, but remain practically hidden, while the last three alone qualify. Between these two stands the third Principle, this Present World—which had a beginning and will have an end. The first Principle is all evil; the second is all good; the third stands in good and evil. While man is in it, both the two eternal Principles seek to press into him; the dark world strives to draw him down into it, and the light world strives to lift him up into it. He stands between the two, and to whichever of them he here inclines his imagination, to that he will hereafter belong (Boehme says eternally). For there is no open way from the first Principle to the second save through the third, which stands open to both; and when this temporary world of the third Principle has passed away, no passage will remain, and the two will be so absolutely shut off from each other that each will seem *all that is* to itself, and be unconscious of any other.

2. **Doctrine of Sin and of the Fall.**—Sin, in Boehme's system, is really a false imagination. But, as our imagination defines the real for us, the concept is much stronger than it might sound. If the false imagination lasts eternally, we are eternally in Hell. If a true imagination lasts eternally, we are eternally in Heaven. For nothing short of the power of God, co-operating with the consenting will of man, can enable man to alter his imagination; that is, his consciousness of his state and surroundings, of what is real and of what is not.

The problem of the origin of Evil has long perplexed students of Divine wisdom. Boehme seems scarcely to be conscious of those aspects of the problem which press upon many hearts and minds at the present day. He simply throws the whole blame and responsibility on the perverted will of a creature (Lucifer), and this only removes the difficulty one step further back. Nevertheless, his system contains a remarkable suggestion of a solution.

He is careful to assure us that God (as He truly is, as He appears to an imagination formed in, and by, the Light) is never angry and never punishes. Seen by such an imagination, what looks to its opposite like punishment appears as loving warning and guidance. But the false imagination cannot but think of God as like itself; therefore it takes God's mercy for His wrath, and His guidance for revenge. All the six Forms of Nature have come out from God, and so the first three (which, when manifested, appear as wrath, anger, jealousy) are in Him, only in Him they are *never* manifested. Boehme commonly needs careful interpreting. He calls the first Principle the Principle of the Father, and the second that of the Son. But he adds that in reality the Father is never apart from the Son. We see, therefore, that what he really means is that, *if* the Father should (by a false imagination) be thought of as existing alone, and apart from the Son, He must (by such an imagination) be known as wrathful, angry, jealous. And, as such an imagination exists, He must speak to it in the terms of its own apprehension. But in Himself, as known by a true (because Divinely illuminated) imagination, He is all Love and Goodness.

Sin arises when the first three Forms are brought out of the hiddenness, not merely to look at (as will be explained further on), but to be tasted and *known*, and their own self-quality accepted as our quality. But as to the transcendent reality, they *are never thus brought out*. The transcendent reality is known to man only through his imagination. When illuminated by the Light, his imagination rightly pictures to him the reality; but when not so illuminated, the reality is wrongly pictured, and what he imagines to be the fact is the reverse of the fact. Therefore sin is possible only if a false imagination be possible; and can take on an appearance of reality only in such a false imagination. Thus at once sin is, and is not. When it is said, 'God cannot look upon sin,' the expression is more profoundly true than we suspect. He sees it, not as a positive thing Himself has made, but as the imagination of the thought of the heart of a creature who is unaware that the light in him is darkness. The fact is not

as the false imagination pictures it, and the thing pictured exists nowhere save in the false imagination. That gives it reality to the man whose imagination it is, but cannot make it actually real.

But however unreal the *content* of the false imagination may be, the false imagination itself is real. It was real to Boehme because he believed that, if not rectified in this life, it would eternally abide; for there is no better test of the real than the fact that it abides. If we might eliminate this idea of its eternity, the problem would be solved, for sin would then be but as a passing madness, and Hell and Earth but an episode in the eternity of Heaven.

Boehme lays down this clear principle (*Myst. Mag.* I. vi. 12), 'that the fullness of joy might know itself, the keen tartness of the Source [that is, of the first three Forms] must be a cause to the Joy; and the darkness, a manifestation of the Light; that so the Light might be manifestly known, which could not be in the One.' But how can this be, if the first three Forms are never to be explored? Here again Boehme offers us a key.

'The outward spirit and body was unto the inward as a *Wonder* of Divine manifestation, according to the Fire-dark and Light world, a mirror of the great Omnipotence and Omniscience of God, and the inward was given to it for a ruler and guide. As God plays with the time of this outward world, so likewise the inward, Divine man should play with the outward in the manifested wonders of God in this world, and open the Divine wisdom in all creatures, each according to his property; so likewise in the earth, in stones and metals, in which also there is a twofold Essence, viz. one from the original of the Fire-dark world, and one of the original of the holy Light world. All this was given him for his play' (*Myst. Mag.* I. xvi. 9–11).

Through the clumsy (and, to some, repellent) wording,* it is not hard to catch the suggestion here contained. The first three Forms are the sole causes of variety in the manifestations. As the first or second or third predominates—which is possible in an infinitely varying series of grades or degrees—so the variation arises. Thus out of these Forms arise the *wonders*. These may be looked into—by a will so set in the Will of God that it is in no danger of wanting to do more than look, never to taste or *know*—with perfect safety and propriety. We should *play* with them, as little children play at 'shop,' without ever dreaming of making it the serious business of the whole life. They play for the time, and then let it go, and so shut it up again. The harm is where the will is so unstable that from looking it passes to longing after, and from this to tasting and proving; so that the might of the Fire-world gains a hold, and moves the being to put his whole imagination into this 'play,' whereby from play it passes to earnest, and surrounds the whole life, and becomes its one desire. Then the true imagination becomes as dead, the spiritual perception closes, and the being lives henceforth in the world of its false imagination, and knows no other.

The consequence of sin, in Boehme's teaching, is a disturbance of the relations of the parts to the All. Man should be to the lower creatures what God should be to him. Over him God should have sole dominion, and over them he should have sole dominion. Thus, through all the infinite multiplicity of the external expressions of the Divine properties, one Will should be dominant—the will of man in whom God's Will is dominant. Thus God would be (virtually) *All in All*. All the creation would then be in true harmony and temperature, each would love and serve the rest, and no antagonistic will would arise to introduce strife and discord. The elements whence strife arises, and the strife itself, might be known as a *speculation* (in the old sense of 'looking into'), but never as an actualization. Such was the first world of the Temperature, before Lucifer's and Adam's fall.

The outer process whereby the Fall was effected was, as the first and initiatory step, the sin of Lucifer, who was pleased with the might of the Fire in the fourth Form, and rejected the meekness of the submission in the Divine Light, which would otherwise have qualified the might. Secondly and directly, it was the act of our first parents in eating of the forbidden fruit.

Only a hasty, general sketch of Boehme's teaching as to this can be given here. Adam was created out of the two Principles—he had an external out of the Ens of the Fire-source, and an internal from the Ens of the Light-source. The former is the masculine element, the latter the feminine. The two sex-elements were united in one form, which was that of a masculine Virgin. The Fall had a preparation and a culmination. The preparation was that the bi-une being, Adam, felt 'alone.' He should have 'propagated magically' through the union of the two elements in himself, for he was a two-in-one (*i.e.* both 'him' and 'them,' as he is called in Gn 1[27]). He would thus have 'multiplied' and found companionship. But this he proved unable to do. The true 'help meet for him' was *in* him, but he looked around instead of within. Therefore the woman-element must be externalised that he might become conscious of it. But this could not be done in the true, Divine imagination which was in full rapport with the transcendent Fact. He is therefore caused to fall into a 'deep sleep,' and in this lower grade of imagination finds the internal externalised. They are still in Paradise, but now in danger; and are warned of it. They are not to inquire into the nature of good and evil; for now, their imagination being in a degree false, they are likely to wish to do more than *speculate*; they may want to *know*. God alone may *know* good and evil (see Gn 3[22]). Thus the Tree of Life to the bi-une Adam becomes the Tree of Temptation to the divided Adam and Eve. The danger now was that they should desire after a *good* which they could understand from and in themselves and not from and in God, a *pleasure* which in this same way they could feel to be such, and a *wisdom* which would make them not submissive to the One Will but possessed of a will of their own, and an imagination arising from the sight of their own eyes. This false imagination instantly became operative, but not as they had hoped. The Divine perception went into a hiddenness and virtually died in them; and as they had known themselves only in this imagination, *they* virtually died and arose to *newness* of life, but as the change was downwards, it would be newness of *death* rather than of life. The body of the heavenly One Pure Element disappeared (if, indeed, it had not done so before in the falling into a deep sleep), and they have now a body of four elemental, corruptible matters, made (as science tells us) 'bone for bone, muscle for muscle, and nerve for nerve' like the beasts that perish. Instantly also the result reacts through nature. The Divine element, which before had budded through the earth and produced fruits wholly good, now withdraws into the hiddenness, and the earth bears 'thorns and thistles,' and only such grains and fruits as contain—with the good of nutriment for the animal body—the evil which through digestion and excretion has to be separated and cast out, the like of which could never be in heaven where no corruption can enter. Disease and sickness manifest themselves, poison manifests itself in certain plants, and a fierce and savage nature in some of the animals. Thus the Fall of man infected the whole 'dominion' he should have ruled as God's vicegerent; so that now 'the whole creation groaneth and travaileth in pain together,' in an own self-will which manifests *as it* will, and not in submission to the will of God.

3. Doctrine of Regeneration.—St. Paul declares that the creation was thus subjected to 'vanity' in hope that it should 'be delivered from the bondage of corruption into the liberty of the glory of the children of God' (Ro 8[21]). Lucifer's fall was beyond remedy, says Boehme; Adam's was not. Lucifer imagined into the first Principle (which is eternal); Adam only into the third. He desired to know good and evil; Lucifer had said, 'Evil, be thou my good.' Thus Adam introduced into his mind a false knowledge which yet did not entirely obliterate, but only obscured, the true, so that he yet can know evil as evil; while Lucifer knows evil as good. Therefore Adam died, not to the entire ability to know good, but only to the true, Divine perception which knows *only* good. But though he died to this, it did not die to him: it went into a hiddenness, but is still there as a latent potentiality in him, though at first he is so completely unaware of it that it is as if it were not in him at all. His state is rather a logical than an absolute death; it is practically absolute as far as his consciousness goes, but his consciousness does not embrace the whole content of reality.

* Boehme was an uneducated man, and often bemoans the fact, saying that he could have expressed himself better had he been better educated.

His natural life is a life in death, and if the dead life is to come to real life, it can only be through that whereby we come to this life—a birth; therefore (as our Lord said to Nicodemus) 'ye *must* be born anew' (δεῖ ὑμᾶς γεννηθῆναι ἄνωθεν).

The power to this New Birth is the power of God through the life and death of Christ who came down into our false imagination (but not into its dominance) to 're-tincture' the disappeared Divine nature that stood as dead, that it might again spring forth to newness of life. He brought the true imagination into the false, and showed it to us visibly in His life and character; whereby we may catch the idea that ours is not the true, and so come to desire the true. Then He leads us in the one way to the recovery of the true, by leading us to the Cross, whereon we must (in and with Him) crucify the false which lies over and obscures the true; then the true arises necessarily and becomes our new imagination, that is, our new 'self' and life.

The promise given to our first parents of the Treader on the Serpent, though not immediately fulfilled—not, indeed, till many centuries afterwards—availed to preserve the Divine nature in man from doing more than disappear, from actually abandoning him. It remained hidden and uncognized, but it was there; till the fullness of time, when Christ was born of a pure Virgin. The necessity for the Virgin-birth lies in this, that the male seed is from the Fire-source, and the female from the Light-source; so the special nature of the Fire—a hard-set selfhood—is less present in the female than in the male (*Myst. Mag.* I. xxiii. 43). Thus our Lord was born, not of 'bloods' (*i.e.* a divided parentage) nor of the will of the flesh, nor of the will of man, but of God; that is, of the heavenly Water and of the Spirit; and thus must we again be 'born anew.' All through His life He re-acted the part of Adam, only He stood where Adam fell. He stood in the forty days' fast, and refused to eat of the earthly substantiality (though it looked 'good for food'); refused to long after earthly adulation and worship (though it seemed 'pleasant to the eyes'); refused to act from the outer wisdom of the serpent (though it would have given Him the external dominion and glory of this world).

Thus He gained the power required. But, to avail ourselves of His salvation, we must enter into His death by utterly refusing the threefold temptations of the world, the flesh, and the Devil; that is, the lust of the flesh, the lust of the eyes, and the pride of life. Through His power we can now put the self-will again into the hiddenness, and so bring out of the hiddenness, and live in, the meekness in which He ever lived. Thus we regain what Adam lost—the high glory of being so one with God that He dwells in us as our will, and what He wills seems to be what we will. When this central Will is inoperative, myriads of conflicting wills arise, for men and all creatures do then 'what is right in their own eyes,' and all peace and harmony is destroyed. The world is plunged in conflict, everything is 'out of joint'; and all this for the sake of a false idea of *freedom*, the glamour of which seduces us, but which proves a more horrible bondage than 'His service,' which alone is 'perfect freedom.'

A powerful aid to the regeneration is found in 'Christ's Testaments,' Baptism and Holy Communion. In each it is not the outward element that profits, but the inward. If the new life has arisen in the soul, then it perceives the inward in the outward element, and it is the inward water which cleanses, and the inward sustenance which feeds, the inward man. In all earthly matter of the four elements the inward One Pure Element lies hidden from the outer man, but open to the inward, first through faith, afterwards actually.

Many other points in Boehme's system might be noticed, but enough has been said to give an idea of the general trend of his theosophy. His terminology constitutes the greatest difficulty in understanding him. Many of his learned friends were students of Alchemy, and one of them induced him to read the works of Paracelsus. He thus became acquainted with the terms of Alchemy, and uses them constantly, to the perplexity of his readers. For he saw in them a meaning beyond the outward, and no one will catch his real purport who cannot detect the spiritnal allusion underlying the terms used. To him the *Magnum Opus* seemed a magnificent symbol of the 'maximum opus' of regeneration. The transmutation of the base metal into the perfect stands for the transmutation of the fallen, external nature into the unfallen internal in which man was originally created in the image and likeness of God. And the process through solution, purification, and re-fixation marvellously exemplifies the spiritual process, through putting the false imagination to death, purification through the Spirit, and the re-creation of the 'new man.'

III. *Boehme's importance and influence.*—The philosophical value of Boehme lies in his suggestion that in all 'things' as cognized by human apprehension there must exist a hidden and a manifested element. If both are explored, they can appear only as absolute contraries, evil and good. Yet what is required is not to annihilate one that the other may exist alone, but to unite the strength (without the quality) of the evil (which, without its quality, is not evil but strength) to the quality of the good, making the former the unseen, unmanifested, basal power of the latter. For, while evil is manifested as such, good lacks the basal might which would make it irresistible (as the very presence of the evil proves). What is wanted, therefore, is not the destruction of one of the two terms, but such a change of relation between the two as shall virtually reduce them to one. This is the Hegelian triad of Thesis, Antithesis, and Synthesis; and absolutely on all fours with this is Professor G. Boole's formula (*Laws of Thought*), 'Universe of thought equals Unity,' most graphically represented by his suggested expression, x + not x = 1.

The religious value of Boehme lies in his clear and unmistakable teaching as to the nature of true regeneration and the true Christian life. Many who will fail to understand his cosmology will find him lucid and most helpful here.

In England, Sir Isaac Newton, William Law, William Blake, and others have been students of Boehme; in France, Louis Claude de Saint-Martin; in Germany, Hegel, Schelling, Schopenhauer, J. G. Gichtel, and many others.

Literature.—The principal edition in English of Boehme's works is a translation in 4 large quarto vols., of dates 1763, 1763, 1772, 1781. The chief works are: *The Aurora, or Morning Redness* (1612), *The Three Principles of the Divine Essence* (1619), *The Threefold Life of Man* (1620), *Answer to Forty Questions concerning the Soul* (1620), *Signatura Rerum* (1621), *Mysterium Magnum* (1623). Of these the last is, perhaps, the most important. There are a number of shorter writings, *e.g.* Apologies and Epistles. Of editions of Boehme's works in the original, the first issued is said to have been by the son of his old opponent Richter, in 8 vols. A more complete edition was published in 1675, and another by J. G. Gichtel, in 10 vols., in 1682. *Jacob Boehmes sämmtliche Werke, herausgegeben von K. W. Schiebler*, 6 vols., was issued at Leipzig in 1831–46, and another edition in 7 vols. in 1840–47. Of importance are also Hamberger's *Die Lehre des deutschen Philosophen Jacob Böhmen* (Munich, 1844); Claassen's *Jakob Böhme, sein Leben und seine theosophische Werke* (3 vols., Stuttgart, 1883–86). A new edition of Boehme's works, ed. C. J. Barker, has begun to appear (London, 1909).

Of modern works on Boehme's system may be noted: F. C. Baur, 'Zur Gesch. der prot. Mystik,' in *Theol. Jahrbb.* 1848–49; Peip, *Jakob Boehme* (Leipzig, 1860); von Harless, *Jakob*

Boehme und die Alchymisten (Berlin, 1870); Martensen, *J. Boehme: Theosophische Studien* (1882); Fuchs, 'Beiträge zu einer richtigen Würdigung J. B.'s,' in *Beweis des Glaubens* (1883); Schönwälder, *Lebensbeschreibung Jakob Böhme*, (Görlitz, 1897); A. J. Penny, *Introd. to the Study of J. B.'s Writings* (New York, 1901); A. Whyte, *Jacob Behmen: An Appreciation* (Edinburgh, 1895); 'Excerpts from Boehme,' with interpretative comments, in the present writer's magazine, *The Seeker*, *passim* (London).

G. W. ALLEN.

BOGOMILS.—The Bogomils were a sect of dualistic heretics whose doctrines clearly declare their kinship with the Paulicians and Euchites or Messalians (*q.v.*). Mainly to the former may be ascribed their peculiar form of Dualism, and to the latter their specifically ascetic element. Both these earlier movements took root in Thrace during the eighth, ninth, and tenth centuries—exotics from their native soil in the Eastern Byzantine provinces (Armenia, Mesopotamia, and N. Syria). They flourished most among the people of Slavic race, particularly the Bulgarians. Here they passed through a process of intermingling and local modification which issued in a system relatively new and strange,[1]—whose adherents increased rapidly though secretly, and are known to have been called Bogomils in the beginning of the 12th cent., if not from the middle of the 10th.

The origin of the name has been usually found in the frequent use by them of the two Slavic words *Bog milui*, 'Lord, have mercy.'[2] A more likely explanation derives it from *Bogumil*, 'Beloved of God,' in which case it may be taken to denote the idea of a pious community analogous to the (later) 'Friends of God' (*q.v.*) in Germany.[3] But not less probable is its derivation from a personal name. Two early Bulgarian MSS have been discovered which are confirmatory of each other in the common point that a 'pope' Bogomile was the first to promulgate the 'heresy' in the vulgar tongue under the Bulgarian Tsar Peter, who ruled from 927 to 968. This would seem to afford a surer clue to the name, and (if correct) puts back the active emergence of the movement to the middle of the 10th century.[4]

Euthymius Zigabenus (died after 1118) is the main source of what is known about the Bogomils. His account is given in titulus, or chapter, xxvii. of the work Πανοπλία Δογματική[5] which he devoted to the refutation of twenty-four different heresies. He was a favourite of the reigning Emperor Alexius Comnenus; and a story told[6] by Anna, daughter of the latter, shows how he came by his information. Alexius, having invited the physician Basilius, chief apostle of the sect, to Constantinople, induced him, under an affectation of sympathetic interest, to make a free statement of his doctrines; meanwhile a stenographer, hidden behind a curtain in the room, took down a verbatim report of the conversation, and at the end of the interview the curtain was raised. In this way

[1] For a good analysis of the elements, traditional and original, which made up the system, see article by Zöckler on 'Die Neu-Manichäer,' in *PRE*[3], and Karl Müller of Giessen's review of Döllinger's *Beiträge zur Sectengeschichte des Mittelalters* in *ThLZ* (1890), No. 14.

[2] This is the Greek interpretation, and is given by Euthymius Zigabenus (titulus xxvii. of his Πανοπλία δογματική).

[3] Zöckler favours this, and says it is thus a 'wohl Spezialbezeichnung der Perfecti der Secte, die sich wohl gern "Freunde Gottes" (θεόφιλοι) nannten.' With this, too, would agree their own self-description as Χριστιανοί, Χριστοπολῖται (Euthymius Zigabenus, *contra Phundagiatas* [in Migne, *PG* cxxxi. col. 48]; Anna Comnena, *Alexias*, lib. xv. [*ib.* vol. cxxxi. col. 1177]).

[4] See 'L'hérésie des Bogomiles en Bosnie et en Bulgarie au moyen âge,' in *Revue des Questions historiques* (1870), essay by Louis Leger, pp. 479–517. Bogomile = Theophilus, and was (thinks M. Leger) the 'pope's' second (assumed), name, his first perhaps being Jeremiah. They were also spoken of as *Fundaitas* (φουνδαῖται), *i.e.* purse-bearers, from *funda*, 'purse' or 'bag,' with reference apparently to a habit of begging their way from place to place like the Friars (see Euthymius Zigabenus, *c. Phundagiatas* (in *PG*, vol. cxxxi. col. 47).

[5] *PG*, vol. cxxx.

[6] Anna Comnena, lib. xv. § 487 (*PG*, vol. cxxxi.).

Basilius found himself ensnared and self-accused. His doctrine thus craftily obtained is set out by Euthymius (*PG*, vol. cxxx.) under 52 heads, of which the main are as follows:—

(1) The Bogomils rejected all the Mosaic books of the OT, but accepted as canonical the Psalms and the Prophets. In addition, they accepted the four Gospels, the Acts of the Apostles, the Epistles, and the Apocalypse,[1] assigning a peculiar sacredness and authority to the Gospel of John. So far as Moses was used, it was as allegory to support their own views. A favourite book was the apocryphal 'Visio *or* Ascensio Isaiae.'

(2) While accepting the Gospel-history, they did so not altogether in its literal sense—Christ's history, *e.g.*, was regarded as a symbolical clothing of higher facts—and they held, moreover, that its meaning had been falsified by the Church. Chrysostom, in particular, seemed to them a falsifier.[2] Nor would they have anything to do with the 'grammarians,' whom they classed as scribes and Pharisees.

(3) They taught a Sabellian conception of the Trinity, saying that all three names—Father, Son, and Holy Spirit—apply to the Father; and that in the end, when Son and Spirit have done their work, they will flow back into the Father. God was represented as human in form, though not corporeal. They pictured the Father as the ancient of days (ὡς γέροντα βαθυγένειον), the Son as an adolescent youth (ὡς ὑπηνήτην ἄνδρα), and the Spirit as a beardless youth (ὡς λειοπρόσωπον νεανίαν).[3]

(4) God's first-born son was Satanael (the Satan of the NT), the highest of the spiritual beings, his Father's universal vicegerent. Tempted by his pride, however, he sought to set up an Empire of his own, and drew after him a great company of the angels. Cast down from heaven on this account, but not yet deprived of creative power, he made a new heaven and a new earth.[4] They held that Satanael also made man, but could not do more than fashion his body. For life or spirit he had to fall back upon God, whose help he besought and obtained on condition that from the human race the places of the fallen angels in heaven should be refilled. So God breathed into man's body the breath of life. But Satanael, moved by envy of man's glorious destiny, repented of his promise. He seduced Eve; and Cain, their offspring, became the principle of evil in humanity. This principle prevailed over the good principle represented by Abel, the child of Adam and Eve.[5] By its aid he imposed himself upon the Jews as the Supreme God. Moses unwittingly acted as his instrument, and the Law—which begat sin—was his fatal gift. Thus all men, save a few,[6] were led astray. Then the good God intervened. In the 5500th year after the creation of the world, a spirit called the Son of God, the Logos, the Archangel Michael, the angel of the Great Council (Is 9[6]), came forth from Him, entered the world in an ethereal body by the channel of Mary,[7] and proceeded to overturn his evil brother's kingdom. Satanael plotted and brought to pass his death—unaware that, being bodily in appearance merely, he could not be affected by any physical pains. When, therefore, Jesus showed himself after the resurrection in his true heavenly form, Satanael

[1] § 1. 'Sapientia enim, inquiunt, aedificavit sibi domum, septemque columnas substituit, *i.e.* (1) Psalterium, (2) sexdecim Prophetae, (3–6) quattuor Evangelia, (7) res ab Apostolis gestae, omnes epistolae, Apocalypsus.'

[2] Eth. Zig. *c. Phundagiatas* (*PG*, vol. cxxxi. col. 53).

[3] §§ 2, 3, 23.

[4] § 7. εἶπε, Γενηθήτω στερέωμα, καὶ ἐγένετο. Γενηθήτω τάδε καὶ τάδε, καὶ γεγόνασιν ἅπαντα.

[5] §§ 6–10.

[6] § 8. 'Eos nimirum, qui in genealogiis Evangelii secundum Matthaeum et secundum Lucam recensentur.'

[7] § 8. 'per aurem Virginis dexteram.'

had to acknowledge defeat. His divine power departed from him. He lost the angelic syllable (*El*) in his name, and became Satan only. Christ then ascended into heaven and took the seat of power once held by Satanael. His own place among men was hereupon taken by the Holy Spirit—produced by the Son as the Son by the Father.[1]

(5) The twelve Apostles were in a spiritual sense the first creation of the Spirit; and the true successors of these, in whom alone He continues to dwell, are the Bogomils and their converts. As habitations of the Spirit they spoke of themselves as parents of God.[2]

(6) People of the true faith cannot die, but may be said 'tanquam in somno transmutari.'[3]

(7) Their own place of assembly (*synagogam*) they called Bethlehem, because there Christ, or the Word of God, is truly born and the true faith preached.[4] All other so-called sacred temples are the home of demons.[5]

(8) Accordingly their attitude to the 'Church' was hostile throughout. Quoting Mt 4^{13} ('and leaving Nazareth, he came and dwelt in Capernaum'), they applied the term 'Nazareth' to the 'Church,' reserving 'Capernaum' to themselves.[6] All the Beatitudes were spoken concerning them, not the 'Church';[7] and not to the latter has been given the power to cast out demons or do any wonderful work.[8] As to the Sacraments of the Church, its Baptism is that of John, not Jesus, of the water, not the Spirit; and those who come to it are Pharisees and Sadducees.[9] For John the Baptist was a servant of the Jewish God, Satanael. They despised also the Church's doctrine and practice of the Lord's Supper.[10] It seemed to them a sacrifice to evil spirits. Their own conception made the Supper merely symbolical of communion with Christ as the bread of life come down from heaven—a consistent outcome of their Docetism. Equally consistent was their protest against the worship of the Virgin Mary, of the Saints, and of images.[11] When the Church attempted to rebut the protest by appeal to the miracle-working virtue of relics, they did not deny the miracles, but ascribed them to the evil spirits which attended the so-called Saints in life,[12] and were permitted to go on working after their death. Similarly the power of the crucifix over the demoniacal world was not denied in some cases, but was set down to the fact that the crucifix is a symbol welcome to evil spirits, inasmuch as it was the cross by which they were fain to have compassed the death of Christ.[13]

(9) On the ground that the demons, under Satanael, possess a certain power for an appointed time,[14] and that it is permissible to secure safety from unjust treatment by doing them outward honour, they took part in Church worship.[15] But they had their own secret 'conventicles' and a definite mode of initiation. After the candidate had made ready by confession of sins, fasting and prayer, the president laid the Gospel of John on his head, and together with the brethren invoked the Holy Spirit and repeated the Lord's Prayer.[16]

[1] § 5. Neander (*Church Hist.* viii. 355) makes them say that the Holy Spirit was an emanation from the Father.

[2] § 22. 'Aiunt suos omnes in quibus Spiritus sanctus habitat, Dei parentes et esse (πάντας θεοτόκους καὶ εἶναι).'

[3] § 23. [4] § 28. [5] § 18. [6] § 34.

[7] § 35. [8] § 13. [9] §§ 16 and 31.

[10] § 17. 'Mysticum, venerandum sacrificium contemnunt atque despiciunt.'

[11] § 11. [12] § 12. [13] § 14.

[14] Until the end of the 7000th year (the seventh æon).

[15] § 20-21. (*a*) *The Lord said* (in one of their Apocryphal Gospels): 'Daemonia colite, non ut vobis prosint, sed ne obsint'; (*b*) 'omni ratione saluti vestrae consulite'; cf. § 25.

[16] The 'Pater Noster' was the only prayer they thought it right to use (§ 19). They recited it 7 times daily and 5 times nightly.

A probationary period of strict abstinence followed. Then, if approved, he came a second time into the assembly, when, with his face toward the east, the Gospel of John was again laid on his head, the brethren touched his head with their hands, and sang together a hymn of thanksgiving. It is admitted by their enemies that the moral ideal set before the candidates was a high one. They were to keep the precepts of the Gospel, and fast[1] and pray, and be pure in life and compassionate and humble and truthful and loving to one another, and without covetousness.[2] Nor is there any evidence that the charge of hypocrisy and secret vice had any foundation in fact. The Bogomil practice, as well as standard, seems to have been far above the average level, and to have had no small effect in attracting those whom the corruptions of the Church repelled.

(10) The monk and physician Basilius seems to have been the first martyr of the sect. He did not recant the confession obtained from him in the manner already described, and was led away to prison. This was about 1111, at which time he had governed the community of the Bogomils for 40 years. In 1119 he died at the stake.[3] Many others were 'ferreted out' by the combined zeal of Alexius the Emperor and Nicholas the Patriarch—especially (it is said) from among the laity and clergy of Constantinople. Some abjured their 'errors' under threat of punishment or promise of reward; some remained firm and went to lifelong imprisonment.[4] But the heresy lived on for centuries—the same in substance everywhere, though modified in detail here and there. A strong influence on its side was the monk Constantine Chrysomalus, whose writings were condemned by a synod at Constantinople in 1140. Another synod at Constantinople in 1143 deposed two Cappadocian bishops as Bogomils—a sign that the heresy had spread to Asia Minor. About 1230 the Patriarch Germanus complained of its wide-spread activity in the capital, and of the success with which its emissaries wormed themselves into private houses and made converts. In Bulgaria, most of all, it held its ground, and did so in the form of an organized Church-community. Distinct traces of this are met with as late as the second half of the 14th cent., and the smaller societies into which it separated are traceable to a much later time.

BOLDNESS (Christian).—'Boldness' (παρρησία) is used in the NT to describe the perfect confidence which the Christian, depending upon Christ and His work, has in his approach to, and in all his dealings with, God. Three passages may be cited as illustrating the idea: (i.) Heb. 4^{16} 'Let us therefore draw near with boldness unto the throne of grace'; cf. Heb. 10^{19}, Eph. 3^{12}. (ii.) Heb. 10^{35} 'Cast not away therefore your boldness, which hath great recompense of reward'; cf. Heb. 3^{6}. (iii.) 1 John 4^{17} 'Herein is love made

[1] The Bogomils fasted three times weekly—'secunda et quarta et sexta die' (§ 25).

[2] § 26.

[4] *Ib.*

perfect with us, that we may have boldness in the day of judgment'; cf. 1 John 3^{21}. In (i.) the 'boldness' denotes the perfect confidence with which the Christian approaches God in this present world; in (ii.) the confident expectation, or joyful and hopeful assurance, which he has with regard to his future relationship with God; in (iii.) the boldness, conceived as existing in the future, denotes the absence of fear, or the simple confidence, which the Christian will experience in the day of judgment. Of this boldness certain important facts require to be stated.

1. It was a new ingredient put into the religious consciousness by Christianity, and is a distinctive feature of the Christian faith. To come *boldly* to the throne of grace is a new and living way (Heb. 10^{19}). This can be seen by a comparison between the way in which man approaches God under the OT dispensation, and the way in which the Christian approaches Him under the new covenant. In the OT man approaches God with fear and trembling; he stands afar off 'at the nether part of the mount' (Ex 19^{17}); even 'Moses said, I exceedingly fear and quake' (Heb. 12^{21}); in the NT man approaches with boldness 'the city of the living God, the heavenly Jerusalem,' 'God the judge of all,' and 'Jesus the Mediator of a new covenant, and the blood of sprinkling' (Heb. 12^{22-24}).* It will be found, too, that in this matter of boldness the Christian religion is distinct, not only from the Hebrew, but from all other religions. Fear and shrinking rather than boldness and confidence are, universally, the concomitants of the natural man's approach to the Unseen and Eternal. The Christian alone has boldness of access to the throne of God.

2. The ground of Christian boldness is Christ, and especially His atoning work; it is not any virtue or grace which the Christian may have in himself or of himself; the virtue and grace of Christ constitute the sole ground of boldness. In Christ the Christian has a great High Priest with whom alone he can boldly approach the throne of grace (Heb. 4^{14-16}, Eph. 3^{12}; cf. Rom. $5^{1.2}$); in Christ's blood he has a sacrifice for sin with which he can boldly enter the Holy Place (Heb. 10^{19}). In 1 John $4^{17.18}$ the love of God is perfected in the Christian's boldness, and perfect love casts out all fear; but the perfect love of God is, according to this Epistle, embodied in Christ and His propitiatory work (1 John 4^{10}), so that 1 John falls into line with Hebrews and Paul in making Christ and His work the ground of Christian boldness. Whether the Christian had in Christ and Christ's work valid grounds for his spiritual confidence is a question whose discussion does not lie within the scope of this article, but it is a simple historical fact that on the ground of Christ and His work, and united to Christ and Christ's work by faith, the Christian found a new standing—one of confidence and joyful assurance—before God, and exhibited it to the world.

3. Christian boldness is not inconsistent with humility and reverence before God. The Christian is bold when he realizes the perfect and sufficient right which he has in Christ to approach God, but humble when he realizes that this right is not in himself at all but in Another. And for the grace which has given him such boldness and freedom of access he can feel nothing but grateful reverence. In the Christian consciousness, boldness and humility are met together, confidence and reverence have kissed each other.

4. Christian boldness must be distinguished from certain other forms of courage or audacity. (i.) From the audacity which defies all authority, which fears neither God nor man, and which leads a man to be and to do whatsoever he will. Such audacity is not boldness towards God (1 Jn 3^{21}); it leads away from God. It is irreligious and immoral in its tendency, and exercises itself in the sphere directly opposite and opposed to the sphere of Christian boldness. (ii.) From the courage or confidence which is due to an imperfect or incomplete conception of God. Where God is conceived as pure clemency or simple kindness, and as having a forgiveness so easy to grant that it amounts to an indifference to sin, He can be approached with a certain boldness, which, however, is but the courage of a moral ignorance and spiritual blindness as to the true character of God, and is very different in religious quality from the boldness of the man who holds God to be so holy that, apart from a perfect High Priest and a sufficient sacrifice, he dare not approach Him. (iii.) From courage in the face of difficulty, or danger or opposition in the world. From such natural courage the spiritual boldness of the Christian differs in several respects. The spheres of their exercise are different. Natural courage exercises itself in the world of phenomena, Christian boldness is towards God and exercises itself in the world of spiritual realities. Then natural courage requires for its exercise danger or difficulty, Christian boldness has no difficulty or danger to face, for all difficulty of approach to God has been removed by Christ. Natural courage takes risk, Christian boldness feels no risk; it has 'full assurance.'

5. But, while Christian boldness is in itself distinct from natural courage, it was doubtless the secret and source of the marvellous bravery which was shown by members of the Apostolic community in face of danger and death.* Perfect love casts out all fear, first the fear of God, and then of everything in God's world.

6. This article would not be complete without a reference to the boldness of Jesus. In the Fourth Gospel boldness is mentioned seven times as characteristic of the bearing and speech of Jesus (cf. Mk 8^{32}). Then it need only be mentioned that confidence and assurance were supremely evident in the attitude of Christ towards God. Notice His attitude at the grave of Lazarus, or as He draws near to the Cross.

For boldness in general sense, see COURAGE.

D. RUSSELL SCOTT.

BOMBAY.—The Presidency of Bombay, the most western of the provinces of India, takes its name from that of its capital city, which is believed to be derived from the title of the local goddess, Mumbā or Mambā Devī, interpreted to mean Mahā-Ambā, the great Mother-goddess of the non-Aryan population. Her shrine, which once stood on the site now occupied by the Esplanade at Bombay, was removed to the Bhendī Bāzār in the native city, where she still receives the offerings of her worshippers. The Presidency, as now constituted, consists of scattered groups of districts lying along the W. coast of the Peninsula, from lat. 13° 53′ to 28° 29′ N., and includes an area of 188,745 square miles, and a total population of 25,424,235.

The religious conditions of a great Indian province have been discussed in some detail in the case of Bengal (wh. see); and separate articles dealing with the more important divisions, sacred places, and castes in the Bombay Presidency illustrate so many phases of the local religious

* The passage He 12^{18-24} powerfully presents the contrast between the old (OT) and the new (NT) way of approach to God, though the actual word 'boldness' does not occur.

* *παρρησία* is used of the boldness which the Apostles showed in bearing and speech (Ac 4^{13}); *παρρησιάζεσθαι* is used frequently in the Acts of the fearless preaching of the gospel.

beliefs that it is unnecessary to discuss them in detail (see, for instance, AMARNĀTH, BARODA, DWĀRKA, ELEPHANTA, ELLORA, GIRNĀR, GODĀVARI, GOKARN, KISTNĀ, NARBADĀ, PALITĀNA, SOMNĀTH; and, for castes and tribes, BAIRĀGI, BANJĀRA, BHILS, DRAVIDIANS (North), MAHĀR, RĀJPUT, RĀMOSHI, YOGI). In this article, therefore, it is proposed merely to give a general sketch, historical and descriptive.

1. Environment and its influence upon religion.—In the case of Bombay, perhaps more clearly than in other provinces, the varied environment of the people has influenced their religion. The Presidency consists of several regions widely differing in climate, fertility, and accessibility to external influences, as well as in the ethnical origin, history, and character of their population.

(*a*) *Sind.*—Thus, beginning from the extreme west, we have the valley of the Indus, the climate of which, owing to its prevalent aridity and the absence of the monsoons—a condition relieved only by a great system of artificial irrigation—ranks among the hottest and most variable in India. By its situation it was specially exposed to the attacks of the Arabs from the west, which began early in the 8th cent. A.D., and rapidly reduced the delta to submission. The original population consisted of an Aryan race with a non-Aryan substratum, leavened by an important element derived from foreigners, including the Ephthalites or White Huns, whose incursions ceased not long before the armies of Islām appeared upon the scene. The permanent result of the Arab invasions has been that, at the present time, rather more than three-fourths of the population are Musalmāns.

(*b*) *Cutch, Kāthiāwār, and Gujarāt.*—Farther east come Cutch (Kachchh), Kāthiāwār, and Gujarāt: the first almost an island, severed from the mainland by the Rann, half desert, half morass; the second a peninsula, stretching westward to the Arabian Sea; the third a fertile plain, watered by the rivers Narbadā and Tāptī—the Garden of India, as it used to be called before its recent devastation by famine. This region was from the earliest times exposed to invasion from the north of India. The inscription of the Satrap Rudradāman, engraved on the rock of Girnār in Kāthiāwār, records the establishment, in A.D. 150, of the Saka or Scythian dynasty, known as that of the Western Satraps. Kāthiāwār and Gujarāt seem to have been the most southerly tracts which came under the rule of these foreigners, and the theory advanced by Sir H. Risley (*Census Rep.* 1901, i. 514), that a well-marked Scythian element can be identified in the population of the Deccan, will not bear examination.

(*c*) *The Konkans.*—The remaining seaboard districts of the Presidency, included under the general name of the Konkans, are separated from the central region by the barrier of the western Ghāṭ range, which, until it was pierced by British road and railway engineers, formed a permanent obstacle to communication between the coast and the interior. This portion of the western seaboard was from the most ancient times the seat of a flourishing trade, and formed the centre of commercial and intellectual intercourse between India and the nations of the West. Perhaps as early as 1000 B.C. trade routes were established between its ports and those of the Red Sea. Communication with the Gulf of Persia and the cities in the Tigris-Euphrates valley certainly started not later than 750 B.C., and probably dates from a much earlier period. About the beginning of the Christian era, commerce was opened between Gujarāt and Rome; a colony of Jews from Yemen is believed to have reached Kolāba in the 6th cent. A.D.; the Parsis, driven from Persia by the advancing armies of Islām, landed at Sanjan in the Thāna district in A.D. 775. The long line of Christian missionaries to W. India begins with Pantænus (189-90);* and the seed planted by him and his successors continued to grow until the Portuguese, established in Goa in 1510, steadily undertook the conversion of the native races which fell under their control. This continuous intercourse between this part of India and the West must have profoundly affected the religious beliefs of the people. To it, with some measure of probability, has been attributed the growth of the conception of lively faith in a personal Godhead, which is a leading tenet of the Vaiṣṇava sect. This, however, is strenuously denied by Hindu writers (see BHAKTI-MĀRGA).

(*d*) *The Deccan.*—In direct contrast to the seaboard is the scantily watered, comparatively unfertile, plateau known as the Deccan (Dakkhin, Skr. *Dakshiṇa*, 'that on the right hand,' 'southern'). While the barrier of the W. Ghāṭs divides it from the coast region, it is separated from N. India by the Vindhyan and Mahādeo ranges, and in ancient times was specially isolated by the tract of forest country known to the ancient Hindus as Daṇḍakāraṇya, which has been identified with Mahārāshṭra, the region now occupied by the Marhaṭa (Marāthā) people. This in early Hindu legends is said to have been occupied by fierce demons (Rākshasa), in other words, the non-Aryan tribes who resisted the pressure of the new civilization from the north, and were closely akin to races like the Kunbī, the predominant element in the present population. In the Deccan the sturdy peasantry were much less accessible to priestly control than the less manly races of the seaboard. In Gujarāt the preservation of the original Hindu beliefs was due chiefly to the Rājput aristocracy, largely recruited from Huns and Scythians admitted to Hinduism; the wealthy trading classes devoted themselves to the building and endowment of temples; even at present among the laity there is found a sectarian fervour absent in other parts of the Presidency. The condition of religious thought in the Deccan was and is very different. Here there is a lower general average of wealth, culture, and religious devotion. The population is more scattered, and is absorbed in the care of the precarious crops which alone the soil produces. Consequently, like the practically minded Jāṭ of Upper India, the Deccan Kunbī or Marhaṭa, *parcus deorum cultor et infrequens*, cares little for the Brāhman, whom 'the wider political education of the Deccan and the freedom from the competition of other literate classes have led to prefer the occupation of the layman to the segregation of his own fraternity in religious institutions' (Baines, *Census Rep.* 1881, i. 128). The Marhaṭas are of opinion that the spiritually-minded Brāhman should not interfere in secular affairs; and those 'who devote their lives to the study of what Hindoos conceive the divine ordinances are held in great esteem; but otherwise, in the Mahratta country, there is no veneration for the Bramin character' (Grant Duff, *Hist. of the Mahrattas*, 5). Śivājī, the founder of the Marhaṭa State, steadily pursued the policy of appointing Brāhmans to the highest civil posts in the administration; and the Peshwa, or Marhaṭa Mayor of the Palace, was always a Brāhman. Thus the modern Marhaṭa

* It is possible, however, that the 'India' of Pantænus was really S. Arabia (*PRE*[3] xiv. 627); cf. Servius, *ad Georg.* ii. 116: 'sed Indiam omnem plagam Aethiopiae accipiamus,' and see Lipsius, *Apokryphe Apostelgeschichten und Apostellegenden*, II. ii. 63-65, 132-135; Möller, *Lehrb. der Kirchengesch.* i. 108. On the other hand, it is tolerably certain that Christianity entered India before 200; cf. Lassen, *Ind. Alterthumskunde*, ii.[2] 1118-1123; Aiken, *The Dhamma of Gotama the Buddha and the Gospel of Jesus the Christ*, 288-297; Hopkins, *India Old and New*, 140 f., 167; Bergh van Eysinga, *Ind. Invloeden op oude Christelijke Verhalen*, 118-120.

Brāhman is reared to cherish the tradition that his forefathers directed the policy of the last independent Hindu State in the Peninsula; and looks with jealousy on the Government which has replaced it. Poona has become a centre of restless intrigue, to which much of the recent disloyalty in Bengal, and in particular the modern deification and cult of Sivājī, can be clearly traced. Next to the Kāśmīrī, the Marhaṭa Brāhmans are perhaps the most capable Hindus in the Empire (T. C. Arthur [A. T. Crawford], *Our Troubles in Poona and the Deccan*, 1897, *Reminiscences of an Indian Police Official*, 1894).

2. **Lingāyats.**—The independence of Brāhman authority, which is characteristic of the Marhaṭa, was possibly one of the main causes of the growth of the remarkable Lingāyat sect, which will form the subject of a separate article. They have their own priests, and have long severed all connexion with the Brāhmans. But the old leaven is still working, and they now exhibit a tendency to revert to Brāhmanical Hinduism, with which they claim their creed to be coeval, and are attempting to apply the fourfold caste organization of Manu to their social divisions (Enthoven, *Census Rep.* 1901, i. 387).

3. **Extension of Brāhman influence into S. India.**—The process of bringing that portion of the Peninsula which lies S. of the Narbadā within the Brāhmanical fold probably began with the peaceful settlement of Brāhmans on the eastern and western coasts. This may have occurred at an early period, when the Aryans had worked their way into the Sind delta and Gujarāt on the one side, and down the lower Ganges valley on the other. In Bombay the movement further south was effected either by the sea route or along the western coast districts, where the mountain ranges diminish in altitude and melt into the alluvial plains of Gujarāt, the valleys of the Narbadā and the Tāptī. The advance into the Deccan was checked by the natural obstacles already referred to, and probably occurred at a period long subsequent to the movement along the coasts. Prof. Bhandarkar, by an examination of the early grammarians, has shown some reason for believing that the Aryans had acquired no knowledge of Southern India before the 7th cent. B.C.; that up to this time their advance had been along the coast districts; but that by B.C. 350 they had become acquainted with the country as far south as Tanjore and Madura (*BG* i. pt. ii. 141). These conclusions cannot be regarded as definitely established, and the view that the Brāhmanism of S. India is of comparatively recent origin has been disputed by Hindu writers. But the theory of a comparatively late introduction of Aryan culture fits in well with the existing facts, and it involved important consequences. Not only have the local Dravidian languages held their ground, but art and general culture have developed on original lines. Still more is this the case in the domains of religion and politics. The new-comers found well-organized communities and ancient kingdoms in occupation of the country. The forms of belief characteristic of the non-Aryan races retained their influence over the minds of the people. The early Tamil literature shows that the evolution of religion in the south took a shape very different from that which is, in the case of the northern races, more familiar to students of the development of Hinduism (V. Kanakasabhai, *The Tamils Eighteen Hundred Years Ago*, 1904, p. 227 ff.).

4. **Buddhism.**—The extension of Buddhism into the region south of the Vindhyan range was the work of Aśoka (*c.* B.C. 272–231; see AŚOKA). Two copies of his fourteen edicts have been found on the W. coast; one, fragmentary, at Sopāra or Sūrpāraka in the Thāna District, N. of Bombay; the second, nearly complete, on the Girnār hill, E. of the town of Junāgarh in Kāthiāwār (Smith, *Asoka*, 103). The discovery of three copies of the minor Rock edicts in the Chitaldrūg District of Mysore shows that his authority extended as far south as that kingdom (Rice, *Mysore*², ii. 499).

The progress of the three rival faiths, Buddhism, Jainism, and Brāhmanism, is recorded in a series of monuments, the rock-cut halls and temples of W. India, of the greatest historical and religious importance.

'When their story is carefully examined, it appears that they are spread pretty evenly over more than a thousand years of the darkest, though most interesting, period of Indian history; and throw a light upon it as great or greater than can be derived from any other source. In addition to these claims to attention, the western caves afford the most vivid illustration of the rise and progress of the three great religions that prevailed in India in the early centuries of our era and before it. They show clearly how the Buddhist religion rose and spread, and how its form became afterwards corrupt and idolatrous. They explain how it consequently came to be superseded by the nearly cognate forms of Jainism and the antagonistic development of the revived religion of the Brāhmans. All this, too, is done in a manner more vivid and more authentic than can be obtained from any other mode of illustration now available' (Fergusson-Burgess, *Cave Temples*, 166).

More than nine-tenths of the caves at present known are found within the limits of the Bombay Presidency. The view once held, that they are in some way connected with the monuments of Egypt, is now rejected; and their abundance on the W. coast is due simply to the fact that the geological formation of that region, with horizontal strata of amygdaloid and other cognate trap-formations, generally of considerable thickness and uniformity of structure, and with their edges exposed in perpendicular cliffs, favoured the construction of such excavations to serve as halls, temples, or monasteries (Fergusson, *Hist. of Indian Arch.*, 1876, 107).

Many of these caves are described in separate articles (see AJANTA, KĀNHERI, ELLORA, NĀSIK); and therefore it is only necessary to say that, as a whole, they fall into two groups, though naturally the same site was occupied by successive builders, and accordingly the distinction of schools of Buddhist belief is not always rigidly observed. The first group represents the Hīnayāna school, the earlier form of Buddhism. This includes the caves at Junāgarh and other sites in Kāthiāwār, dating from B.C. 250 to the Christian era; those of the Konkans and Deccan, all S. of Bombay, dated between about B.C. 200 and A.D. 50; those E. of Bombay, in the range of the W. Ghāṭs, dated between B.C. 250 and A.D. 100; those at Junnar, Nāsik (wh. see), and the earliest of the Ajanta (wh. see) group, which are of various ages, ranging from B.C. 100, and including examples of the Mahāyāna, or later school, as late as the 7th cent. A.D.; those at Mārol and Kānheri (wh. see) near Bombay, between B.C. 100 and A.D. 150. The second group, that of the Mahāyāna school, extends from the 4th nearly to the 8th cent. A.D., and includes the hall at Junāgarh, the later specimens of the Ajanta series, and those at Aurangābād and Nāsik.

These monuments bear eloquent testimony to the religious fervour, generosity, and taste of the rulers, nobility, and merchant princes who provided funds for their excavation and decoration. Their endowments must have supported a large number of monks. The Buddhist pilgrim, Fa-hien, who began his travels in A.D. 399, gives a lively account of the monastery at Kānheri, and describes the magnificence of the festal decorations, the beauty of the relic-shrines, the nightly illuminations, the rich endowments of the community (Beal, *Fah-hian*, 55, 76, 178). Hiuen Tsiang, a later pilgrim, who in A.D. 641 visited the capital (probably Nāsik) of the great king Pulakeśin II.,

who came to the throne about A.D. 608, found some hundred religious establishments (*saṅghārāma*), containing about 5000 monks (Beal, *Si-yu-ki*, ii. 257). But even at this time Buddhism was in a stage of decay. Possibly the picture which the same writer gives of the famous establishment at Amarāvatī (wh. see) is true of other foundations of the same kind. 'For the last hundred years there have been no priests (*dwelling here*) in consequence of the spirit of the mountain changing his shape, and appearing sometimes as a wolf, sometimes as a monkey, and frightening the disciples; for this reason the place has become deserted and wild, with no priests to dwell there' (*ib.* ii. 223)—a metaphor possibly referring to the hostility to the faith which was then growing up among the forest tribes. Inscriptions of the Rāshṭrakūṭa period at Mālkhed show that in the 9th cent. A.D. Buddhism was still a living religion, favoured by the authorities in W. India; but that at that time its chief rival, Jainism, was contributing to that change of feeling which ultimately caused its downfall (Fleet, *BG* i. pt. ii. 406). It certainly existed in a weakened form in the Deccan as late as the first half of the 12th century.

5. **Jainism.**—The history of the rise of Jainism —a faith contemporary with the rise of, and resulting from the same causes that gave birth to, Buddhism—is comparatively obscure; and very little is known concerning the process by which it attained a high position in W. and S. India for several centuries. The Jains of the Bombay Presidency are at present represented by two classes: the first, comprising the merchants of Gujarāt, who are remarkable chiefly for their extreme tenderness to animal life, as is shown by the hospitals (*pinjrapol*) established in the chief cities for all sorts of creatures; and the Māṛwāṛī Banyās of Māṛwāṛ in Rājputāna, who are generally money-lenders and immigrants into the Deccan. The second group includes a class of cultivators found chiefly in the Belgaum and Dhārwār districts of the Karṇāṭa or S. Marhaṭa country. The first division is connected with the northern centres of the faith, in Rājputāna and Gujarāt, such as Mount Ābū (wh. see) and Palitāna (wh. see). The second group, that of the southern Jains, represents the relics of a belief which was once the State religion of a large part of S. India. In Mysore, according to Rice (some of his conclusions have been disputed by Hultzsch), it seems to have preceded the teaching of Buddhism by the missionaries of Aśoka, and here it continued to be the official religion of certain dynasties and kings throughout the first ten centuries of the Christian era. Here the three rival faiths, Buddhism, Jainism, Brāhmanism, appear to have existed side by side. In the 8th and 9th centuries A.D. an active revival of Brāhmanism in the form of Liṅga-worship resulted from the missionary labours of Kumārila and Śaṅkarāchārya, which raised Śaivism to a position of superiority over its rivals. In like manner, in the 12th cent. the Vaiṣṇava sectarianism gained ground, and, through the teaching of the reformer Rāmānujāchārya, dealt a deathblow to Jainism. After this the adherents of the Vaiṣṇava and Śaiva doctrines seem to have effected some kind of compromise, of which the form Harihara, uniting the cult of Hari (Viṣṇu) and Hara (Śiva), was the outer symbol. The almost contemporaneous growth of the Lingāyat sect, which popularized the Śaiva cultus, led to the final decay of Jainism as a leading faith in this region, while the later forms of Vaiṣṇavism absorbed all that remained of Buddhism (Rice, *Mysore*[2], i. 459 f.).

6. **Development of Brāhmanism.**—It would be an error to suppose that Brāhmanism suffered a complete collapse during the ascendancy of Buddhism and Jainism. The excavators of many of the Buddhist caves bear names derived from Śaivism, and in the great cave at Bādāmī a Vaiṣṇava temple of the 6th cent. A.D. still survives. Some of the Śaiva caves go back to the 2nd century. But it is only in the 4th cent. that they become common, and nearly all the Hindu caves of later date belong to that sect. The work of Brāhmanical cave-excavation seems to have almost ceased in the 8th century. The methods by which the original Buddhist models were adapted to the Brāhmanical cultus are described by Fergusson-Burgess (*Cave Temples*, 399 f.). The next important architectural development was due to influence from S. India, and resulted in the construction of the remarkable Kailāsa rock-temple in the reign of the Rāshṭrakūṭa king Krishṇa (Kṛṣṇa) I. about A.D. 760 at Ellora (wh. see; Smith, *Early Hist.*[2] 386 f.). The Jains also undertook the excavation of cave-temples, but at a later date than those of the Buddhists or Brāhmans, none of these Jain works being apparently dated earlier than the 7th century. The most important are at Ellora (Fergusson-Burgess, 490 ff.).

7. **Modern Hinduism.**—At the Census of 1901 the Hindus numbered 19,916,438 (78·4 per cent of the total population). Here, as in other parts of India, the line between Animists and Hindus cannot be clearly drawn. The faith of the higher classes of Hindus shows the prevailing characteristics of Hinduism: a polytheism replaced by an enlightened pantheism, and that absence of dogma which is the best asset of Hinduism. This, however, applies only to the more intelligent classes. Apart from the forest tribes, whose creed is pure Animism, the lower stratum of the people still preserves its primitive animistic beliefs, obscured, and to some extent modified, by the veneer of Brāhmanism. Bathing in holy rivers and pilgrimages to the tombs of deified heroes and saints are the chief modes by which purification from tabu and spiritual advancement are believed to be attained. The sacred stone haunted by some spirit, the holy tree or other natural object, the abnormal shape of which indicates that it is occupied by a spirit, the ecstatic possession of the village seer or medicine-man, the various devices by which the spirits of the household dead are brought into communion with the living, or the malignant ghosts of the murderer or his victim, and of the man killed by a tiger or snake, are repelled or controlled—these are the chief elements of the popular cultus. The forces of evil are ever in conflict with those of good, and there is little or no trust in a benign, fatherly Providence.

Sectarianism is imperfectly recognized in the statistics. So far as the Census returns go, the Śaivas or Smārtas, with the kindred Pāśupati, Śaṅkarāchārya, and similar sects, number about 3 millions; while the Vaiṣṇava sects, such as those of the Rāmānuja, Vallabhāchārya, Mādhavāchārya, and Vīravaiṣṇava, number only half a million. In addition to these, affiliated to the Śaivas, come the Lingāyats, numbering 800,000. Many influences may have affected the accuracy of the returns; but, at any rate, the vast majority of the Hindu population were ignorant of the sect to which they belonged, or did not care to record it.

The most important and interesting development is that of the Vallabhāchārya sect of the Vaiṣṇava group, to which Krishṇa (Kṛṣṇa) is the chief object of worship. The immorality of the Mahārājās or heads of this community has attracted much attention since the notorious case decided by the High Court of Bombay ([Karsandas Mulji], *History of the Sect of the Maharajas*, 1865).

8. **Jains.**—Jains, who number 535,950 (2·1 per cent. of the total population) are here, as usual, divided into Digambaras, who worship naked idols and their spiritual preceptors (*gurus*); Śvetāmbaras, who dress and adorn their images; and Ḍhūnḍhiyas, who are opposed to the worship of idols, venerate their preceptors, and dress in white, wearing a linen mouth-band to prevent possible injury to animal life. In Gujarāt, the headquarters of the Jains, the Śvetāmbaras are in excess of the other sects.

9. **Animists.**—As has been already remarked (§ 7), the enumeration of Animists, who in 1901 numbered 94,845 (0·4 per cent. of the total population), is incomplete, and merely includes those members of some forest tribes who are most completely, in beliefs and cultus, separate from Hindus. Of these tribes the most numerically important are the Kolī, Bhīl, Varlī, Ṭhākur, Dublā, and Kāṭhkarī. They are most numerous in the Districts of Pānch Mahāls, Thar and Pārkar, Thāna, Surat, and Khāndesh. A full account of the Bhīl beliefs will be found in a separate article, and that on the Northern Dravidians gives a general sketch of the forms of Animism which prevail among these tribes.

10. **Muhammadans.**—Muhammadans in the whole Presidency number 4,567,295 (17·9 per cent. of the total population). Their numbers show a tendency to increase, not so much as the result of any special propaganda, but rather because they have been less exposed than Hindus to the stress of plague and famine. For the interesting class of Bohorās or Bohrās, see SECTS (Muhammadan). The Khojas (Pers. *Khwājah*, 'honourable') are remarkable as tracing their origin to Ḥasan Ṣabāḥ, who in the beginning of the 11th cent. A.D. founded the Order of the Fidawī or Fidāī, 'the devoted ones,' known to Europeans as the Assassins (Arab. *ḥashshāshīn*, 'eaters or smokers of the intoxicating hemp drug'), of whom and of their leader, known as Shaikh-ul-Jabal, 'The Old Man of the Mountain,' many marvellous tales are told (Marco Polo, ed. Yule[3], i. 132 ff.; *EBr*[9] ii. 722 ff.; art. ASSASSINS). Their spiritual leader is the Aghā Khān, the descendant of a refugee from Persia, who commands great influence among his followers. Except in Gujarāt and Sind the Shī'ite element is small, and in many districts is confined to the Bohorās and Khojas (for a full account of the origin, customs, and beliefs of the Khojas, see *BG* ix. pt. ii. 36 ff.). A more recent development is that of the Aḥmadīyah sect, followers of Mīrzā Ghulām 'Alī of Kadiān in the Gurdāspur district of the Panjāb. The founder repudiates the necessity of *jihād*, or war against the infidel; traces a parallel between himself, as Messiah or Imām, and the Founder of the Christian faith; claims that his advent was foretold, and that he is charged with the duty of laying the foundations of general goodwill and peace upon earth. On the whole, this sect supplies an interesting example of the influence of Christianity upon Islām (Enthoven, *Census Rep.* i. 69; Rose, *Census Rep. Panjāb*, i. 143).

11. **Jews.**—The Jewish colony in the Presidency numbers 10,860. Like those further south in Cochin, they are divided into a 'white' and a 'black' section. The former claim to be the descendants of the original colonists, whom Dr. J. Wilson, on the ground that none of their names is later than the Captivity, and that all their Scriptures are of early date, believed to represent the Lost Tribes. It is now generally supposed that they came from Yemen in the 6th cent. of our era. Their own traditions fix their exodus in the 2nd cent., while other accounts place it as late as the 15th. The 'white' Jews do not eat, drink, or intermarry with the 'black' section, who are believed to be later converts from Hinduism. The Bombay Jews call themselves Banū-Isrāīl, 'children of Israel,' in preference to Yahūdī, which is the general designation of the race in N. India. In their houses, on the upper part of the right door-post, is placed a box containing a parchment scroll inscribed with a verse from the OT, so fixed that through a hole the word 'The Almighty' (*El Shaddai*) can be read from the outside. Their synagogues contain parchment copies of the Pentateuch (*BG* xi. 85 f., xiii. 273 f.). See art. BENE-ISRAEL.

12. **Christians.**—Christians number 204,961 (1·11 per cent. of the total population). They fall into several groups. The most numerous are the Roman Catholic inhabitants of the old Portuguese settlements now included within British territory, who were originally converted from Hinduism by missionaries from Goa. Those of good birth were admitted to *connubium* by the Portuguese. Though the names of all the Christians of this description are Portuguese, it is only among the upper classes that there is any trace of foreign blood, and here, even, it is now rare. The name of Indo-Portuguese, which is sometimes given to them, is scarcely acknowledged among themselves; and though the higher families speak Portuguese as the home-language, the rest habitually use either Konkanī-Marāṭhī or English. The lower classes continue to follow the hereditary occupations of the castes to which their Hindu ancestors belonged, while the upper have taken to the learned and clerical professions.

'In spite of rumours that have occasionally been heard within the last half century, those who have lived amongst these classes give evidence of the reality of their adherence to the faith of their adoption. There is a very prevalent confusion between Christians of this description and those of Goa. Both are Roman Catholics by persuasion, and both bear Portuguese names, and are under the supervision of priests of that nation. Beyond this the likeness ceases. The Native Christians that come from Goa are mostly domestic servants, an occupation never undertaken by Christians from other districts' (Baines, *Census Rep.* i. 51).

Including recent converts, the Roman Catholics in 1901 numbered 106,655—not far short of half the total Christian population. The remainder are more recent adherents, whose adoption of the faith is the work of various missionary societies, those attached to the Anglican communion numbering 35,614. While the Roman Catholics have slightly fallen in numbers between the last two decennial enumerations, the total number of Christians has increased from 158,765 to 204,961, the rise being greatest in those districts where the pressure of famine has been most severe, an indication that their numbers have been largely recruited from famine waifs supported in missionary orphanages.

LITERATURE.—The best authorities are Sir J. Campbell, *Bombay Gazetteer*, 27 vols. (1873–1904), of which the most useful are those dealing with the general history (vol. i. pts. i. ii.) and those describing the population of Gujarāt (ix. pts. i. ii.); and the *Census Reports*: J. A. Baines, 1882; W. W. Drew, 1892; R. E. Enthoven, 1902. The following also deserve attention: J. Wilson, *Indian Caste* (1877), useful but fragmentary; Major E. J. Gunthorpe, *Notes on the Criminal Tribes of the Bombay Presidency* (1882); A. W. Hughes, *Gazetteer of Sind*[2] (1876); J. Forbes, *Oriental Memoirs* (1813, 2nd ed. 1834); A. K. Forbes, *Rās Mālā, or Hindoo Annals of the Province of Goozerat*[2] (1878); Dosabhai Framji Karaka, *History of the Parsis* (1884); [Karsandas Mulji], *History of the Sect of the Maharajas* (1865). For the political history, see V. A. Smith, *Early History of India*[2] (1908); J. Grant Duff, *History of Mahrattas*[3] (1873). For the religious architecture, J. Fergusson and J. Burgess, *The Cave Temples of India* (1880), and numerous memoirs by the latter writer in collaboration with H. Cousens in the *Progress Reports of the Archæological Survey of W. India*. These *Progress Reports*, vols. i. to ix. in the Imperial Series, numbered i.-v., xxiii., xxiv., xxxii., xxxiii., extending to 1905, have practically superseded the older books, such as Sir T. C. Hope, *Surat, Bharoch, and other Cities of Gujarat* (1866); J. Fergusson and P. Meadows Taylor, *Architecture at Beejapoor*; *Architecture in Dharwar and Mysore* (1866). Among the early travellers, the following, published in the Hakluyt Society series, may be referred to (the dates are

those of publication, not of the voyages): D. Barbosa, *Coasts of E. Africa and Malabar in 16th cent.* (1866); P. della Valle, *Travels in India* (1892); J. H. van Linschoten, *Voyage to the E. Indies* (1885); *India in the XVth Cent.* (1857); F. Pyrard de Laval, *Voyage to the E. Indies*, (1887–90); L. Varthema, *Travels in Egypt, Syria, Persia, India, Ethiopia*, etc. (1863). Other useful travels are: J. Ovington, *Voyage to Suratt* (1696); J. Fryer, *New Account of E. India and Persia* (1698).

BON CHOS.—See TIBET.

BONES.—It may help us to understand the important place occupied by bones in primitive psychology and religion if we recall the nature of their development. 'Osseous tissue . . . consists essentially of an animal matter impregnated with calcium salts' (Huxley, *Physiology*[5], p. 307). 'At a certain period of embryonic life there is no bone in any part of the body. . . . Microscopic examination shows that the calcareous salts are deposited in the intercellular substance' (*ib.* p. 557). Minute passages in a bone allow of its permeation by nutritive fluid, so that 'throughout life, or at all events in early life, its tissue is the seat of an extremely active vital process' (*ib.* p. 311). These facts were, of course, unknown to primitive thought, but they are in some measure paralleled by the early ascription to bones of special psychical significance. Thus we find the words for 'soul' and 'bone' etymologically connected among the Iroquois (*esken*, 'bone,' *atisken*, 'soul'), and the Athapascans (*yani*, 'bone,' *iyune*, 'soul') (Arnett in *Amer. Jour. Psychol.* 1904, xv. 149). Every one is familiar with the frequent references to bones in the OT, where the ascription of sensation to them is not a mere figure, but springs from the definite idea of their inherent vitality, and of the *quasi*-consciousness diffused through them and the whole body (*e.g.* Job 4^{14}, Jer 23^{9}, Ps 35^{10}). The story of Eve's origin, and the phrase 'bone and flesh,' used of relationship,* are also significant. Many popular beliefs witness to the same idea; 'the bones of a murdered man are said to have given out fresh blood when handled by a murderer as long as twenty years, or even fifty, after the murder' (Trumbull, *The Blood Covenant*, 1887, p. 146). Conversely, the life supposed to be still resident in bones can be renewed by anointing them with blood (Jevons, *Introd. Hist. Rel.*, 1896, p. 52). Tylor collects examples of the way in which bones of dead relatives are cared for, and talked to, as though still conscious (ii. 150 f.); he gives them as cases of the fetish-theory, but they are ultimately to be explained as products of primitive psychology.

Funeral customs in general usually yield illustrations, even though more or less obscure, of the same standpoint. A good example out of the great multitude available is afforded by the elaborate burial rites of certain Australian tribes (Spencer-Gillen[b], pp. 530–546). The body is left on a tree-platform until the flesh has disappeared from the bones.† The skeleton, except an arm-bone, is then buried, without being actually touched. The arm-bone, in which the spirit of the dead is supposed to be present, is wrapped up in paper-bark, and figures in various complicated ceremonies. These conclude with the breaking and burial of the arm-bone. 'When once this ceremony of breaking the bone, which they call *anbiringa-tjinta*, has been performed, and the bone deposited in its last resting-place, the spirit of the dead person, which they describe as being of about the size of a grain of sand, goes back to its camping-place in the Wingara, and remains there in company with the spirit

* The Tungusian word for 'family' is *sök*='bones' (Radloff, *Aus Sibirien*, ii. 32).

† For an African method of obtaining the bones rapidly, see Ellis, *Tshi-Speaking Peoples*, 1887, p. 268: 'The chief who falls in battle is lightly buried, and water is poured on his grave many times a day, for some weeks. The bones, thus becoming clean, are taken out and deposited in a chest.'

parts of other members of its totem until such time as it undergoes reincarnation' (*ib.* p. 542). Here the elaborate ceremonial is performed in order that the bone may be broken and the spirit released, without injury to the living or the dead. With this we should compare such a custom as prevails in an African tribe of the Ogowe. 'With a very material idea of a spirit, they seek to disable it by beating the corpse until every bone is broken. The mangled mass is hung in a bag at the foot of a tree in the forest. Thus mutilated, the spirit is supposed to be unable to return to the village, to entice into its fellowship of death any of the survivors' (Nassau, *Fetichism in West Africa*, 1904, p. 234). We may trace a parallel belief in the title 'Crusher of bones,' applied to a member of the Egyptian pantheon (*Book of the Dead*, ch. cxxv.), though here we meet the idea that the bones must be preserved intact in order to ensure resurrection, and the crushing of the bones is conceived as a penalty for falsehood. An ordinary mummy is no more than 'skin and bones.' The preservation of the bones is the dominant practice,* we may say the universal one, where the relations with the dead include more than fear and shrinking. Thus the Carrier Indians (*q.v.*) obtain their name from the practice of their widows, 'who carry the charred bones of their dead husbands about with them in bundles' (Frazer, *GB*[2] iii. 227 n.[3]).† The practice may survive in a modified form, disguising itself as a simple desire to possess some memorial of the dead. Thus 'the Japanese, after taking a lock of hair, a finger-nail, or the *inkobo* (a bone in the throat), which they send back to relatives, burn their dead' (Fox, *Following the Sun-Flag*, 1905, p. 87). A further development is seen in the addition of the skeleton, or part of it, to the family fetish, where the fetish practices prevail (Nassau, p. 325). Bones so kept, and imagined to retain the psychical powers of the dead in a form available for use, claim a natural place in primitive medicine and magic. Australian aborigines use bones in working a magic spell on an enemy (Howitt, p. 359). The Tasmanians attached human bones to the parts of the body affected by disease (Crawley, *Mystic Rose*, 1902, p. 108). The miracle described as following the contact of a dead man with the bones of Elisha (2 K 13^{21}) shows the same belief. Robertson Smith (*Rel. Sem.*[2], 1894, p. 448) refers to the custom of the heathen Arabs, which consisted in fastening unclean things, dead men's bones and menstruous rags, upon children, to avert the *jinn* and the evil eye; he remarks that 'when we find bones, and especially dead men's bones, used as charms, we must think primarily of the bones of sacrifices' (p. 382). Such bones would, of course, possess a special virtue for their users; but their sacrificial character is not essential to such a use, which is amply explained by the psychical theories of primitive thought.

A continuation of the magical theory of bones is seen in the veneration of relics of the saints. One of the earliest and best known examples is that

* On the other hand, Ashurbanipal enumerates the bones of an enemy among his spoil (Jastrow, *Bab.-Assyr. Rel.* p. 602); cf. Am 2^{1}.

† Bones play an important part in many folk-tales dealing with the renewal of life in the dismembered dead (*CF*, pp. 91–95, 100 f.), doubtless because, as MacCulloch says, 'the bones, as less subject to decay than the flesh, may have seemed to early men the basis of a renewed life.' While some of these tales declare that, if a single bone be lacking, the person revived will be correspondingly deficient, others express the belief that only a portion of the skeleton (especially the spine; cf. the Roman beliefs concerning the *os sacrum*) will be sufficient to restore the entire person to life. As early as the palæolithic age skeletons were carefully preserved in Gaul, where they were frequently coloured, either in whole or in part (especially the skull), with red pigment—a usage still observed by the Alfurus of Ceram, and by certain South American, Papuan, and Australian tribes (Renel, *Les Religions de la Gaule avant le Christianisme*, 1907, pp. 49–51, 53 f.).

of Lucilla of Carthage, who habitually kissed a martyr's bone before partaking of the Eucharist (cf. *DCB*, *s.v.* 'Lucilla'). Newman quotes Theodoret, with apparent approval of his theory of the virtue of the bodies of martyrs: 'And though each body be divided, the grace remains indivisible; and that small, that tiny particle is equal in power with the Martyr that hath never been dispersed about' (*Development of Chr. Doctrine*, p. 374). This may be accepted as a true statement of primitive theory, especially in regard to the bones, as being the parts most easy to preserve; it is paralleled in the devotion of Greek cities to the supposed bones of their respective heroes (Rohde, *Psyche*, i. 162). Primitive thought, however, applied the theory on a wider scale, and included animal as well as human bones. 'Among the Kalang of Java, whose totem is the red dog, bride and bridegroom before marriage are rubbed with the ashes of a red dog's bones' (Frazer, *Totemism*, p. 33). We frequently meet with the belief that the bones of animals slain in the chase must be carefully dealt with, to secure their resurrection and the future supply (Frazer, *GB*[2] ii. 415 f.). Sometimes the soul of the dead animal is thought to be aware of the fate of its bones, and the future success of the hunter depends on its proper propitiation (*ib.* p. 405).

From various customs in regard to bones, Frazer infers that 'it is a rule with savages not to let women handle the bones of animals during their monthly seclusions' (note on p. 221, vol. iii., where various customs are collected). On the other hand, among certain Indian tribes we find girls at puberty carrying bone implements, with which to scratch themselves, and with which to drink. The girl then drinks water through a tube made of the leg of a crane, a swan, or a goose (*ib.* p. 213). Here the virtue of the bone, no doubt, protects the supply of water from the perilous influence of her condition.

Amongst the many other usages in which bones figure may be mentioned the bonfire (originally 'bone-fire,' cf. Jevons, p. 150, and Skeat's *Dict.* *s.v.*), the practice of fastening the bone of a murdered man on to the spear that is to avenge him (Spencer-Gillen [b], p. 554), and even the use of a cleft bone as a token, noticed by Doughty (*Arabia Deserta*, 1888, ii. 360).

BONFIRE.—See FIRE.

BONI HOMINES (corrupted into Bononii or Bonosii).—See PERFECTI.

BOOK OF LIFE.—The science of the Semitic East was based upon the axiom that the constitution of this lower world corresponds to that of the heavens above, as seen in the cosmos and its cycle. The whole course of events upon the earth, it was believed, was prefigured in the cyclical phenomena of the higher spheres. On its mythological side, therefore, the doctrine could postulate the existence of celestial tablets on which were inscribed both the wisdom of heaven and the history of earth.

1. The books (tablets) of wisdom.—(1) *Babylonia.*—According to Babylonian science, the process of the world realizes itself in æons, which arise out of the primal sea; and this world-ocean, accordingly, is regarded as the seat of Divine creative wisdom. The mythical representative of the primal sea was, in the previous æon, Mummu (Damascius: Μουμις = νοητὸς κόσμος; cf. *bît mummu*, 'the house of wisdom' [Rawl. 5, 33*a*]); in the present æon he is called 'Lord of Water' (*i.e.* of the ocean, which was regarded as ZU-AB, 'house of wisdom'). He is therefore 'father of the gods,' 'creator of Adapa, the first man' (*zer amelûti*, 'seed of the human race'), who, as the 'sagacious one' (*Atrahasis*), receives from his creator wisdom, but not eternal life. The tutelary deity of all who are endowed with wisdom and art is Ea. He is 'the god of wisdom, of potters, smiths, singers, priests, of Kalû-mariners, jewellers, stone-cutters, metal-workers.' A Bab. text (*Cuneiform Texts*, xv. 50) speaks of the *šipru* (=Heb. סֵפֶר, 'book') of the god Ea, the duty of studying which falls specially upon the king. Ea is also the source of the wisdom of the priests, *e.g.* the 'secret of heaven and earth' which was acquired by Enmeduranki, the progenitor of the prophetic priests of Babylon; the 'secret of Ea' and the 'word from the ocean' are mentioned in the Bab. ritual-tablets (cf. also the table of commandments below, p. 793).

The myth of Ea has come down to us in legendary form from the χαλδαικὴ ἀρχαιολογία of Berosus, the priest of Marduk (*Fragm.*, ed. Lenormant, No. 1 from Alexander Polyhistor = *FHG*, ed. Müller, ii. p496, frag. 1, 8; Euseb. *Chron.* i., ed. Schoene, 13 f.). The present writer has reproduced the legend in Roscher, iii. 577 ff., as follows:

'It is recorded that a great multitude of the people of different races who inhabited Chaldæa were gathered together in Babylon, living the unruly life of beasts. In the first year there came forth from the Erythræan Sea, at the place where it touches Babylonia, a being endowed with reason and having the name Oannes. Its body was in all respects like that of a fish, but from beneath its fish's head protruded a second head, of human shape. It had also the feet of a man, these having been formed from its tail, and it had a human voice. An image of it had survived till that time. This creature, he continues, lived by day amongst human beings without taking food, and conveyed to them the knowledge of written characters, the sciences (μαθημάτων), and sundry arts; it taught them regarding the peopling of cities and the erection of temples, the introduction of laws and the measuring of land; it instructed them in the sowing and the ingathering of crops, and, in a word, in all that pertains to the satisfaction of men's daily needs (ἡμέρωσις). No further discovery in such matters has been made since that time. At sunset the creature sank once more in the sea, and spent the night in the water, for it was amphibious. Other beings of similar nature appeared at a later time (coming forth likewise from the Erythræan Sea, as is added by Syncellus in another report), regarding which Berosus purposes to write in his history of the kings. Oannes, however, also wrote a book (λόγος) dealing with origins and the formation of States, and this he delivered to mankind.'

The idea of such a book presents itself once more in the passage treating of the destruction of the world by the Flood, *i.e.* the return of things to their original condition in the primeval ocean, and the restoration of the world. Berosus narrates that Kronos commanded Xisuthros to frame a record, in written characters, of all things in their beginning, middle, and end, and to deposit this in Sippar, *i.e.* the 'book-city.' After the Flood the children and kinsmen of Xisuthros migrated to Babylonia, carried away the writings from Sippar, and at the command of their head disseminated them amongst mankind.

(2) *Egypt.*—The notion of a primordial Divine wisdom inscribed in books is found generally amongst the peoples of antiquity. In Egypt, as in Babylonia, the first age of the world was supposed to have been in a special sense the era of wisdom. The representative of the Divine wisdom, according to the Egyptians, was Thoth (corresponding to the Bab. Nabû [= Nebo], the Divine scribe of Marduk, who received wisdom from his father Ea), the amanuensis of the gods, and it was he who conferred the arts of speech and writing upon mankind. The texts of the Book of the Dead were regarded as the 'Books of Thoth.' In ch. 64 the text is traced back to a discovery in On (Heliopolis), where it had been transcribed 'in the very handwriting of the god' during the reign of King Menkara (Brugsch, *Rel. der Ägypter*, 20 f.). A Leyden papyrus (see Lange, *Berl. Akad. d. Wissensch.* [1903] 602 ff.), containing a prediction of a time of blessing and a time of curse, says that the latter will be ushered in by 'the opening of

the secret places, and the purloining of the books of the sanctuary.' The priests, as bearers of revelation, are called 'scribes of the book of God.' A memorial-stone in Abydos preserves a record of what Rameses IV. had learned in the house of life (cf. the Bab. name of a temple *E-ti-la*, 'the house of life') from his constant study of the books. The text of this contains the mystical teachings regarding Osiris. Here it is said that the majesty of Thoth stands beside Rê and Osiris for the purpose of executing their Divine commands (Erman, *Egyptian Religion*, p. 80; A. Jeremias, *Im Kampfe um den alten Orient*, i. 67). With this agree the statements of classical writers, who represent Thoth as the founder of theology and political economy, of the sciences and the arts. Clement of Alexandria enumerates forty-two 'Books of Thoth,' of which the first ten, or those of the prophet, treat of the law and of the gods, the following ten contain regulations regarding sacrifices and feasts, and the third ten the mystical cosmography; the next four embrace astronomy and the science of the calendar, two contain hymns about the gods and the kings of primeval times, while the last six deal with the science of medicine. Brugsch (*op. cit.* 449 f.) is of opinion that he can trace in part the titles of these books in a hieroglyphic text of the temple of Edfu.

(3) *Persia*.—The books of the Avesta also claim to constitute a Divine book, and it appears to the present writer that they may be brought under our present category. According to Haug, Avesta means 'knowledge,' *i.e.* Divine knowledge; its root, like that of Veda, being *vid*. Ahura Mazda together with Asha formed 'the word of bliss' by the agency of Vohu Manō (i.e. *logos*, corresponding to Marduk, the son of Ea), and revealed it to Zarathushtra, who diffused the Divine teaching amongst men (cf. *Gāthā*, *Yasna* xxix.). According to *Vendīdād* II., Yima, the first man, was chosen for the task of preserving the celestial truth upon the earth. The religious system of Zarathushtra purports to be an attack upon error, and a return to the truth and knowledge issuing from the original wisdom revealed by Ahura Mazda (cf. *Gāthā*, *Yasna* li. 13, xliii. 3, liii. 2, xxxi. 2). In *Gāthā*, *Yasna* xlviii., he who knows the secret doctrine is praised as a true teacher; possessing the power of Vohu Manō he is equal to Mazda himself in intelligence.

(4) *India*.—The early Aryan religion of India and the Indian systems of religion allied thereto consider the Veda ('knowledge') as the primal wisdom. True, such a statement merely expresses a theory, for the hymns of the Veda are partly of a secular character, and first acquired their religious significance from their association with sacrificial worship. It is an article of belief that the Vedas were composed by the ten *ṛṣis*, or wise men of the world's first age. Even the Upaniṣads ('secret doctrines'), the spirit of which is altogether characteristic of India, lay claim to a direct connexion with the primordial wisdom of the Vedas; while the Law-book of Manu (*Mānava Dharmaśāstra*) professes to be a revelation which the first man Manu received from the Deity. The doctrine of the ages of the world (*q.v.*) given in the *Mahābhārata* and in the Law-book of Manu asserts that in the Golden Age the Veda existed in a perfect form, and that in each of the three succeeding ages one quarter of the Veda, and therewith one quarter of perfect righteousness, has been lost.

(5) *China*.—The State-religion of Confucius, as established by the Han dynasty (B.C. 206–A.D. 220) is based upon nine canonical works (five *king*, or 'webs' of wisdom, and four *shu*, 'books'), in which the primordial wisdom, from the period of the mythical emperors of the remote past, is believed to be codified. This is quite in accordance with the attitude of Kung-tse, the great reformer Confucius, who professed to be no more than 'the wooden clapper whom Heaven had made use of' to redeem the people from their degeneracy by resuscitating the institutions of ancient days.

(6) *Islām*.—In Islām, Muhammad is regarded as the 'Seal of the Prophets' (Qur'ān, xxxiii. 40), the last infallible messenger of Divine revelation. In the Muhammadan faith, therefore, the Qur'ān ranks as the book of heaven. The Mahdism prevalent among the sects looks to the coming Mahdis as prophets who will cleanse the truth of the original revelation from all error. Only in a few sects has the prophet lost the distinction of being 'the Seal of the Prophets,' and sunk to the level of a mere forerunner.

With this Oriental conception of the book of the primeval revelation of God is closely connected the tendency of the Jewish Synagogue towards the theory of the verbal inspiration of Scripture.

2. The book of destinies.—In Oriental science the analogue of the cosmos is the cycle. The conception of space is equivalent to that of time (cf. *'olām*, 'æon'; Talmudic *'olām*, 'world'). The revelation of the Deity in the cosmos and the cycle is seen in the starry sphere, and especially in the movement of the heavenly bodies. A Bab. name for these bodies is *šitir šamê*, *šitirtu šamê*, 'the writing of heaven.'

According to Seneca (*FHG* i. 510), Berosus says that in Chaldæan science 'all things take place in harmony with the movements of the stars.' Cf. Job 38[33] 'Knowest thou the *ḥuḳḳôth* of the heavens?': the parallel clause, on the principle that the earthly is a reflex of the heavenly, reads, 'Or canst thou set their dominion upon the earth?' See also Qur'ān, xlv. 1–4: 'The revelation of the *Book* is from God . . . for in the heavens and on the earth are the signs for believers. Likewise in your own nature, and in all manner of beasts in every place . . . and in the succession of night and day, and in the supplies which God sends from heaven and with which He gives life to the earth when dead, and in the change of winds'; cf. xvi. 16: 'For by the stars are they guided.' Jewish literature, *e.g.*, *Mo'ed Qāṭon*, 28*a*, has it that 'long life, children, and food depend not upon merit, but upon the stars.'

In the teaching emanating from Babylon the heavenly bodies (sun, moon, and five planets) that move in the zodiac are in a special sense the interpreters of the Divine will. The zodiac forms the book of revelation proper, while the fixed stars, grouped in constellations which are regarded as 'correspondences' to the phenomena of the zodiac, are, so to speak, the commentary on the margin.

Cf. H. Winckler, *Forschungen*, iii. 198. In Arabic the constellations lying outside the zodiac are called *bayaniyyāt*, *bayan* meaning a 'commentary' on the margin of a book. According to Qur'ān xv. 5 ff. the *mysteries of the Divine will* lie in the *zodiac*. With reference to the 'interpreters' (ἑρμηνεῖς), cf. Diodor. Sic. ii. 30, who reproduces the 'Chaldæan doctrine.' The name of the temple-tower *E-ur-imin-an-ki* would seem to signify 'House of the messengers of the commands of heaven and earth,' and in that case may apply to the planets; cf. A. Jeremias, 'Das Alter der babylonischen Astronomie' (*Im Kampf um den Alten Orient*, iii.[3]).

In the cosmic mythology of Babylon the revelation of heaven, which is made manifest in the cycle of the world, is known as *tup šimâti*, 'tables of destiny.' These are borne upon the breast of the ruler of the world's destiny. Hence we should probably assume the existence of *two* heavenly tablets; not only 'the commands of the gods,' but also 'the *life* of men' is written thereon. In the myths concerning the war against the chaos-dragon

and the restoration of the world, the victor and demiurge receives the tablets as his reward (see below, 'the book with seven seals' [Rev 4 f.], which the ἀρνίον, having won the battle, has power to open). In the Bab. Creation Epic they were, during a previous æon, in the possession of Kingu, the partner of Tiâmat. The narrative relates how Tiâmat delivers them to him with the words: 'Let not thy decree be changed; the word of the mouth stands firm.' Then Marduk receives them as the reward of conflict and victory. Elsewhere it is En-lil, the cosmic representative of the zodiac, who appears as the holder of the tablets of destiny. Or they are sometimes held by Nebo, the Divine recorder of destiny. In an exorcism-text (King, *Assyrian Magic*, No. 22) he is called 'the bearer of the tablets of fate,' and in other passages 'the writer of the All, who holds the style of the tablet of fate' (Rawl. 52). The day for the determination of destiny is New Year's Day. On this day is reconstituted the cycle of the year, which represents in miniature, as was believed, the cycle of the æons. The conqueror of the power of darkness is, as 'the one who determines destiny,' the possessor of the tablets of fate. In the *parak šimâti*, the chamber of destiny, from the 8th to the 11th of Nisan, the destinies of the year are determined with the assistance of the gods, whose statues are conveyed in wheel-barges to the sanctuary of Marduk. This mythical conception seems to have become matter of fact within historic times, in the act of casting lots by the king (the Assyrian king says: *puru akrur*, 'I cast the lot'), *i.e.* in a ceremonial inquiry regarding destiny.

The same notion survives in the practice of inquiring after one's destiny on New Year's eve, and also in that of taking the twelve holy nights (one for each month) as times for dreaming of one's destiny. The Bab. spirit of the idea is particularly preserved in the Talmudic conception (discussed in next col.) of the New Year's festival as the occasion on which the Divine determination of destiny is made.

In applying the doctrine of the celestial tablets of destiny to individuals, Bab. texts make mention of one particular tablet on which is inscribed the duration of life, the happiness of mankind (and on the other hand the curse, or shortening, of life). The construction of tablets of this kind is specially ascribed to Nabû, the Divine recorder in the chamber of destiny. Thus Ashurbanipal in a hymn (cf. Jeremias, art. 'Nebo,' in Roscher) says to Nebo: 'My life is written before thee.' His brother Šameššumukîn speaks thus: 'May Nabû, the tablet-writer of E-sagil, write upon his tablet the days of the life of him [who honours my inscription] for long duration.' Nebuchadrezzar says: 'O Nabû, declare upon thy tablet, which fixes the *pulukku* of heaven and earth, the long duration of my days; write it for my posterity.' Antiochus Soter expresses himself thus: 'O Nabû, by thine august stylus, which establishes the *pulukku* of heaven and earth, may my salvation be made sure, through thy holy decree.'

The same conception has doubtless given rise to the 'tables of good works,' in which, according to IV R, 1118*b*, entries are made; also to the 'tables of sins' mentioned in ritual texts from Babylon, which are to be 'broken in pieces'; and to 'the tables of transgressions, misdeeds, anathemas and imprecations, which are to be cast into the water' (cf. H. Zimmern, *Beiträge zur Kenntnis der bab. Religion*, pp. 23, 125). We may also mention here a table (*Cun. Texts*, xiii. 29 f.) which contains injunctions regarding sacrifice, prayer, and friendship, though it perhaps belongs rather to the group of tablets of Divine wisdom dealt with above:

'In thy learning (?) look at the table:
The fear of God brings forth grace,
Sacrifice gives increase of life
And prayer [cancels] sin.'

The idea of a celestial process of reckoning in connexion with the most important festival of the calendar, viz., New Year's Day, which, as the inception of a new cycle, exhibits the renewal of the world on a small scale, had an influence upon Jewish religion after the Exile. Thus, in the tractate *'Arākhîn*, 10, it is written:

'The ministering angels inquired thus of God, "Lord of the world, why do the Israelites, on New Year's Day and the Day of Atonement, utter no song of praise (הלל) before Thee?" God answered them, "When the king sits upon the throne and passes judgment, and the *Books of Life* and *of Death* are set open before Him, then may the Israelites feel themselves disposed to sing a song of praise before Me—at a time when it shall appear fitting for them to give themselves to repentance."'

In the New Year's tractate *Rōsh Hashshānā*, 16*a*, it is said, 'Everything is decided on New Year's day, and the judgment is sealed on the Day of atonement.' In this case the 'judgment' signifies the fortunes of the year, as the context refers, amongst other things, to the fruits of the field.

Allied with the above in idea, though of a different character, is the conception of a reckoning kept in heaven of men's good and evil deeds, and of their lot in life and death. This may have been suggested by the public lists on which the names of citizens were enrolled. But we must not summarily dismiss the theory of a link with the book of destiny, for even the drawing up of such lists was brought into connexion with New Year's Day, the feast of destiny. According to Jerus. *Rōsh Hashshānā*, Rabbi Johanan (*c.* 260 A.D.) knows of three registers—of the good, the bad, and the undecided, respectively—which are unrolled at New Year. Jubil. xxx. 20 (cf. xxx. 22) speaks thus: 'He is enrolled in the tables of heaven as a friend and a just man.' In the Book of Enoch the central figure appears as a 'heavenly recorder,' and shows to a nicety the very characteristics of the Nabû, the heavenly scribe of the Babylonians. He holds possession of the celestial tables, and reads what is written therein of the deeds of man. Cf. Enoch 47³ 104¹ 'Your names are written down before the majesty of the exalted one'; 108³ 'the Book of Life and the Books of the Saints.'* The same thought is adopted in those Christian Apocalyptic writings which have been influenced by Judaism. According to the *Apocalypse of Sophonia*, the angels sit at the gate of heaven and write the deeds of men upon the rolls of a book; while *Apocal. Pauli*, 10, says that at the evening hour in heaven all things that men have done during the day are written down by the angels.

Within the canon of Scripture we find mention of the heavenly book, as the book of destiny, in the two outstanding apocalyptic writings, viz. Daniel and Revelation. In Dn 7ᶠᶠ· the seer beholds *the books opened* before the great council in heaven presided over by the Ancient of Days. In face of the assembly is fought out the battle against the beast which utters great words—a characteristic feature of the conflict with the dragon. The warrior and victor is the heavenly man. After his victory he is brought before the Ancient of Days, 'and there was given him dominion, and glory, and a kingdom, that all peoples, nations, and languages should serve him: his dominion is an everlasting dominion, which shall not pass away, and his kingdom that which shall not be destroyed.' The conqueror receives as his reward the sovereignty of the world in the new æon, and the power of determining destiny.† Here too, therefore, the books are books of destiny.

* Again, however, in ch. 89 f., Enoch appears as the recorder of the doings of the seventy shepherds of the people; and, in the *Ascensio Jesaiae*, of the registers of the heavenly Jerusalem.

† Such is the connexion to which the present writer desires once more to draw special attention (cf. his *Der AT im Lichte des alten Orients*, on this passage). The connexion with the

This comes out still more clearly in the companion picture of Revelation, where the conflict with and the victory over the power of darkness are transferred to the historical appearance of the crucified and risen Christ. It is He who has conquered the dragon, and who therefore sways the destinies of the world, and His *parousia* will bring about the final victory over the dragon, and usher in the new and glorified era of the world.

Rev $4^{1ff.}$ introduces us once more to the council in heaven.* God sits upon the throne, and to right and left, in two semicircles, sit the twenty-four elders, in priestly robes and with crowns on their heads. He that sits on the throne holds in His hand a *book-roll* having seven (pendent) seals, which indicate the seven sections of the roll.† 'Who is worthy to open the book, and to loose the seals thereof?' This simply means: 'Who is worthy to sway the destinies?' The Christ who is to be glorified comes forward. In this vision His victory and exaltation (Mt 28^{18} 11^{27} 2^{9}) are portrayed with the imagery and colouring of the ancient Oriental myth of the conflict and victory of the year-god, who as the reward of his success receives the book of destiny, *i.e.* the command of the world, and who is therefore loudly praised in the council of heaven (for details see Jeremias, *Babylonisches im NT*, 13 ff.): 'Worthy art thou to open the book, and to loose the seals thereof.' A similar signification attaches to Rev 21^{27}, where the *Book of Life* is in the possession of the Lamb. In $5^{9f.}$ we have the song of praise sung by the heavenly council. In its form the song resembles that accorded to Marduk, who after his victory over Tiamat received fifty names of honour (cf. 'the name above every name,' Ph 2^{9}), as also that given in the Egyptian myth to Horus in the hall of the gods after his victory over Set, the representative of the power of darkness: 'Welcome, Horus, son of Osiris, the courageous, the justified, son of Isis and heir of Osiris.'

Mention of a book of destiny in which are written the fortunes of the individual is made in Ps 139^{16} 'Thine eyes saw me when I was yet unformed, and there was written in thy book all the days that were still to be'; cf. also Ex 32^{32} 'Blot me out of the book which thou hast written'; and Ps 69^{28} 'Let them be blotted out of the book of the living, that they be not written with the righteous.' The last-mentioned passage might also come under a different heading, that, namely, of the heavenly list-making already touched upon (p. 794^{b}); and it is this group to which we must refer Is 4^{3}, which speaks of those who in Jerusalem are 'written unto life,' as also Mal 3^{16} with its mention of a 'book of remembrance' before Jahweh, in which are written those that fear Jahweh and have respect to His name.

The two ideas of a heavenly book of life and a heavenly register of names find expression also in the NT. The book of life in which the destinies of men are inscribed is referred to, not only in Rev 5 and 21^{27}, as already noted, but also in Rev 13^{8} and 17^{8} 'the book of life' in which names are 'written from the foundation of the world'; cf. 3^{5} 'I will in no wise blot his name out of the book of life' (one of the seven variants of the promise given at the close of the messages to the Churches, to assure him that overcometh in the strife that he shall be saved in the transformation of the world).

The book of destinies, in miniature form, so to speak, is spoken of also in Ezk $3^{1ff.}$ and Rev $10^{8ff.}$ The two passages are essentially the same in character. Ezekiel must eat the roll of a book, and it was in his mouth as honey for sweetness. The roll contained the intimation of God's will, which the prophet is required to convey to the captives in Babylon, and the Spirit carries him thither through the air. In Rev $10^{8ff.}$ John is made to eat up the little book which the angel carried in his hand. It is to taste like honey in his mouth, but to cause pain within. In it are written the destinies 'concerning many peoples and nations and tongues and kings' which he is to proclaim.

The heavenly registers are suggested by Lk 10^{20} 'Rejoice that your names are written in heaven'; Ph 4^{3} 'the rest of my fellow-workers, whose names are in the book of life'; and He 12^{23} 'the general assembly and Church of the first-born who are enrolled in heaven.'

ALFRED JEREMIAS.

myth underlying the representation shows this quite clearly: the conqueror of the dragon receives power over the destinies and the dominion of the world.

* Cf. *Shemoth Rabbâ* on Ex 4^{28}, with a reference to Is 24^{23}: 'One day shall God assemble the elders of Israel as on a threshing-floor; He will sit at the head of them all as the president of the court, and administer justice to the peoples.'

† Cf. the seven tablets in the *Dionysiaca* of Nonnus, each of which bears the name of one of the seven planets.

BOUNDARY.—See LANDMARK.

BOURIGNIANISM.—See SECTS (Christian).

BOY.—See CHILDREN, INITIATION, PUBERTY.

BOYCOTTING.—This is a modern name for a practice as ancient as civilization itself. The name is derived from the experience of one Captain Boycott, a land agent in the employment of Lord Erne, an Irish landlord who in 1880 came into conflict with the agrarian societies in the district in which he lived, in County Mayo, Ireland. It is a method of social ostracism, informally applied by public opinion, and may be carried to almost any length. The term, which has been adopted in a wide sense into French (*boycotter*) and German (*boykottiren*), is used as implying any measure of avoidance of or holding aloof from those judged, by organized or unorganized public opinion, unworthy of social intercourse. It may vary from the schoolboy's 'sending to Coventry' to the extreme measures adopted in Ireland during the days of the land agitation. In so far as boycotting is the expression of individual aversion, the law can take no cognizance of it; but when it is decreed by an association, or organized body of men, it becomes a criminal offence under the law of conspiracy, and in Ireland has been treated as such. A boycotted person in Ireland was cut off from all intercourse with his fellows: no one could work for him, or rent land from him, or supply goods to him, associate with him, or help or assist him in any way, under penalty of being subjected to the same treatment; and this treatment was decreed for landlords and their agents who, in the opinion of the local agrarian association, had treated their tenants harshly.

The boycott, as has been said, is as ancient as civilization itself. The outcast or the outlaw from primitive social communities was simply subjected to the extreme form of boycotting, and had neither security of life nor chance of justice. *Ostracism* in the Greek world was a survival of primitive tribal law dressed up in a constitutional form. *Excommunication* by the Church in the Middle Ages, since it affected civil as well as ecclesiastical privileges, was a tremendously powerful weapon in the hands of the Church; but in modern times, with the separation of Church and State or the subordination of the Church to the State, ecclesiastical excommunication has been deprived of much of its terror, because it no longer affects civil rights. Excommunication, however, is the privilege of every society or association, which may expel or discipline those of its members it considers unworthy; and conflict with the State can arise only when civil rights are affected or the

victim is deprived of contract privileges. The State, which has uniformly set its face against all authorities which intervene between it and its subjects, has always regarded boycotting with suspicion; but in a modified form the right to boycott is inherent in the social nature of man. It is one of the forms in which public opinion expresses itself, and is liable to all the excesses and lack of uniformity to which public opinion itself is liable. Organized boycott alone is of sufficient importance to require State interference; or at least is alone sufficiently definite to permit of responsibility being brought home to individuals.

In the economic world the boycott has been extensively used by Trade Unionists (cf. the *Economic Journal*, vol. i. 'The Boycott as an Element in Trade Disputes'). When accompanied by violence, the boycott is a criminal offence at common law in the United States; and even where there is no violence or intimidation, many States hold that the boycott is criminal; and at the present time (1909) a case which will decide this question is pending in the United States Supreme Court. Efforts have been made by Consumers' Leagues in America and similar associations elsewhere to apply a partial boycott to the products of sweated industries, and to the establishments in the retail trade where the employer does not show sufficient consideration for the welfare of his hands.

JOHN DAVIDSON.

BOYS' BRIGADES.—Organizations of boys, military in form, moral in purpose. Their ultimate origin is remote. Boys have played at soldiers ever since fighting began, and have been moulded by their play. For many years, up to 1880, Mr. John Hope, an Edinburgh lawyer, carried on a corps of 'Cadets,' which regularly numbered some hundreds of boys. They had uniforms, arms, and a band. Mr. Hope's purpose was to enforce Protestant principles and abstinence from drink and tobacco, and generally to cultivate manliness. This pioneer corps deeply influenced many generations of boys.

The Boys' Brigade proper was instituted in Glasgow by Lieut.-Col. Sir W. A. Smith, of the Volunteer force there. He was a teacher in a mission school, where discipline was difficult, and hooliganism incipient. He adopted the military metaphor, as did General Booth, with some differences. In 1883 the first Company of thirty boys was formed, and drilled in martial exercises, and in the Bible. A red rosette was the first uniform, but caps, belts, haversacks, etc., were soon introduced, and dummy arms. So successful was the movement that before the end of 1908 there were, in the United Kingdom, between 1300 and 1400 such Companies, with 6,000 officers, and 60,000 boys. The world-figures, at the same time, were 2,300 Companies, including over 10,000 officers, and 100,000 boys. There are, besides, Episcopal, Roman Catholic, and Jewish adaptations of the idea, whose figures are not included here. The objects of the brigade are: 'the advancement of Christ's Kingdom among boys, and the promotion of habits of obedience, reverence, discipline, self-respect, and all that tends towards true manliness.' The Bible-class is central. Every boy must attend it, or lose membership in the Brigade. In many companies there is development in the direction of ambulance work, gymnastics, music, etc. The more fully organized corps have become many-sided Clubs for boys.

The Boy Scouts is a kindred organization. Lieut.-General Baden Powell, C.B., is its founder. Its beginning was practical, in 1889, in Mafeking, S. Africa. The town was under siege, General Baden Powell commanding the defence. That men might be released to strengthen the firing line, a corps of boys was enrolled. They kept look-out, acted as orderlies, and carried messages, often under fire. Very good reports are given of their usefulness and courage. The plan was acclimatized in Great Britain, for purposes of moral training. But it is 'peace-scouting' that is taught. Mr. E. Seton Thompson has floated successfully a similar organization in the United States, especially among the Indians. Now there may be seen in and around most towns groups of Scouts, marching, signalling, camping. Statistics are estimates; for the movement is elastic. When a 'patrol,' a squad of five or seven, is trained to efficiency, its members are encouraged to enlist patrols of their own. These are usually linked into 'troops,' but are sometimes independent. They may be connected with Churches or Boys' Brigades. The ideals held up are: 'to be loyal to God, and to the King; and to help other people at all times.' Observation of Nature, self-reliance, and chivalry are inculcated. The manual of the movement is *Scouting for Boys*, by the General. Its sub-title is 'A Handbook for Instruction in Good Citizenship,' which sufficiently describes its scope. The Scouts are put upon their honour to be clean and kind in language and in habits. Clubrooms in winter and camps in summer are used for the ends in view.

The Life Brigade is, in idea, an offshoot of the Boys' Brigade. Its aims are identical, and so are some of its modes. But it strongly opposes the militarism of the earlier body. It organizes girls as well as boys, but without the martial element. Like the other, it uses ambulance work, gymnastics, music, etc., to attach its members to itself, and for training in Christian principles and character. It thus provides bright, healthy nucleus-centres of good citizenship. It is extending, especially under those who hold strong views on the subject of peace. Its watchword is 'Life-saving.' Its president is Rev. Principal J. B. Paton, D.D., Nottingham.

The answer of the promoters of the earlier work to their critics is that the military element is formal, not essential; that there is less and less of it proportionally as the corps grow in the Club direction; and that what there is of it is 'in defence, not defiance.'

THOMAS TEMPLETON.

BRAHMĀ.—See BRĀHMANISM, p. 810.

BRAHMAN.—The philosophical system of the Vedānta adopts as its aim the search after Brahman, and makes this the central point of its teaching. The loftiest conception of Brāhman speculation is there set forth, and handed down from generation to generation. It is, however, only the climax of a long intellectual development, the beginning of which may be traced in the Rigveda, the most ancient poetry of early India. And for the religious and philosophical history of that country the word *brahman* possesses at least an equal significance with that of the term λόγος for Christianity. There is contained in it, as Roth says, the religious development of India during thirty centuries.

It is difficult to grasp the original meaning of the word; for as early as the Rigveda it appears endowed with various meanings, and cannot be identified precisely with any of our conceptions.

The Indian thought is hardly adequately expressed either in the definition of Roth, 'the devotion which manifests itself as longing and satisfaction of the soul, and reaches forth to the gods,' or in general, 'every pious utterance in the service of God'; or in that of Deussen, 'aspirations and cravings after the Divine.' It is Haug's merit to have made it clear that everything which recalls the Christian ideas of 'devotion' or 'prayer' is wholly foreign to the Indian *brahman*, and that the entire sacrificial act was no more than a kind of magic, which compelled the gods to gratify the wishes of their worshippers.

The word *brahman*, from which *brāhmaṇa* is etymologically derived, meets us as early as the time of the Rigveda. Accented on the first syllable (*bráhman*), it is neuter; oxytone, *i.e.* with an accented ultima (*brahmán*), it is masculine. The neuter denotes the object or the thing; the masculine the person who is endowed with or possesses the *bráhman*. With no little probability research inclines now to the view that the fundamental meaning of the word is neither 'devotion' nor 'prayer,' but 'magic'; and that its origin is to be sought in a primitive and rude stratum of human thought, from which it was gradually developed into an expression for the loftiest conception formulated by Hinduism. On the assumption that the word denotes 'magic,' 'witchcraft,' Osthoff has compared it, in his very able work, with the ancient Irish *bricht*, 'magic,' 'magical spell,' and has endeavoured to find the real fundamental idea in the meaning 'formula,' 'fixed mode of expression.' To these words the ancient Icelandic and ancient Norwegian *bragr*, 'poetry,' 'art of poetry,' is akin; and thus the Indian *bráhman*, or the Celtic *bricht*, may be the 'ceremonially conceived' word on which Jacob Grimm lays stress as the essential requisite of the magic, if it is to be effective.

The etymology of *brahman* is obscure. Besides the uncertain possibility of a derivation from the rare root *bṛh*, 'to speak,' earlier writers referred to the root *bṛh*, 'to grow,' from which *barhis* is taken, and thus connected *brahman* with the Iranian *baresma* (see BARSOM). But, as Osthoff shows, this combination is improbable, since words derived from the root *barh* on the European side exhibit an *l* (*e.g.* Prussian *po-balso*), and *brahman*, if derived from *barh*, could not be related to *bragr*.

Haug has collected the numerous explanations of Sāyaṇa. The latter interprets *brahman* as meaning: (*a*) food, food-offering; (*b*) the chant of the Sâma singer; (*c*) magical formula or text, mantra; (*d*) duly completed ceremonies; (*e*) the chant and sacrificial gift together; (*f*) the recitation of the *hotṛ* priest; (*g*) great. The first of these interpretations is not confirmed by the numerous verses of the Rigveda in which *bráhman* occurs, and must be abandoned as erroneous; while in favour of the others various arguments may be advanced.

As early as the Rigveda, *bráhman* appears not as a possession common to all men, but as the religious property of a narrow circle. It is still far from being exalted to a position of superiority over gods and priests. Rather it is to gods,* and to the chanters and *ṛṣis* of the ritual† that it owes its rise. It is 'new,' had 'hitherto not yet' existed, or comes into being from the fathers. It originates from the seat of the *ṛta*,‡ springs forth at the sound of the music of the sacrifice,§ begins really to exist when the Soma juice is pressed and the hymns are recited,‖ at the *savana* rite at the sacrifice, bearing the name *kṛta-brahman*,* and endures with the help of the gods even in battle;† Soma is its guardian.‡ Haug is therefore justified in his conjecture that 'in the Rigveda it denotes a mysterious power which can be called forth by various ceremonies,' and in the definition which he gives of it as 'the magical force which is derived from the orderly co-operation of the hymns, the chants, and the sacrificial gifts.' The pious *brahmakṛt* is contrasted with the *brahmadviṣ*, who has only blame for the performance of the *brahman*.§ It is a purely spiritual force, as may be inferred also from such verses as Rigv. viii. 3. 9: *tat tvā yāmi suvīryaṁ tad brahma pūrvachittaye*, 'I entreat thee for that power, for that brahman, in order that thereby I may discern beforehand'; ii. 2. 10: *brahmaṇā vā chitayemā janāñ ati*, 34. 7; vi. 75. 19, etc. It is exalted over *vāch*, 'speech,' which reaches as far as the *bráhman*.‖

It is altogether probable that in many individual instances *bráhman* denotes the hymns, religious formulæ, or chants themselves, which are the source of this magical power. But the present writer has found it impossible to establish this meaning with certainty in the particular verses. The verbs which are associated with the word *bráhman* are numerous: *arch*, 'to praise'; *īr*, 'to incite,' 'raise'; *takṣ*, 'to cut'; *kṛ*, 'to make'; *jinv*, 'to incite'; *pra bhar*, 'to deliver'; *ud yam*, 'to raise'; *yuj*, 'to yoke'; *śaṁs*, 'to recite'; *stu*, 'to praise'; *hu*, 'to sacrifice.' These describe the activity of *different* priests; while on the other hand *bráhman* in many instances is co-ordinated with *uktha*, *gir*, *dhī*, *mati*, *manman*, *stoma*, and other words. It is said in Rigv. vii. 43. 1, that 'the unequal *bráhmāni* of the pious spread abroad on all sides at the sacrifice like the branches of a tree.'

But even if *bráhman* should be found to be a frequent synonym for hymn, formula, and other products of the mental life, its application is from early times not limited to these. The Taittirīya Saṁhitā says that the hymns and the texts are limited, but the *bráhman* has no limits;¶ and it is therefore intelligible how, as early as the Upaniṣads, the word assumes a profound philosophical meaning in direct opposition to the purely liturgical part of Brāhmanism. *The bráhman frees itself* again from the mere externalities of the ritual, which have gradually gathered around the centre of magical power, and, released from all these fetters of the sacrifice, is developed into the loftiest conception of Hinduism, the central point of all thought, into *the* Brahman, which is essentially pure, unchangeable, and eternal, and in which all things have their issue and their end.

Vedic times conceived of a 'lord of *bráhman*,' the god *Bṛhaspati* or *Brahmaṇaspati*. In opposition to the older view, which saw in the latter a form of Agni, modern authorities, following Roth and Haug, prefer to regard him as a pure abstraction. In Haug's belief, Bṛhaspati is a 'paramount priest of the Brāhman theology'; Oldenberg describes him as 'the domestic priest (*purohita*) of the gods, the heavenly personification of the priesthood, in so far as the latter has the power and function of influencing the course of events by prayer and magical incantation.'** Pischel, again, has placed him by the side of Indra, who has in him his *purohita*, as in ancient India the earthly king had by his side his *brahmán-purohita*, the domestic priest skilled in magical art.†† These views, so far as they are based upon a pure abstraction, are

mistaken, inasmuch as they are opposed to an important passage of the Rigveda, — *bṛhaspatiṁ sadane sādayadhvaṁ . . . dama ā dīdivāṁsaṁ hiraṇyavarṇaṁ sapema*,*—which treats unmistakably of the establishment of a sacrificial fire on the hearth; and in the light of this passage, which in itself is entirely unexceptionable, and cannot be regarded as late, the question whether Bṛhaspati in the Rigveda is an abstraction or not must be answered in the negative. If Bṛhaspati is a name for the fire, the reference in every case into which magic enters can only be to the ancestral fire on the south of the place of sacrifice where the Brahmán sits. Sometimes, it is true, Indra and Bṛhaspati are brought into close connexion, the former as the king the latter as his *purohita*, but the inference is clearly that we are as little compelled to regard Bṛhaspati as an abstraction as Indra. Indra-Sūrya corresponds to the Kṣatra, the moon to the Brāhman. It is asserted in Rigv. x. 90. 13 that 'the moon is born from the *manas*,' and statements to the same effect are found in the Aitareya and Bṛhadāraṇyaka Upaniṣads.† We meet with the comparison in Dhammapada, No. 387, where *ādicco* corresponds to the *saṁnaddho khattiyo*, and *candimā* to the *jhāyī brāhmaṇo*, and similarly in Raghuvaṁśa, xi. 64. When, therefore, ethnography points to 'the dread wizard moon, pursuing its work in the darkness, continually changing its aspect,'‡ it is quite natural for the southern fire, which witnesses magical art and is usually represented as a half-moon, to receive the name of Bṛhaspati, and for the moon also as lord and divine patron of all magic. Haug's view that Bṛhaspati was 'a precursor of the god Gaṇeśa' cannot be established. In later times Bṛhaspati lost his original significance and became a name of the planet Juppiter, just as the name of the Aśvins, when their original meaning was forgotten, was transferred to a constellation.

Bṛhaspati is the heavenly *brahmán*, the prototype of the earthly. He arouses the gods by means of the sacrifice, and, according to one passage of the Śatapatha Brāhmaṇa, bears the sacrifice to men who had become faithless. An examination of all the passages in which the masculine *brahmán* is found shows that it denotes in general a distinct class, if not a caste, with their dependents, and is frequently used in direct contrast with the king. And the masculine also, like the neuter *bráhman*, is brought into close connexion with *vāch*.§ As early as the Rigveda those who undertake one or other of the priestly offices are termed Brāhmans, and only in a few instances are we to understand by *brahmán* a definite *class* of priests, co-ordinated with the hotṛ, adhvaryu, or udgātṛ.‖ In one passage only, where Agni is addressed as Brahman, who takes his seat on the seat of men, does the latter appear to rank higher than the hotṛ.¶ With these exceptions, however, no special statement is found in the Rigveda which would assign to the *brahmán* duties distinct from those of the hotṛ or adhvaryu. We read nothing either of a special priest of magic or of the *brahmán* of the later ritual, whose function it was to apply his superior knowledge to the superintendence of the sacrifice as a whole, and to make atonement for the mistakes of the individual priests. Thrice the word *vad* is used of his action. But just as the general practice of magic is older than the particular forms of sacrifice known to us, so the magician also is older than the other officials of the Indian ritual, which was raised above the sphere of ordinary magic without ever losing its association with it. There is no ground for supposing that the *brahmán* named in the few passages referred to, and co-ordinated with the hotṛ, adhvaryu, etc., is other than the precursor of the *brahmán* of later times. 'There is no doubt,' writes V. Henry (*La Magie*, p. 37), 'that the earliest brahma of India was nothing more than the sorcerer and medicine-man, the retailer of the remedies and charms of the Atharvaveda or Brahmaveda.' Here again, also, the conservative character of Indian development shows itself: it does not break with the past, but retains it even under changed conditions. Although the hotṛ, adhvaryu, and udgātṛ, with their higher literary or musical accomplishments, were placed in the forefront, and the artificial and dramatic routine of the sacrifice overshadowed the primitive magical rules of the *brahmán*, the ancient *pūjārī* of India was nevertheless not banished from the sacrificial ground, but retained his place as 'physician of the sacrifice,'* lingering in the neighbourhood in order to make good all its defects by virtue of his secret magical art. His mere presence, more than the hymns of the hotṛ or the chants of the udgātṛ, by means of the magical fluid with which he is endowed, preserves for the sacred rite the character of mystery, and maintains the sacrifice in effective order.

A later age credited him also with wider literary knowledge. There was provided for him a special book of ritual, and the Atharvaveda, the magical practices of which harmonized closely with his character, was devoted especially to him. It was even required that he should be acquainted with all the Vedas.† His position, moreover, south of the place of sacrifice,‡ near to the southern fire which was dedicated to the fathers and the demons and employed for magical practices, is a further indication of the original character of the pūjārī; and it was only gradually that there came to be assigned to him a higher literary rank.

All members of the Brāhman caste, according to their qualifications, were, as it seems, eligible to undertake the duties of a hotṛ, udgātṛ, adhvaryu, brahman, or purohita. Apparently, however, one or the other office was held by preference by certain families. We know that the office of the brahman was claimed in the most ancient times by the Vasiṣṭhas, and later by the Atharvans. It is said in the Śatapatha Brāhmaṇa, xii. 6. 1. 41, and Taitt. Saṁh. iii. 5. 2. 1 ff., that the Vasiṣṭhas were originally in sole possession of certain formulæ which were essential for the performance of the duty.§ It is worthy of notice that to the god Varuṇa, who is closely associated with the bráhman,‖ more numerous hymns are dedicated by the Vasiṣṭhas in their maṇḍala than by other poets. The pre-eminent efficiency of their bráhman is emphasized by the hymn Rigv. vii. 34, while in iii. 53. 12 the Viśvāmitras praise their bráhman as protecting the Bharatas. Bloomfield has attempted to show how the Atharvans came to put forward their especial claim to the office.¶

We recur now to the abstract form of the word. The attempt to find a unity behind the multiplicity of the Vedic gods, to discover an all-comprehending first principle, makes its appearance as early as the hymns of the Rigveda, and is there linked with the names of Prajāpati, Viśvakarman, and Puruṣa. It is first in the Śatapatha

Brāhmaṇa that we find the neuter bráhman exalted to the position of the supreme principle which is the moving force behind the gods. 'The thirty-three gods,' it is said in Śatap. Brāhm. xii. 8. 3. 29, 'have Bṛhaspati as Purohita, but Bṛhaspati is Brahman, therefore the meaning is, They have the Brahman as their Purohita.' Brahman is identified at one time with the wind, at another with the prāṇas (see BREATH), and at another with the sun. In a hymn, which has been preserved only in fragments, the epithet of 'born first in the east' is applied to him, and he is described at its close as creator and first principle of the universe, who brings the gods and the universe into being. Here, however, he is only the firstborn of creatures (*prathamaja*), not yet 'self-existent' (*svayambhu*). We recognize still the connexion with the view of the Rigveda in passages like Śatap. Brāhm. x. 2. 4. 6, which represents yonder sun as resting upon the seven-syllabled Brahman, and adds: 'the Brahman is seven-syllabled, ṛc is one syllable, yajus two syllables, sāman two syllables, and what is left over and above subsisting in Brahman that is two-syllabled; therefore this is the entire seven-syllabled Brahman.' And in another passage Brahman is identified with the syllable *om*, which is the essence of the whole Veda. In some parts of the Brāhmaṇa literature we still see clearly, as Deussen shows, Prajāpati holding a position above the Brahman of which he is creator, while in others Prajāpati, as 'Brahma Svayambhu,' creates this universe, and in a third series the mind (*manas*) which creates Prajāpati originates 'from the non-existent,' and is itself identified with Brahman. In the cosmogony of the later books of the Śatap. Brāhm., Brahman has been exalted to the position of the supreme first principle, which, itself without beginning, creates the universe: 'Brahman in truth was this universe at the beginning; it created these gods.'*

This thought was taken up by the Upaniṣads, which made it their aim to search out the Brahman, and to impart the knowledge of it. Here religion passes into the wide arena of that philosophy which, in the Vedānta system devoted to the *Brahmavidyā*, has consistently and fully expounded the doctrine of Brahman, and has taught the unity of Brahman and the universe.

By the side of the all-comprehending Brahman, which in its philosophically refined and abstract form became the central point of Indian thought, later times conceived of a personal Divine creator Brahmā. At the present day he appears to be a god of very secondary or theoretical importance, and plays no part in the popular life. Crooke points out that only one temple, that in Puṣkara, is sacred to him. His image has four faces,† and he holds a drinking-vessel in his hand; he is usually represented also with four arms. His wife is Sarasvatī, a logical result of the ancient connexion of *bráhman* and *vāch*. But though his personality is now obscured behind the more vividly conceived Viṣṇu and Śiva, the form of Brahmā is of great antiquity. Belief in him pervades the entire Mahābhārata, as Holtzmann shows, in its later as well as in its earlier portions. Brahmā is omniscient; he is acquainted with the past, present, and future, and with his counsel supports the gods, who turn to him in perplexity. He is creator, sustainer, and destroyer of the universe, which is by him continually produced anew. From him proceed the castes, the regular orders; and he is usually exalted above the gods, although there are not wanting passages which subordinate him to Viṣṇu or Śiva. He is a popular figure also in the Pāli texts. He appears, for example, before the Buddha in order to move him not to withhold from the world the knowledge he has won. He accompanies the latter's entrance into Nirvāṇa with moral reflexions, and occupies the position of a ministering attendant who, for example, holds the white sunshade over the Buddha. We meet, however, not seldom with more serious traits, which afford evident proof of his connexion with the conception of the Brāhmans. The history of this connexion has not hitherto been investigated; and little therefore on the subject can here be advanced. In the Kevaddhasutta of the Dīgha Nikāya,‡ Brahmā is referred to as 'the great Brahman, the unsurpassed, the observer of all things, the lord of all, the father of all beings past and future,' etc., and he is described as the one who can answer the question as to the ultimate fate of the four elements. Brahmā draws near, and a bright light goes before him, announcing his approach. He is, however, obliged to explain to Kevaddha that the gods are mistaken in regarding him as omniscient, and that only the Buddha can answer that question. Here Buddhist assumptions necessitate his subordination to the Tathāgata; but in other passages, as in the Brahmajāla-sutta,* this subordination is not apparent, but the relation of the *nicco dhuvo sassato avipariṇāmadhammo brahmā* to the Brāhmanical conception is still more immediate. It would be worth while to examine these relations more closely, and to endeavour from the elaborate creations of Buddhism, with its numerous Brahma heavens and Brahma gods, to extract the ancient kernel which its wealth of fancy has thus luxuriantly overlaid and concealed from view.

A. HILLEBRANDT.

BRĀHMANISM.—I. *DEFINITION AND DIVISIONS.*—The word 'Brāhmanism' seems originally to have been used, and popularly still to be understood, to denote the religion of those inhabitants of India who adored Brahmā as their Supreme God, in contradistinction to those who professed Buddhism, and, in more recent times, Muhammadanism. But this is founded upon a misconception. Brahmā was never universally worshipped (cf. preceding col.); and his acknowledgment as the supreme God is not even a true, still less a prominent, characteristic of Brāhmanical religions and sects. The characteristic mark of Brāhmanism is the acknowledgment of the Veda as the Divine revelation.

In Brāhmanism thus defined we may distinguish two forms of religious development. The earlier one is the religion taught in the *Brāhmaṇas* (the ritualistic books forming the greater part of Vedic literature); it is, strictly speaking, a part of Vedic religion. The later forms of Brāhmanism are a new departure, and are only to a small extent developed from the religion of the *Brāhmaṇas*; they appeal to the Vedic Scriptures, more especially the *Upaniṣads* (perhaps even forging new ones), in order to build up a theosophy of their own, while in their cult they worship partly Vedic deities,—changed, however, in character,—partly deities of post-Vedic origin or growth. In these forms of Brāhmanism there is an important non-Vedic element, which, however, cannot be said to be non-Brāhmanical; for the beliefs and practices of which this new religion is made up were shared by Brāhmans and, to some extent at least, modelled by them. This element may be called 'Hinduistic.' When it became all-important, and when the influence of the Brāhmans on its formation grew less and less, Brāhmanism merged into Hinduism—by which term it has become customary to denote the modern phase of the religious development of India.

The religion of the *Brāhmaṇas* is but a continuation of that of the *Yajurveda Saṁhitā*, and thus comes under the head of Vedic religion (*q.v.*). We must take cognizance of it here, in so far as it influenced the growth and development of later

* Digh. Nik. i. 2. 3, p. 18.

Brāhmanism. The *Brāhmaṇas* are almost entirely concerned with sacrifice. Indeed, the most orthodox school of Vedic theologians, the Mīmāṁsakas, go the length of maintaining that the sole aim of revelation is to teach the doctrine of sacrifice (*karman*). The Mīmāṁsakas are the representatives of the *Karma-mārga* ('way of works'), the doctrine which declares that the highest end of man is to be realized by works, *i.e.* by sacrifices and other observances taught in the Veda. Theirs is an extreme view which, however, fairly well presents the meaning of the *Brāhmaṇas* themselves, or, to be more accurate, of the greater part of every *Brāhmaṇa*. But this does not apply to the last chapters of, or appendixes to, some *Brāhmaṇas* called *Āraṇyakas*, or to certain independent treatises with similar contents, called *Upaniṣads*, which are the latest works of Vedic literature. For these texts contain philosophical speculations which for the most part are entirely unconnected with sacrifice; and on these texts another school of Vedic theologians, the Vedāntins, have based their theosophical systems. The Vedāntins are the oldest representatives of the *Jñāna-mārga* ('way of knowledge'), or the doctrine which declares that the *summum bonum* is to be obtained through knowledge. There is a third 'way,' the *Bhakti-mārga* (*q.v.*), which declares that love of, or devotion to, God leads to the highest goal. This doctrine was developed later than the 'way of works' and the 'way of knowledge,' but it became the most important one for practical religion, especially in more recent times.

The Hindus themselves have divided their religions into these three classes, according to the three 'ways' explained above; it is therefore necessary that we too should take cognizance of their classification, which, on the whole, well presents the facts and the historical development of religious thought in India.

II. *RELIGIOUS AND PHILOSOPHICAL IDEAS.*—
1. The first form of Brāhmanism, as already stated, is mainly a religion of ceremonies and observances; it is chiefly concerned with sacrifice, compared with which devotion and moral duties are of so little importance to the authors of the ritualistic books that they scarcely ever mention them. Of course, the religion of the priests belonged, strictly speaking, to that exclusive class only; it was not the religion of the people at large, or even that of the upper classes, though it was admitted by the latter, in theory at least (and is so generally down to recent times), to be the most sacred, the revealed religion. Its influence on the religious development in India should not be underrated; in order rightly to understand the latter, we must have a clear notion of the nature of the Vedic sacrifice. It is not offered to a god with the view of propitiating him or obtaining from him welfare on earth or bliss in heaven; these rewards are directly produced by the sacrifice itself, *i.e.* through the correct performance of complicated and interconnected ceremonies which constitute the sacrifice, and which are more of the nature of magic than of worship. Though in each sacrifice certain gods are invoked and receive offerings, the gods themselves are but instrumental in bringing about the sacrifice or in completing the course of mystical ceremonies composing it. Sacrifice is regarded as possessing a mystical potency, superior even to the gods, who, it is sometimes stated, attained to their Divine rank by means of sacrifice. In the *Brāhmaṇas* there are scattered many statements about this mystical potency—sacrifice in the abstract. The general notions contained in them have been combined by Martin Haug in a description of sacrifice which we shall transcribe from the introduction to his edition of the *Aitareya Brāhmaṇa* (Bombay, 1863), p. 73 f.:

'The sacrifice is regarded as the means for obtaining power over this and the other world, over visible as well as invisible beings, animate as well as inanimate creatures. He who knows its proper application, and has it duly performed, is in fact looked upon as the real master of the world; for any desire he may entertain, if it be even the most ambitious, can be gratified; any object he has in view can be obtained by means of it. The *yajña* (sacrifice) taken as a whole is conceived to be a kind of machinery, in which every piece must tally with the other, or a sort of great chain, in which no link is allowed to be wanting; or a staircase, by which one may ascend to heaven; or as a personage, endowed with all the characteristics of a human body. It exists from eternity, and proceeded from the Supreme Being (Prajāpati or Brahmā) along with the *Traividyā*, i.e. the three-fold sacred science (the *Rik* verses, the *Sāmans*, or chants, and the *Yajus*, or sacrificial formulas). The creation of the world itself was even regarded as the fruit of a sacrifice performed by the Supreme Being. The *Yajña* exists as an invisible thing at all times; it is like the latent power of electricity in an electric machine, requiring only the operation of a suitable apparatus in order to be elicited. It is supposed to extend, when unrolled, from the *Ahavanīya*, or sacrificial fire, into which all oblations are thrown, to heaven, forming thus a bridge or ladder, by means of which the sacrificer can communicate with the world of gods and spirits, and even ascend when alive to their abodes. The term for beginning the sacrificial operations is "to spread the sacrifice"; this means that the invisible thing, representing the ideal sacrifice which was lying dormant, as it were, is set in motion, in consequence of which its several parts or limbs unfold themselves, and thus the whole becomes extended. This ideal sacrifice stands in the closest relationship with all the sacrificial implements, the sacrificial place, and all the sacred verses and words spoken during its actual performance. The sacrifice being often represented as a kind of being with a body like that of men, certain ceremonies form his head, others his neck, others his eyes, etc. The most important element in a sacrifice is that all its several parts should tally, and that consequently there should be nothing in excess, and nothing deficient in it. This harmony of the several parts of the sacrifice constitutes its *rūpa*, i.e. form. The proper form is obtained, when the *mantras* which are repeated are in strictest accordance with the ceremony for which they are repeated, or (if the sacrifice lasts for several or many days) when they have the characteristics of the respective days. If the form be vitiated, the whole sacrifice is lost. Mistakes being unavoidable on account of the extremely complicated ritual, the sacrificer was to be attended by a physician in the person of the Brahma priest. Each mistake must be made good by a *prāyaśchitta*, i.e. penance, or propitiatory offering.'

It is obvious that the dignity of the gods could not but be lowered in the opinion of those who had such exaggerated notions about the nature and importance of sacrifice. And, as a matter of fact, the gods descended from the high position they once had held in the esteem of the Vedic poets, and came to occupy quite a subordinate rank. The degradation of the once popular gods is a marked feature of later Brāhmanism, and we can trace its effect on the development of Indian religion in many important facts, as will be explained in the sequel.

The religion of the period of the Rigveda did not lack germs which, duly developed, would have raised the conception of the Deity to a higher level. Not only, during its last stage, had a Father-god, Prajāpati, become the object of speculation and adoration, but even before that time it had become a habit of the poet-priest to ascribe the attributes, functions, and powers of several gods to that particular one whom he was for the time invoking. This tendency to identify many gods with one has been called by Max Müller 'henotheism' or 'kathenotheism.' It is conceivable that henotheism might, in the end, have led to monotheism, or at least to a purer form of religion than the old Vedic polytheism. But in the *Brāhmaṇa* period the priests cared less to exalt the personal gods than to emphasize the momentous dignity of the impersonal sacrifice. The conception of the Deity as embodied in the Vedic gods was first debased by the ritualistic preoccupation of the priests; and the degradation of the gods was consummated by the superstition of the vulgar. But the same cause which diminished the dignity of the ancient gods gave rise to a new idea of God as Controller and Lord of man and the universe. The constant occupation of the priests with sacrifice and the symbolical interpretation of the meaning of the rites and ceremonies produced those ideas,

described by Haug, about sacrifice as a paramount power, the essence, as it were, of the whole world; and such ideas prepared the Indian mind to admit a First Cause, a kind of impersonal God. This movement appears in full vigour in the *Āraṇyakas* and *Upaniṣads*; in these works we behold a spectacle unique in the history of religion, viz. the search for a Supreme God after the popular gods had proved to be false.

During the *Brāhmaṇa* period the theologians had always been searching for those cosmical, physical, and psychical phenomena and forces which, as they thought, were symbolized in the rites and appurtenances of sacrifice. Thus they arrived at a crude and unsystematical knowledge of these potencies, and a rough kind of estimate of their importance. The earliest parts of the *Āraṇyakas* and *Upaniṣads* contain several attempts at a systematic arrangement of the physical and psychical forces, first in connexion with some part of the ritual, and then in various other allegorical directions. There is a gradual advance in these fanciful attempts at classification; the several items are arranged according to their dependence upon one another, till that one is reached from which all others are believed to be derived.

It is impossible to sketch, even in outline, these attempts, which frequently contradict one another; but it may be remarked that the series of cosmical or physical phenomena and the psychical are often treated apart, and afterwards placed in parallelism. Thus we frequently meet with such symbolic equations as the following: body=earth, speech=fire (*agni*), eye=sun (*āditya*), breath (*i.e.* the principle of life, *prāṇa*)=wind (*vāyu*), ear=quarters of the heavens, mind=moon, etc. At the head of either series is placed that element or power which is regarded as the most subtle, the most sublime. Before the end of these speculations was definitely reached, 'breath' was usually placed at the top of the psychical series, while the same position in the cosmical series was occupied sometimes by 'wind,' sometimes by 'space.'

2. But speculation did not rest satisfied with such results; it postulated something more subtle still than anything we are cognizant of—the Real (*sat*), the Immortal, which is beyond the sun, where the Blessed go who no more return to the earth. The name given to this mysterious power is Brahman (*q.v.*), which originally may have meant 'prayer' [but see above, p. 797[a], near top], but already in the Atharva Veda and other Vedic texts (see Muir, *Original Sanskrit Texts*, iii. 378 ff.) it denotes the primitive deity, who is identified with the Supreme God, the Upholder of the world. Brahman is the infinite, the unchangeable, the eternal, the absolute; it is pure Being, on which all that exists depends, and from which it derives its reality. Brahman cannot be defined; it is expressly and repeatedly stated that all known attributes of things must be denied of Brahman, which therefore can be described only by negations (*neti neti*, 'no no'). In Brahman is reached the ultimate end of the series of cosmical and physical powers—its First Cause.

This advance in speculation seems to have proceeded step by step with another, concerning the series of psychical phenomena and powers, the ultimate member of which came to be designated as Ātman (*q.v.*). *Ātman* originally meant 'body' or 'person.' Being used also as a reflexive pronoun, it came to denote the Self, as the principle which constitutes the identity of an individual, that on which the whole of the physical and psychical functions of an individual depend, and from which they derive their reality. *Ātman* is therefore the transcendent Self or Soul. Frequently it is identified with the space within the heart. *Brahman* and *Ātman* mark the greatest heights which speculation reached; the one in the cosmical order of things, the other in the psychical. To comprehend their nature, and to investigate the relation subsisting between them, is the chief object, the ever-recurring theme, of the fully developed speculation of the *Upaniṣads*. Brahman is declared to be the innermost essence of all things, animate and inanimate; it abides in them unknown to them, and controls them from within; hence it is called *antaryāmin* ('controller from within'). Brahman, as immanent in us, is declared not to be different from our *ātman*. The *Upaniṣads* insist on the non-difference of the Brahman and Ātman; but it may be doubted whether thereby absolute identity is meant, so that the *ātman* would cease to exist individually when it has been joined to Brahman. On this point there is great diversity of opinion among the interpreters of the *Upaniṣads*—the Aupaniṣadas or Vedāntins.

These philosophers endeavoured to deduce from the *Upaniṣads* their true teachings, and to show that they formed a self-consistent system. The older view seems to have been that followed by Rāmānuja, viz., that souls, though essentially one with Brahman, still retain some kind of individuality of their own when joined to him, and that the world has the same relation to Brahman as the soul has to the body. The younger view expounded by Śaṅkara has, however, become the prevailing one among philosophers; it maintains that Brahman alone is real and everything else is an illusion (*māyā*), and that the souls on reaching Brahman are completely merged in him and cease to exist individually. The advocates of both views adduce passages in their favour from the *Upaniṣads* themselves. The truth seems to be that the authors of the *Upaniṣads* held various opinions on the points which form the basis of the different schools of Vedānta.

However this may be, the great achievement of the *Upaniṣads* is to have established the firm belief in a transcendent Cause of the world, an impersonal and un-moral God mysteriously identical with our Self. This new idea of a pantheistical Deity has nothing in common with, and cannot therefore have been developed from, the popular notions of the Divine nature as represented by the old Vedic gods. Brahman, in particular, is outside the category of good and bad; it is an unmoral deity as it is an impersonal one.

The theosophical movement, which found expression in the *Upaniṣads*, was not restricted to a school of philosophers, though one great sage, Yājñavalkya, had a great share in establishing the final doctrine of Brahman. Nor were these speculations the exclusive property of priests or Brāhmans; for kings are mentioned who 'knew the Brahman' and taught their knowledge to Brāhmans; and even women took part in the discussions about the nature of Brahman. It cannot be doubted that the ideas of Brahman and Ātman formed the principal interest of intellectual and religious life in India during the period of the *Upaniṣads*; they became one of the chief factors which brought about the new phase of Brāhmanical religion, for 'Brahmaism,' if we may adopt this term to denote the theosophical ideas taught in the *Upaniṣads*, has been made, by most founders of sects and religions in India, the philosophical basis of their teachings.

3. Another factor which greatly influenced religious life in India, and contributed in a high degree to give it its peculiar character, was asceticism (*q.v.*). The religion of the priests, being concerned chiefly with sacrifice and sacraments, cannot have satisfied the religious wants of the people, especially of men of strong religious feelings, who have always formed a numerous class in India. In sacrifice, hired priests played the active part, and the sacrificer but a passive one; but a religious man will always desire to exert himself for the attainment of perfection according to the light that is given him. There was a way open, a means of satisfying religious wants, known by the name of *tapas* and practised from time immemorial; for ascetic practices form already an important part of primitive religion, and are imposed as a duty on the shamans and medicine-men of uncivilized peoples. Already in the Rig Veda (x. 136) ascetics (*munis*) are mentioned who boast of their magical powers. And later, in the *Brāhmaṇas*, we meet with them under the name of *śramaṇas*, who are mentioned in conjunction with Brāhmans as their rivals (cf. Patañjali, *ad Pāṇini*, ii. 412. 2). We get a distinct view of these ascetics in much later times, when the ascetic practices had been refined and reduced to a kind of system. The principal methods were the following: silence, various postures of the body and of the limbs, fasting,

regulation of the breathing, self-mortification, and contemplation. By such means, which are denoted by the word *yoga* (*q.v.*), the ascetic (or *yogin*) strove to propitiate a god and to induce him to grant the boon he solicited (*varada*), or he attempted to gain superhuman powers. At all events he acquired merit by his *tapas*, and was looked upon by all as a saint. It deserves to be noted that in the Epics the *Ṛṣis* of old are generally regarded as holy men, not so much on account of their offering sacrifices as on account of their severe penance; they are superhuman *yogins*, not deified priests. We see thereby that the religious ideal of the Epics was no longer that of the *Brāhmaṇas*.

This change will also become evident, if we consider the four *āśramas* (*q.v.*), or stages into which the religious career of the Hindus was divided about the end of the Vedic period. The first stage is that of the *brahmachārin*, or disciple, who learns the Veda; the second, that of the *gṛhastha*, or married householder; the third, that of the *vānaprastha*, or old man, who retires to the woods and lives there the life of a hermit; the last, that of the *bhikṣu* (*yati*, *sannyāsin*), or religious mendicant. Now the *bhikṣu* is an ascetic by profession, who is never to return to common life, but most of his ascetic practices he has in common with the *yogin*. The high value set on asceticism is acknowledged in principle when ascetic life is made the last stage of the religious career. During the period of the *Brāhmaṇas*, 'religious' men seem to have passed the last part of their life as hermits in the woods; for their use were destined, as the name indicates, the *Āraṇyakas* (*q.v.*), which formed the last chapters of, or were appendixes to, the *Brāhmaṇas*. In later times, however, the *āśrama* of the hermit fell into disuse, and now it is practically abolished; while at the same time the *āśrama* of the ascetic gained in importance, and was chosen by all those who adopted a religious life. This changed relation between the *āśramas* indicates that the ascetic ideal finally supplanted the older ideal represented by sacrifice.

There have always been two kinds of *yoga*. The one, now called *haṭhayoga*, is practised in order to obtain magical powers; the other, *rājayoga*, for the attainment of spiritual perfection. In the latter, the higher *yoga*, *dhyāna* ('contemplation') is regarded as the most effective means for attaining the desired ends, while the other ascetic practices are enjoined as a preparatory course only. By *dhyāna* is produced a kind of superhuman knowledge, intuition, we may call it, on the strength of which the wildest fancies have been accepted as truths. The Jaina Umāsvāti lays it down in his *Tattvārthādhigama Sūtra*, ix. 37, that by means of *dhyāna* the structure of the universe becomes known. But the chief use to which *dhyāna* was put was the discovery and comprehension of religious truths, and it is therefore regarded by orthodox as well as by heretical teachers as the noblest of all religious exercises.

The refined *yoga* gave rise to the first systematical philosophy, the *Sāṅkhya* of Kapila—a theory, if not invented for the purpose, at least well adapted to account for the efficacy of *yoga* in general, and of contemplation in particular. We might call it a system of natural religion; for it was regarded as a *Smṛti*—a title which is given to works of an authority inferior only to that of the Veda. Hence the *Sāṅkhya* theory of evolution, combined with the doctrine of the *Upaniṣads* on Brahman, has, ever since the *Mahābhārata* and the *Purāṇas*, been put in requisition to solve religious problems and to explain the relation between God and the world; it has thus exercised the greatest influence on later Brāhmanical theology.

In conclusion, the bearing of asceticism on ethics must be pointed out. In India, ethics is not regarded as an independent branch of philosophy or of religion, but as preparatory to the exercise of the highest religious practice, *dhyāna*, which leads to emancipation. It is therefore not to be wondered at that the fundamental moral precepts should have first been formulated in ascetic circles; for they are set forth as the five great vows binding on all *bhikṣus*. Four of these five vows, viz., not to kill, not to steal, not to lie, and not to commit adultery, are common to all orders of ascetics, orthodox as well as heretical. Whatever may have been the actual state of morality in India at the time under consideration, it is evident that the principal moral laws had been clearly grasped, notwithstanding the indifference of the priests to ethics.

The *summum bonum* is defined as emancipation (*mokṣa*, *mukti*, *nirvṛti*). In the *Upaniṣads*, emancipation, union with Brahman, is frequently mentioned and praised as the end to be desired; but it does not yet appear in the same light as in later times, as the only real good. In the *Upaniṣads* there is scarcely a trace of that pessimism which henceforward becomes the most characteristic and dominant feature of Indian philosophy and religion. Theoretical pessimism was first taught in Brāhmanical philosophy by Sāṅkhya-Yoga; it is also the keynote of Jainism and Buddhism—religions which have largely borrowed from Yoga. The logical outcome of pessimism, always associated with it, is the doctrine of liberation as the *summum bonum*. If mundane existence, this phenomenal world, the Saṁsāra, in which the soul is born again and again, is essentially bad, and if the soul fettered to the Saṁsāra experiences infinite pain and no happiness that is not vitiated with and inseparable from suffering, then indeed the true aim must be the definite release from the Saṁsāra, *i.e.* the reaching of a state subject to no change and suffering. This absolute state is reached in *mokṣa*, *mukti*, *nirvṛti*, or *nirvāṇa*. To teach the way to *mukti* is the aim of most of the philosophical and religious systems of India after the Vedic period; they profess to open a way to salvation for those who are wearied with the continual suffering produced by mundane existence.

III. *MYTHOLOGY*.—The religious and philosophical ideas, the rise of which has been sketched in the preceding part of this article, were at the same time so many factors in the forming of the mythology of the Brāhmanical period. This mythology is not the exclusive property of the priests or of the Brāhmans; it may be described as the sum of those myths and legends which were current among the Indians of higher culture, and which found expression in general Sanskrit literature, chiefly in the Epics and the *Purāṇas*. It inherited, from the preceding period of the Veda, the principal gods. Theoretically they remained what they had been believed to be before, but practically there was a marked change. Some of the deities invoked in the hymns of the Rig Veda were forgotten, and those who were retained generally lost much of their pristine dignity, owing to the exclusively sacrificial interests of the priest as explained above; only a few were promoted to a higher position. Besides these, some new gods were received into the Hindu pantheon. The majority of the Vedic gods lost their share in popular worship without ceasing to be considered powerful deities. This brought about a changed conception of these gods in two ways: (1) The anthropomorphic element in their character was greatly developed, since it was not to the priests, but to poets and legend-mongers that the care of mythology was now entrusted. (2) The gods generally became departmental divinities to a

much greater extent than before. This fact is most striking in some cases where gods have attributed to them definite functions with which in the Rig Veda they had but a very slight, if any, connexion. Thus Varuṇa became the ocean-god, while in the Rig Veda his connexion with water seems to be more of an accident. The Vedic Savitṛ is not a proper sun-god; in later mythology he is identical with Sūrya, and represents the heavenly luminary. Soma, whose character as moon-god in the Rig Veda is still controverted, is acknowledged as such in Brāhmanical mythology, and Yama in like manner appears as the ruler of the nether world. This tendency to distribute the departments of nature among the gods, clearly discernible in most cases, prevented the gods from becoming little more than holy names after they had ceased to be worshipped by the people.

The Vedic gods who continue to be generally acknowledged in the Brāhmanical period are Agni, Indra, Savitṛ, Soma, Vāyu, Varuṇa, Yama, and the Aśvins; and, in addition to them, Prajāpati, Viṣṇu, and Rudra. The three last named, who became the Supreme Gods, will be considered towards the end of this article; we shall treat first of the other gods borrowed from the Veda, and next of the principal new gods who originated or came to the front in post-Vedic times.

1. Vedic gods.—Agni is, in the Rig Veda, the personification of the sacrificial fire; he, therefore, was the god of the priests and the priest of the gods. The Vedic conceptions of Agni are partly retained and occasionally revive in later mythology. Thus he represents Brahmanhood just as Indra represents the *kṣatriya*, or warrior-class; he is the leader of the gods, who are therefore *agni-purogama*. The common synonyms of *agni*, 'fire,' in classical Sanskrit, viz. *vahni*, *hutavāhana*, *hutāśana*, are derived from Vedic conceptions of Agni. But, on the whole, the later Agni is simply a personification of the element fire. Therefore he is spoken of as having wind for his charioteer (*vātasārathi*), and smoke as a banner (*dhūmaketu*). The various aspects of fire occasionally appear as traits of Agni's character, as will be seen in the legends related of him. Some forms of fire, especially as the terrible and destructive element, seem to have been worshipped under other names. According to the *Śatapatha Brāhmaṇa*, Agni was called Bhava by the Vāhīkas, Śarva by the Eastern people. He was also called Paśūnām pati ('lord of beasts') and Rudra. This seems to indicate that the *popular* worship of Agni was early transferred to deities of the Rudra type. It may be questioned whether there were any temples of Agni, and whether he received worship except in Vedic sacrifices.

Agni is present in every fire; therefore it was possible to relate legends of many Agnis and to make out genealogies of them (*Mahābhārata*, iii. 219–222, and differently *Vāyu Purāṇa*, i. 29). This accounts also for the fact that contracts were made in the presence of fire; for thus Agni, the omniscient god, was a witness to the contract. Fire, in a mysterious way, resides in all creatures; it is recognized as the cause of digestion. Therefore Agni is an omniscient god. The following legends will give an idea of Agni's position in later mythology:

Agni was created by Brahmā, and invested by him with his functions. But Aṅgiras was, on account of his austerities, considered superior to Agni. Therefore the god wanted to lay down his office, but Aṅgiras dissuaded him from retiring, and was therefore adopted by him as his son (*Mahābhārata*, iii. 217). Aṅgiras' son was Bṛhaspati, from whom the race of Agnis, mentioned above, is derived.

In the Rig Veda, Bhṛgu, or the race of Bhṛgus, is said to have kindled Agni for the establishment and diffusion of fire on earth; but in the *Mahābhārata* the relation between Agni and Bhṛgu is strangely changed. Bhṛgu had been created by Brahmā from the fire at Varuṇa's sacrifice. His wife was Pulomā. While she was pregnant, the Rākṣasa Puloman visited her during her husband's absence, and falling in love with her wanted to carry her off. He asserted that he had been betrothed to her before she married Bhṛgu, and he called Agni to witness. The god declared that the Rākṣasa had, indeed, first chosen her, but that she had been bestowed by her father on Bhṛgu, who with Vedic rites made her his wife. Then the Rākṣasa, in the shape of a boar, carried her off. But during the flight Pulomā miscarried, and the child dropped from her womb; wherefore, he was called *Chyavana*. At the same time the Rākṣasa was reduced to ashes. Upon learning that Agni had made Pulomā known to the Rākṣasa, Bhṛgu pronounced on Agni as a curse that he should devour all things (become 'the all-eater,' *sarvabhakṣa*). Agni, out of resentment, now withdrew from all sacrifices, but was at last induced by the entreaties of the gods and Ṛṣis to make Bhṛgu's curse come true, and again to receive the offerings for the gods (*Mahābhārata*, i. 5 ff.; see, further, art. BHṚIGU).

The retirement of Agni from the world, his hiding in the ocean, in the earth, in plants, especially the Śamī (used in fire-rubbing), is more than once spoken of in the *Mahābhārata*. Some animal always betrayed Agni to those who sought him, and he laid as a curse upon the betrayer some defect which characterises the animal in question. But it may be doubted whether these speculations formed part of a general belief. The same may be said about his parentage, or rather origin, which is variously stated according to particular Vedic ideas. He is one of the eight Vasus, their leader, just as in later Vedic texts.

Agni's wife is Svāhā, daughter of Dakṣa. He jointly with Śiva was father of Skanda, as will be related below. We hear occasionally of other offspring of Agni, among which the best known name is that of the sage Agniveśa. In one case, however, he became connected with epic history through his relation to the dynasty of Māhiṣmatī on the Narmadā.

Duryodhana, king of Māhiṣmatī, had by Narmadā a beautiful daughter called Sudarśanā, with whom Agni fell in love. In the guise of a poor Brāhman he asked her in marriage. But, her father not consenting, he withdrew from the sacrificial fire. He then made himself known, and received the maiden on condition that he should always be near the king. Agni's son by Sudarśanā was Sudarśana, who as a householder vanquished Death (*Mahābhārata*, xiii. 2). In another place (*ib.* ii. 31) this story is told differently. Nīla, king of Māhiṣmatī, had a beautiful daughter who used to stand near the sacrificial fire and fan it. Thus Agni became enamoured of the damsel, and the fire would not burn unless agitated by the breath from her lips. One day the god, in the guise of a Brāhman, visited the girl, but he was discovered by the king and ordered to be executed. Then Agni revealed himself to him, and Nīla gave him his daughter in marriage. The god henceforth aided the king in battle, so that his troops became invincible. So it happened that Sahadeva the Pāṇḍava on his *digvijaya*, or conquest of the world, could not overcome Nīla till Agni allowed the king to submit.

Another local legend in which Agni plays the principal part is the burning of the Khāṇḍava forest. It is connected with the main story of the *Mahābhārata*, and is there (i. 222 ff.) told thus. Agni had feasted twelve years, during king Śvetaki's sacrifice, on butter, and he afterwards refused to eat the offerings of other men; he accordingly grew feeble, and complained about it to Brahmā, who advised him to burn the Khāṇḍava forest and to feed on the creatures dwelling in it, who were enemies of the gods. Agni in the guise of a Brāhman accosted Arjuna, who together with Kṛṣṇa was sitting on the bank of the Yamunā, and asked his permission to devour the Khāṇḍava forest, which was protected by Indra. He procured for Arjuna the bow *gāṇḍīva*, and gave Kṛṣṇa his discus. He then set the wood on fire, while Kṛṣṇa and Arjuna, posted at either end of the forest, hindered the animals from escaping and the gods from injuring Agni. Thus the whole forest was burned down, the fire lasting a fortnight. It is twice stated that Agni had once before burned down this forest. Probably this story has no mythological bearing; it seems to be a legendary account of the clearing of the forest when the city Khāṇḍavaprastha, which was selected as their capital by the Pāṇḍavas, was founded.

It may be mentioned that, in the *Mahābhārata*, Dhṛṣṭadyumna is regarded as an incarnation of Agni; as is Nīla, the monkey, in the *Rāmāyaṇa*.

Agni is one of the eight *lokapālas*, or guardians of the four cardinal and the four intermediate points of the compass, and presides over the south-east, which is accordingly called *Āgneyī diś*. He is usually represented in pictures as riding on a ram, but his epithets *chhāgaratha* and *chhāgavāhana* point to the he-goat instead of the ram. There seems to have been no definite idea about his figure except that he had seven tongues, the names of which are already given in the *Muṇḍaka Upaniṣad*, i. 2, 4. He has a great many names; indeed, all words for 'fire' may be used to designate Agni; the more common ones are *Hutabhuj*, *Hutavāhana*, *Vahni*,

Anala, Pāvaka, Kṛśānu, Yibhāvasu, Jātavedas, Hiraṇyaretas, etc. (*Amarakośa*, I. i. 1. 48 ff.). See, further, Adolf Holtzmann, *Agni nach den Vorstellungen des Mahābhārata*, 1878.

Indra (Śakra) in Brāhmanical mythology is the ruler of heaven, and represents the *kṣatriya*, or warrior-class. He is supposed in a passage of the *Nalopākhyāna* to receive visits from kings, his colleagues on earth. In another passage (*Mahābhārata*, i. 197) the office of Indra is stated not to be permanent; there were other Indras before him, and there will be after him. In Buddhist works he is frequently called *Sakko devānam indo*, 'Sakra, the Indra of the gods,' just as in classical Sanskrit *indra* at the end of a compound denotes a superior individual of its class. Indra is always in terror lest some saint should by severe austerities wrest his power from him; and when there is a danger of this kind, he sends one of the *apsaras*, or heavenly nymphs, to seduce the saint from his ascetic exercises. Still he is regarded as the powerful lord of heaven and the chief of the gods; but, in comparison with the Supreme Gods—Brahmā, Viṣṇu, and Śiva—he, like the remaining gods, occupies but a second rank. We may therefore assume that, before the rise of the Supreme Gods, Indra held the first rank in popular belief. There was a popular festival held in his honour—the erection of Indra's pole (*indradhvaja*)—which is described in the *Kauśikasūtra* and at a late period by Varāhamihira (*Bṛhatsaṁhitā*, ch. 43). Though there are no temples of Indra, at least in more modern times, his images and niches dedicated to him are met with in temples of other gods, and so he may be said to receive a kind of indirect worship. The same remark applies to other gods to whom no temples are dedicated.

Indra's weapon is the thunderbolt (*vajra*); the rainbow is called 'Indra's bow.' He rides on the elephant Airāvata, or in a heavenly car driven by his charioteer Mātali. His capital is Amarāvatī, his palace Vaijayanta; his park, situated on the north of Mount Meru, is Nandana; in it grows the Pārijāta tree (which was torn from it by Kṛṣṇa and planted in Satyabhāmā's garden). He is the regent of the East. Indra's wife is Indrāṇī, usually called Śachī or Paulomī, daughter of the Asura Puloman, whom he slew. His son is Jayanta.

Indra has a thousand eyes, which may be interpreted as the stars of the firmament; but in legendary mythology they are explained differently. Indra seduced Gautama's wife Ahalyā, and therefore the saint laid upon him the curse that his body should be covered with a thousand marks resembling the female organ; when Gautama relented, he changed these marks into eyes. According to another story, the thousand eyes originated when Indra was gazing on the heavenly nymph Tilottamā (*Mahābhārata*, i. 211).

Many stories are told of Indra, some of which have developed from Vedic myths. His most famous deed, the slaying of Vṛtra, is variously told. According to one version of the story (*Mahābhārata*, xii. 342), Viśvarūpa or Triśiras, Tvaṣṭṛ's son, was *purohita* of the gods, but he favoured also the Asuras, to whom he was related through his mother. Hiraṇyakaśipu, the leader of the Asuras, brought him over to his party, and dismissed his *hotṛ* Vasiṣṭha, who thereupon cursed him to the effect that he should be killed by a being hitherto not existing (Viṣṇu in the shape of a man-lion). Triśiras, in order to aggrandize the Asuras, practised severe penance; but heavenly nymphs sent by Indra succeeded in seducing him from his austerities. This aroused him to great wrath, and he began to utter powerful spells, by virtue of which his size increased immensely. With one of his mouths he drank all the soma, with the second he devoured all the offerings, and with the third he drank up the energy of Indra and the gods. Reduced to weakness, the gods asked, on the advice of Brahmā, the Ṛṣi Dadhīchi for his bones, from which the thunderbolt was produced. With this weapon, which was pervaded by Viṣṇu's energy, Indra slew Triśiras. From the corpse rose a mighty Asura, named Vṛtra, who became Indra's enemy, but was at last killed by him with the thunderbolt (cf. Muir, *Original Sanskrit Texts*, v. 230 ff.).

According to another version of the same story (*Mahābhārata*, v. 10), Indra killed Vṛtra in the twilight with the froth of the sea. For the Brāhmans had conferred upon Vṛtra the boon that he might not be killed by any weapon, either by what was dry or what was wet, either in the daytime or at night. According to a third version (*ib.* iii. 100), Vṛtra is not connected with Tvaṣṭṛ; he is a mighty Asura who leads the Kāleyas against the gods. It is in this emergency that Dadhīchi yields up his bones, from which Tvaṣṭṛ forges the thunderbolt. According to a fourth version (*ib.* xii. 281 f.), the cause of Vṛtra's defeat was a dreadful fever, Śiva's energy, which entered the demon and weakened him.

By the killing of Vṛtra, Indra was polluted with the heinous sin of Brahmanicide (*brahmahatyā*), and he fled in great terror to the end of the world. There he entered water, and concealed himself in the fibre of a lotus. The gods then placed Nahuṣa, Āyus' son, on the throne of Indra. But Nahuṣa at last came to ruin through his inordinate desire of Śachī (see AGASTYA). The gods discovered Indra's retreat, and Bṛhaspati cleansed him by a horse-sacrifice from the *brahmahatyā*, which was distributed amongst women, plants, etc. Indra was then reinstated as ruler of the heavens (*Mahābhārata*, v. 11 ff.).

Indra slew many demons besides Vṛtra, such as Bala, Namuchi, Jambha, Pāka, etc. From the victory over these he derives some of his names—Balasūdana, Pākaśāsana, etc. An instance of his hostility to the Daityas is supplied by the following myth: When many sons of Diti had been slain, she asked her husband Kaśyapa for a son who should kill Indra, and Kaśyapa granted her request on condition that she should strictly preserve purity for a thousand years. Once, however, she slept in an impure position, with her feet upwards. Indra availed himself of this opportunity, and, entering Diti's womb, cut into seven pieces the child with which she was pregnant. Thus originated the seven Mārutas, or regents of the winds (*Rāmāyaṇa*, i. 46 f.).

A curious myth frequently alluded to in classical literature, but found already in the *Maitrāyaṇī Saṁhitā* (i. 10, 13), relates that Indra cut the wings of the mountains, which originally flew about like birds, but then were forced to settle down for ever. Only Maināka, son of Himālaya and Menā, escaped this fate; he concealed himself in the ocean, and was protected by Sāgara.

In some legends Indra appears as the opponent of other gods. When the Ṛṣi Chyavana was giving the Aśvins a share of the soma-libation as a reward for having made him young again, Indra tried to prevent him. But Chyavana paralyzed his arm and created a huge monster Mada (intoxication). In great fright Indra then yielded, and *mada* was distributed over women, wine, dice, and the chase. In the story of Mada a trait of the Vedic Indra survives, viz. his habit of getting drunk; in classical mythology the god who is given to drunkenness is Baladeva, brother of Kṛṣṇa. On Indra's rivalry with Kṛṣṇa turns the story of his deluging the land of the Vrajas. But Kṛṣṇa kept off the rain and protected the land by holding up on his finger Mount Govardhana. On another occasion Kṛṣṇa carried off the Pārijāta tree, which belonged to Śachī, and defeated Indra, who with his forces had come to hinder him. Indra, who is also called Meghavāhana, was defeated in battle by Rāvaṇa's son Meghanāda, who from this victory came to be named *Indrajit*.

Here we must make a remark of more general application. When the ancient gods ceased to appeal to the masses of the people in that form in which they were represented in the Veda, the same god under a particular aspect became in some cases popular, and was hence regarded as a separate god, demigod, or as a hero connected somehow with the original god. A popular godling, with functions similar to those of an ancient god, grew up as a kind of duplicate of the latter; or, if he was not accepted as a god proper, he came, by the anthropomorphic influence of epic poetry, to be regarded as a hero, whose resemblance to the ancient god was explained by the assumption that he was an incarnation of that deity. Such a process, inferred from the result, is assumed in a number of cases, which will be adverted to below.

Thus Arjuna is, according to the *Śatapatha Brāhmaṇa* (II. i. 2. 11), a mystical name of Indra; and he was, according to Pāṇini (iv. 3. 98), worshipped just as Vāsudeva was. But Arjuna is one of the principal heroes of the *Mahābhārata*, and is intimately connected with Indra; he stays five years in Indra's heaven, and there learns the use of the magical weapons (*Mahābhārata*, iii. 41 ff.). He is, however, not regarded as an incarnation of Indra, as his name *Aindri* would lead us to expect, but of Nara, a somewhat ill-defined deity. Arjuna is the enemy of Karṇa, a son of the Sun, and kills him. Similarly, in the story of the *Rāmāyaṇa*, Vālin, Indra's son, is the enemy of Sugrīva, son of the Sun; but here he is killed by the latter (iv. 16 ff.). In popular belief there seems to have been a hostility between Indra and the sun-god: a trace of such a belief, though a very faint one, may perhaps be found in the Vedic reference to a conflict of Indra with Uṣas, the goddess of dawn (*Rigv.* IV. xxx. 8–11).

The sun-god (Āditya, Savitṛ, Sūrya, etc.).—In Vedic times there were several sun-gods; in later

times they are all merged in one, who is called indiscriminately by their names—Sūrya, Savitṛ, Mitra, Aryaman, Pūṣan,—besides bearing such names as Āditya, Vivasvat, Vikartana, etc. He continued to be a popular god even after the rise of the supreme gods: temples were dedicated to him, sects acknowledged him as the highest deity, and hymns were composed in his honour, of which the *Sūryaśataka* by Mayūra, Bāṇa's son-in-law, is a deservedly admired poem of classical Sanskrit literature. The enumeration of his 108 names in *Mahābhārata*, iii. 3, proves his popularity in the period of the great epic.

The sun originated in the beginning from the Veda; he contains the Veda, is the glory of the Veda, and is called the Supreme Soul. Mythologically he is the son of Aditi, Kaśyapa's wife. Aditi invoked the sun for a son who should vanquish the Asuras, and became pregnant through a ray of the sun. She brought forth, in due course, an egg which became the sun Mārtaṇḍa.

Viśvakarman, who is regarded as a Prajāpati, gave his daughter Sañjñā to the Sun for wife. She bore him two sons, Manu Vaivasvata and Yama, and one daughter, Yamī or Yamunā, the river of that name. Now, the splendour of the sun was so great that Sañjñā could not bear to look on him. She therefore substituted for herself Chhāyā, her shadow, and, thus deceiving her husband, she went to her father's; but, as Viśvakarman was determined to send her back to her husband, she fled in the shape of a mare to the Uttarakurus. Meanwhile Chhāyā bore to the Sun two sons, Sāvarṇi and the planet Saturn, and a daughter, the river-goddess Tapatī, afterwards mother of Kuru. Chhāyā preferred her own children to those of Sañjñā, and thus the Sun detected the fraud committed by his wife. He went to Viśvakarman and asked him to reduce his splendour, so that Sañjñā might bear his light. Viśvakarman therefore put him on his lathe and pared down the body of the sun by a sixteenth part. From the parings were formed Viṣṇu's disc, Śiva's trident, and other weapons of the gods. The Sun, learning from Viśvakarman the retreat of his wife, went in the shape of a horse to the land of the Uttarakurus. There he met Sañjñā, who, not allowing him to approach her from behind, turned her head towards him. From the breath of their nostrils were produced the two Aśvins, hence called *Nāsatyas*, and from the semen of the horse was born Revanta, chief of the Guhyakas.

A well-known myth explains the eclipses of sun and moon. When, by the churning of the ocean, the *amṛta*, the drink of immortality, had been produced and was being drunk by the gods, an Asura named Rāhu, in the guise of a god, got hold of it. The sun and the moon perceiving it, informed Viṣṇu, who at once cut off the head of Rāhu before the *amṛta* had gone down his throat. Therefore the head only of Rāhu became immortal. Since that time Rāhu hates and pursues the sun and moon, and when he gets hold of them swallows them.

The sun-god plays an important part in epic history. His son Manu Vaivasvata became the progenitor of mankind, and his grandson Ikṣvāku was the founder of the Sūryavaṁśa or the solar race of kings, to which Rāma belongs, and which forms the subject of Kālidāsa's poem *Raghuvaṁśa*. Karṇa, the leader of the Kauravas and the antagonist of Arjuna in the *Mahābhārata*, is his son. For Kuntī before her marriage with Pāṇḍu invoked the sun-god and bore him a son, Karṇa, who was born with a golden coat of mail and golden earrings. Afterwards, Indra in the guise of a Brāhman induced him to exchange this miraculous armour for the never-erring spear with which he killed Ghaṭotkacha. At last he was killed by Arjuna. Karṇa was probably a local variety of Sūrya (perhaps as the sun doomed to die), and from a god became an epic hero. In the *Rāmāyaṇa* the monkey-king Sugrīva is a son of Sūrya; he was first exiled by his brother Vālin, son of Indra, but afterwards he vanquished Vālin, with the help of Rāma, who from an ambush pierced him with an arrow. This story also seems to be based on a myth in which Indra and Sūrya were presented as rivals. Sūrya rides in a car drawn by seven horses (*harit*); his charioteer is Aruṇa, the dawn, who tempers the excessive splendour of the god.

An ancient variant of the sun-god is Garuḍa, the divine king of birds, on whom Viṣṇu rides. The myth which relates the birth of Garuḍa is perhaps the most perspicuous of Indian nature-myths. It is thus related in the *Mahābhārata*, i. 16 ff.:

Kadrū and Vinatā (representing dark night and waning night), daughters of Dakṣa, were both married to Kaśyapa. Kadrū laid a thousand eggs, Vinatā two. After 500 years the eggs of Kadrū burst, and out came a thousand snakes (Nāgas). Then Vinatā grew impatient, and opened one of her eggs; it contained a bird whose upper part only was developed—*Aruṇa*, the dawn. He became the charioteer of Sūrya. After another 500 years the second egg of Vinatā burst, and yielded an enormous bird—*Garuḍa*, the devourer of snakes (*i.e.* darkness). He at once took to his wings to seek for the food assigned him by the ordainer of all. By this time Vinatā had become the slave of her sister Kadrū. For the sisters had wagered as to whether the divine horse Uchchaiḥśravas was white or black, and Kadrū by fraud had won the bet, which stipulated that the loser should become slave to the winner. Thus Garuḍa, too, became the servant of the snakes, and had to obey their commands. They promised, however, to set him free, if he brought them the *amṛta* (which in this account is confounded with the soma). After many adventures Garuḍa came to the place where the *amṛta* was kept, vanquished the guardian-gods, extinguished the fire which was burning round the *amṛta*, overcame all obstacles, and succeeded at last in carrying off the *amṛta*-soma. In vain Indra hurled his thunderbolt at him; it brought down only one feather of the bird. Indra then entered into friendship with him. Garuḍa placed the *amṛta* on the ground strewn with *kuśa* grass, and invited the snakes to partake of it. While they bathed, as is the custom to do before meals, Indra carried off the *amṛta*. Garuḍa was rewarded for his deed by Viṣṇu, who chose him for his service as the bird on which he rides, and assigned him his standard to rest upon.

This myth, the latter part of which can be traced back to the Rig Veda, leaves no doubt that the sun is meant by Garuḍa, and consequently darkness by the snakes, his food. Apparently Garuḍa was never regarded as the equal of Sūrya, who therefore engrossed the whole sun-worship; still Garuḍa's claim to worship was recognized by making him the servant and companion of Viṣṇu, who from being a solar deity had been promoted to the rank of a Supreme God. Garuḍa is also called *Suparṇa*, and it may be remarked that there is a class of Suparṇas, or bird-genii, who frequently figure on ancient sculptures. He is also identified with *Tārkṣya*, originally a distinct mythical being, figured either as a bird or as a horse, and apparently representing the sun. Garuḍa seems, therefore, to be a combination of different divine forms of the sun represented as a winged being.

Soma, the moon-god.—As a departmental god, Soma represents the moon; but since he is identified with the Vedic god Soma, who especially represents the sacred soma-juice, the functions of the latter are also ascribed to the moon-god. Hence he is the sovereign of the stars as well as of the plants and of the Brāhmans; and in poetry his rays are said to consist of *amṛta*. Though he was a deity of great holiness, he seems scarcely to have received popular worship as a separate god; at least no temples seem to have been dedicated to him. (The famous shrine at Somanātha was sacred to Śiva, and so was Somatīrtha in Śrīnagara; see Stein, *Kalhaṇa's Chronicle of Kaśmīr*, ii. 450.) The moon is said to have been produced either from the eye of Atri, son of Brahmā, or, together with other precious things, at the churning of the ocean. He married the 27 Nakṣatras, daughters of Dakṣa, *i.e.* the 27 mansions of the moon. But he preferred the beautiful Rohiṇī (Aldebaran), and neglected his remaining wives. Dakṣa fruitlessly blamed him for his neglect of duty towards them, and at last he cursed him to the effect that he should die of consumption. So the moon began to wane, and at the same time all creatures grew weaker and weaker. Then Dakṣa mitigated his curse to the effect that the moon should alternately wane and wax every month. At full moon only a trace of his illness remains; it is the dark spot on his disc in the shape of a hare. His cure was brought

about by bathing at Prabhāsa, where the Sarasvatī falls into the western ocean.

From Soma sprang the Somavaṁśa, or lunar race of kings. Soma carried off Tārā, the wife of Bṛhaspati, though Brahmā bade him restore her to her husband. Uśanas, the teacher of the Asuras and the enemy of Bṛhaspati, together with the Asuras sided with Soma in the conflict between them and the gods. At last Soma was compelled to give up Tārā. After some time she gave birth to a boy whose parentage was doubtful; and she declared, when coerced, that he was the son of Soma. The boy was named Budha (the planet Mercury), who afterwards married Iḷā, daughter of Manu. Their son was Purūravas, with whom the lineage of lunar kings begins.

The moon plays an important part in the ancient belief about the life after death. The souls of the deceased are supposed to go to the moon, and assembling there cause her waxing. At full moon, the moon sends some spirits on to the world of Brahmā (*devayāna*), and sends the rest as rain down to the earth to be born again (*pitṛyāna*). Their stations on both paths are variously stated (see Deussen, *System der Vedānta*, 1883, pp. 392, 409, 475).

Vāyu (Vāta Māruta) is the divine personification of wind, the fourth element of the Indians, which, it should be noted, constitutes as breath the principle of life; Vāyu has therefore power also over the animal world. He presides over the North-west. Since the invisible element of wind does not easily lend itself to anthropomorphism, scarcely any myths are told of Vāyu; nor did the god receive popular worship. He was too much of an abstraction to appeal to the religious feelings of the people. But there were *popular* wind-gods, variants of Vāyu as it were, who in epic language were therefore styled sons of Vāyu or Māruta. One of them is Hanumat, the valorous monkey of the *Rāmāyaṇa*, who jumped the ocean and brought Rāma tidings from his bride Sītā; he is now the tutelary god of all village settlements. The writer of the present article believes that he is connected with the monsoon (Jacobi, *Rāmāyaṇa*, p. 132). Another son of Vāyu is Bhīma of the *Mahābhārata*, the second of the five Pāṇḍava brothers. There are traces in his character which seem to indicate a demonic origin. He is frequently brought into relation with the Rākṣasas; he not only fights them, but he marries the Rākṣasī Hiḍimbā, by whom he has a son, the famous Ghaṭotkacha. He is a ravenous eater (*vṛkodara*), and is of great fierceness; he tears open the breast of his enemy Duḥśāsana and drinks his blood. He may have been a godling, a personification of the destructive power of the storm, before he became an epic hero.

There is a plurality of wind-gods—the Maruts, who formed seven tribes descended from the seven parts into which the embryo of Diti was split by Indra (see above), or into which the semen of the sage Maṅkaṇaka was divided (*Mahābhārata*, ix. 38). In the Rig Veda the Maruts are the companions of Indra, in later mythology of Vāyu; the word, however, may lose its special meaning and denote gods in general.

Varuṇa in Brāhmanical mythology is the ruler of the waters and the god of the ocean. He still carries the noose, and is called Prachetas, as in the hymns of the Rig Veda; but his Vedic characteristics, except those relating to water, are forgotten or only occasionally remembered. For instance, his association with Mitra comes out only in a legend relating the origin of Vasiṣṭha (Maitrāvaruṇa; see *Rāmāyaṇa*, vii. 56 f.). He resides in the ocean. But there is also a world of Varuṇa, the Varuṇaloka, situated somewhere below the earth; it is full of wonders, and in it reside Varuṇa, his son Puṣkara, and all his progeny. This Varuṇaloka would seem to suit the Vedic Varuṇa better than the later ocean-god. To the latter belongs the miraculous umbrella (*Mahābhārata*, v. 98). Mention is made of a bow of Varuṇa, from which originated the *gāṇḍiva*, the bow he gave to Arjuna. Wine (*surā*) is called *vāruṇī*, i.e. 'belonging to Varuṇa'; and the goddess of wine, Vāruṇī, who appeared at the churning of the ocean, is regarded as Varuṇa's daughter or his wife.*

There is, however, another god of the sea, Sāgara, distinct from Varuṇa. It was Sāgara, not Varuṇa, who appeared to Rāma when he wanted to force his passage through the sea; and in romantic tales of the Middle Ages the god of the sea is called Sāgara, not Varuṇa.

Yama, in the Rig Veda a deified hero, has become in Brāhmanical mythology the dreaded god of the nether world, the sovereign of the damned, and the regent of the South. He is the son of the sun-god Vivasvat, brother of Manu and Yamunā. His messengers fetch the souls of dying men and lead them to Yama's hall, where Chitragupta the recorder reads the account of their deeds, and the god sits in judgment upon them. Yama is called also Mṛtyu, Kāla ('death'), Antaka, Kṛtānta ('maker of an end'), Pretarājā ('king of ghosts'), Pitṛpati ('lord of the manes'). He carries a rod (*daṇḍa*) or a noose (*pāśa*), and rides on a buffalo. Yama is frequently introduced in epic stories. The best known instance is his meeting with Sāvitrī, to whom he granted the restoration of her husband to life; the episode of the *Mahābhārata* which relates this event is reckoned one of the gems of the great Epic.

In a less awful aspect Yama appears as *Dharmarājā*, 'king of law.' As such he seems occasionally to have been confounded with the god Dharma, the personification of justice, the father of Yudhiṣṭhira.

The Aśvins have lost, in Brāhmanical mythology, whatever cosmical element they had in the hymns of the Rig Veda. They continue to be regarded as beautiful youths and physicians. Their names are now given as Nāsatya and Dasra—originally epithets applying to either of them. Their origin from the breath of Sañjñā and Sūrya has been mentioned above (under 'sun-god').

The best known story related of them is their cure of Chyavana, the old husband of Sukanyā, the beautiful daughter of king Śaryāta. They wanted to seduce Sukanyā, but she would not consent, and as a boon they consented to make her husband young again. The Aśvins were rewarded for this by being admitted to a share of the soma. The details of this legend differ in the *Śatapatha Brāhmaṇa* and the *Mahābhārata* (see Muir, *op. cit.* v. 250 ff.). Another cure wrought by the Aśvins is told in *Mahābhārata*, i. 3: they restored eyesight to Upamanyu, who had fallen into a well and there invoked them in an interesting hymn.

With epic history the Aśvins are connected in the *Mahābhārata* as the fathers of Sahadeva and Nakula, the twin sons of Mādrī; and in the *Rāmāyaṇa* they are the fathers of the monkeys Dvivida and Mainda.

Finally, we must mention Bṛhaspati, who, in the hymns of the Rig Veda, is invoked as a god, the impersonation of the power of devotion; in Brāhmanical mythology he is not a god in the proper sense of the word, but rather a divine sage. He is the teacher (*guru*) and household priest (*purohita*) of the gods; he is identified with Vāchaspati ('lord of speech'), and with the planet Juppiter. According to *Mahābhārata*, iii. 217 ff., he is the son of Aṅgiras, and from him is descended the family of Agnis. His wife is Tārā (see above under 'Soma'). Bṛhaspati's rival is Kāvya Uśanas or Śukra, teacher of the Asuras, who is identified with the planet Venus.

* An incident which is thought to show some resemblance between Neptune and Varuṇa is related in *Mahābhārata*, iii. 115. Varuṇa gave to the sage Richīka a thousand white horses, which Gādhi demanded of him as the price for his daughter Satyavatī.

Most of the gods treated of hitherto have this in common, that, though fully recognized in mythology, they lost more or less of their importance as popular gods. It was different with two old gods, *Viṣṇu* and *Rudra*, and with the youngest of Vedic deities, *Prajāpati*. They advanced to the position of Supreme Gods, and the first two became the highest objects of worship. Before we treat of the rise of these three gods, we must complete our description of the Indian pantheon. First we shall treat of the post-Vedic gods of similar rank to those inherited from the Vedic period, then of minor divine beings, and of saints.

2. **Post-Vedic gods.**—(*A*) *Those of high rank.*—To the post-Vedic period must be assigned Kumāra, the war-god (called also Skanda, Kārttikeya, Guha, Mahāsena, etc.). He is first mentioned in the *Chhāndogya Upaniṣad*, vii. 26. 2, where he seems to be identified with the sage Sanatkumāra. His origin, however, must be looked for in popular belief, which seems to have varied a good deal in details respecting the war-god, as will be seen in the sequel. Kumāra is regarded as the general (*senāpati*) of the gods. His introduction as a new god was probably due to a change in the government of Indian States. Originally the king was both ruler in peace and leader in war, but afterwards the office of general became distinct. When this institution had become generally recognized, it was thought necessary, as we may assume, that there should be in heaven too a *senāpati* as well as a king. And since the *senāpati* frequently succeeded in supplanting the king, and the latter was often justified in being jealous of the former, it is but natural that Indra should at first try to suppress Kumāra, as is told in the narrative of the latter's birth.

The myth of the birth of Kumāra is variously related (*Mahābhārata*, iii. 225 ff., ix. 44 f., xiii. 84 ff. ; *Rāmāyaṇa*, i. 36 f.), his father being given both as Śiva and as Agni, his mother as Umā, Gaṅgā, and quite a number of minor deities. These rival claims to his parentage had to be settled, and this was effected by the assumption of a sort of joint parentage, and by making some of the female deities his nurses or adoptive mothers.

The most generally adopted account of Kumāra's birth is as follows: The gods were afraid that from the embrace of Śiva and Pārvatī a being would be produced whom the world would be unable to bear, and therefore they entreated Śiva not to discharge his vital seed. However, part of it had already come forth, and this was taken by Agni and thrown into the Gaṅgā. But the latter could not retain it, and threw it on the slope of the Himālaya into a thicket of reeds (*śaravaṇa*). There it was transformed into a fine boy, who was found by the six Kṛttikās (the Pleiades). As each of them desired him to be her own son, he assumed six faces, and sucked their breasts simultaneously. Hence he is called Kārttikeya and Ṣaṇmukha. [In point of fact, the name Kārttikeya seems to be derived from Kārttika, the first month of autumn, when, on the cessation of the monsoon, the roads became practicable, and kings were wont to set out on war expeditions.] According to another version, the Kṛttikās were formerly the wives of the seven Ṛṣis (for the Indians knew that there was a seventh star in the Pleiades, though they usually counted but six). Agni fell in love with the wives of the Ṛṣis, and Svāhā, his own wife, becoming aware of it, assumed the form of one of these ladies, approached Agni, and cohabited with him; she then brought Agni's semen to a golden lake, and threw it therein. This she repeated five times, for she was unable to assume the form of Arundhatī, the faithful wife of Vasiṣṭha. The remaining six Ṛṣis forsook their wives, who were transferred to the sky as the Kṛttikās.

The feats of Kumāra which are most generally known are the killing of the Asura Tāraka, and the splitting of Mount Krauñcha in the Himālaya. When Tāraka had vanquished the gods and was oppressing them, they asked Brahmā for a leader, and were told by him that only from the seed of Śiva would be produced the future conqueror of the mighty Asura. Śiva, however, was still an anchorite, practising severe austerities in the Himālaya. Kāma, the god of love, was now called upon to cause Śiva to fall in love with Umā (or Pārvatī), the beautiful daughter of Himālaya. He succeeded in his undertaking, but was reduced to ashes by the fire issuing from the eye on the forehead of Śiva, who was in great wrath when he became aware that Kāma had dared to disturb him in his ascetic exercise. Śiva was, however, won by the graces and merits of Pārvatī, and finally married her. These incidents form the subject of Kālidāsa's famous poem, *Kumārasambhava*. The rest of the story, telling how Kumāra was born, has been given above. The new-born Kumāra was installed general of the gods, engaged in battle with Tāraka, and killed him.

On another occasion, the Daitya Bāṇa, son of Bali, attacked the gods from the mountain Krauñcha, but he took shelter in the mountain when Kumāra assailed him. The latter pierced the mountain with his javelin, split it in twain, and killed the demon. Thus an opening was effected for the geese and other birds on their passage to the north. The same incident is variously stated by different authorities (see Wilson, *Viṣṇu Purāṇa*, 1865, ii. 118 note).

The wife of Kumāra is Devasenā, a daughter of Brahmā. Her desire to get a husband superior in strength to the rest of the gods was, according to one account (*Mahābhārata*, iii. 224), the original cause of the birth of the war-god. Kumāra rides on the peacock, the son of Suparṇa.

The strange myth about the birth of Kumāra appears to be best interpreted on the assumption that in different parts of India there were several popular godlings of the war-god type, and that these have been combined into the one Kumāra, the war-god common to all Indians. But this process of amalgamation has left traces, which cannot be mistaken, elsewhere than in the strange myths related above. For there are three variants or alter-egos of Kumāra, viz. *Viśākha*, *Śākha*, and *Naigameya*. The first of these is known to have received popular worship (Patañjali, *ad Pāṇini*, v. 3. 99); he originated from a wound which Indra inflicted upon Kumāra, the new-born. From the same wound issued a great number of *kumāras*, and *kumārīs*, goblins, who spirit away little children (*Mahābhārata*, iii. 228, where two more brothers, Śiśu and the goat-faced Bhadraśākha, seem to be assigned to Kumāra). The war-god has a great retinue of monstrous followers, male and female, of whom long lists are given in *Mahābhārata*, ix. 45 f. He was probably in the beginning conceived as the representative of a whole class of uncanny spirits somehow connected with fire, and was afterwards promoted to the position of a war-god, equal in rank with the ancient gods. His worship seems once to have been fairly general; at present he is worshipped chiefly in the south, where he is known under the name of Subrahmaṇya.

Another son of Śiva, or rather of Pārvatī, is Gaṇeśa. Originally he seems to have been conceived as the 'remover of obstacles,' as his names *Vināyaka* and *Vighneśa* indicate. As such he is figured with an elephantine head; he carries in one of his hands (*paraśupāṇi*) an axe, or one of his tusks, which has been broken off; he rides on, or is attended by, the rat, the animal which finds its way to every place. As 'remover of obstacles,' he is invoked at the beginning of all books, and thus in a secondary way he became the god of learning, especially of pandits and clerks. He is the latest of all Brāhmanical gods, for he is not mentioned in the *Rāmāyaṇa* and some of the older *Purāṇas*; and he was absent from the original *Mahābhārata*. He is first mentioned in Yājñavalkya, i. 270, 289, 293, as a demon taking possession of men, and thus hindering their success, but furthering them when propitiated. The name *Gaṇeśa* or *Gaṇādhipa* designates him as the leader of the Gaṇas, or followers in the retinue of Śiva. Yet he is not, as a rule, represented as leading the Gaṇas, whose actual leader is Nandi. But there is a class of demons, Vināyakas (see *Petersburg Dict.*, *s.v.*), who probably were represented by the new god Gaṇeśa. It deserves to be noted in this connexion, that, in the Rig Veda (II. xxiii. 1), Bṛhaspati is addressed as *gaṇānāṁ gaṇapati*; and Bṛhaspati, who is identified with Vāchaspati, is something like a Vedic counterpart of Gaṇeśa as a god of learning.

Gaṇeśa is the son of Śiva and Pārvatī, or rather of the latter, for he was produced from the unguents with which the goddess

had anointed herself. With the water of her bath they were conveyed to the mouth of the Ganges, and were there imbibed by Mālinī, a goddess with the head of an elephant. She gave birth to a boy who had four arms and five heads of an elephant. Gaṅgā chose him for her son, but Śiva declared him to be the son of Pārvatī. He reduced his five heads to one, and enthroned him on Añjanagiri as the 'remover of obstacles.' These details are given in the 18th canto of the *Haracharita* by Jayadratha, a native of Kashmīr, in the 13th cent., who professes to have composed his work from older sources. In the *Brahma Vaivarta Purāṇa*, the third book of which contains an account of Gaṇeśa, it is narrated that Gaṇeśa's head fell off when Pārvatī in the pride of her heart invited the planet Saturn to look at her baby, and that Viṣṇu afterwards substituted for it the head of an elephant. Gaṇeśa is figured with one tusk only (*ekadanta*). The loss of the other is variously accounted for. It was cut off, according to the *Śiśupālavadha*, i. 60, by Rāvaṇa; according to the *Brahma Vaivarta Purāṇa*, iii. 40, by Paraśurāma; and he lost it, according to the *Haracharita*, xviii. 23, through a bet with Kumāra as to who should go most quickly round the earth. Besides the particulars of his figure mentioned already, he has an exceedingly big belly. In his four hands he carries, according to Jayadratha, a tusk, a rosary, an axe, and a sweetmeat; in some pictures he carries a manuscript in one hand.

Kubera or Vaiśravaṇa, the 'lord of treasures' (*vitteśa*), 'king of the Yakṣas,' and 'regent of the north,' is already mentioned in the Atharva Veda as chief of the 'good people' (*puṇyajana*), or 'other people' (*itarajana*), and as concerned with 'concealment' (through hidden treasures).*

In the *Śatapatha Brāhmaṇa* and in later Vedic texts he is mentioned as king of the Rakṣas, and in the *Taittirīya Āraṇyaka*, i. 316, as lord of wishes and as possessor of a wonderful car (apparently the later Puṣpaka).

In later mythology he is the king of the Yakṣas as well as of the Kinnaras and Guhyakas, while the Rākṣasas are the subjects of his half-brother, Rāvaṇa. According to the *Rāmāyaṇa* (vii. 3 ff.), he is the son of Viśravas, and grandson of Pulastya, Prajāpati's son.

Viśravas had two wives, Devavarṇinī, daughter of Bharadvāja, and Kaikasī, daughter of Sumālī. By the former he had one son, Kubera; by the latter Rāvaṇa, Kumbhakarṇa, Vibhīṣaṇa, and Śūrpaṇakhā.† Viśravas gave Kubera for his residence the town Laṅkā, built by Viśvakarman on Mount Trikūṭa in the southern ocean. But Rāvaṇa expelled him from Laṅkā, and made it his own capital. Kubera then, by the advice of Viśravas, took up his residence on Mount Kailāsa, and became the regent of the north. But his connexion with the south, to which the above legend refers, was perhaps suggested by the name of the southernmost river of India, the Kāverī; for *Kāveraka* or *Kāberaka* occurs already in the Atharva Veda as a patronymic derived from Kubera. In support of this conjecture it may be mentioned that the name of the town Trichinopoly is popularly explained as *Triśiraḥpallī*, according to Lassen (*Ind. Altertumskunde*, 1878, i. 160) = 'town of Kubera,' for *Triśiras* is also a name of Kubera.

Kubera's town is Alakā, his park Chaitraratha; he has nine treasures (*nidhi*). He rides on a man (*naravāhana*); this curious item seems to indicate some near relation to men, and the same is suggested by his epithet or name *Nṛdharman*, which probably refers to his quality as bestower of riches (*śrīda*). His son is Nalakūbara, whose wife Rambhā was ravished by Rāvaṇa (*Rāmāyaṇa*, vii. 26). Kubera, as we have seen, was believed from very early times to preside over the guardians of treasures, who, it would seem, were originally called *rakṣas*, and later—to distinguish them from the devilish *rakṣas*, the disturbers of sacrifices—had been named *yakṣas*. As chief of the Yakṣas, he was supplanted, as far as popular worship is concerned, by Maṇibhadra, who is already mentioned in the *Rāmāyaṇa* (vii. 15), but who occurs chiefly in popular tales.

A god who is very frequently referred to in classical Sanskrit literature is the god of love, Kāma (Manmatha, Madana, Kandarpa, Smara, Anaṅga, etc.). Originally Kāma is 'desire,'—not of sexual enjoyment only, but of good things in general,—and as a personification of desire he is invoked in Atharva Veda ix. 2; but in another hymn of the same Veda (iii. 25) he is already conceived as the god of sexual love, in which function only he is known to later mythology. His parentage is variously stated, but usually he is regarded as the son of Dharma and Lakṣmī. His wife is Rati, the impersonation of sexual enjoyment; his friend and companion, Madhu, the first month of spring. Two sons of Kāma are occasionally mentioned, Harṣa and Yaśas.

The ideas entertained about Kāma may be gathered from his emblems and attributes. He carries a bow formed of flowers (*puṣpachāpa*); the string of this bow consists of bees, and the arrows of flowers (*kusumaśara*). There are five such arrows (*pañchabāṇa*), allegorically representing the infatuating powers of love (*śoṣaṇa*, *mohana*, etc.). He has on his banner the dolphin or a fish, denoting procreative power (*makara* or *matsya-ketu*); or he carries a flower in his hand (*puṣpaketana*). He is often spoken of as *ātmabhū* or *chittajanman*, 'born of the mind,' and was therefore called *anaṅga*, 'bodiless.' This latter quality is accounted for by a well-known myth mentioned above in connexion with the birth of the war-god.

Śiva reduced Kāma to ashes; he will get a new body, according to *Kumārasambhava*, 4, 42, at the wedding of Śiva and Pārvatī. But, according to the *Harivaṁśa* (9263 ff.), Kāma was re-born as Pradyumna, Kṛṣṇa's son. The baby had been stolen by Śambara, whose wife Māyāvatī brought him up. The latter, however, was Rati, who had assumed the form of Māyāvatī in order to deceive the Asura, and thus to cause his destruction by Pradyumna (*ib.* 9475 ff.). Apparently Pradyumna is but a variant of Kāma, or, to be more accurate, a god of love popular in those tracts of India where the worship of Kṛṣṇa prevailed. Kāma has also been identified with Māra, the tempter and devil of Buddhist legend: hence, in later Sanskrit, Māra becomes a synonym of Kāma.

Some of the *goddesses* of Brāhmanical mythology have already been mentioned in connexion with the gods whose consorts they are: Svāhā, wife of Agni, Śachī, wife of Indra, Sañjñā, wife of Sūrya. The most important goddess, Pārvatī, will be considered when we come to treat of Rudra. Lakṣmī or Śrī is the consort of Viṣṇu; but she seems originally to have been an independent deity impersonating beauty and wealth. She rose from the ocean when the gods and demons churned it for the production of *amṛta*, and then she was made over to Viṣṇu. But we meet also with different statements: she is the daughter of Bhṛgu and Khyāti, or has been produced from the lotus which grew out of Viṣṇu's forehead; she is the wife of Prajāpati, or of Dattātreya, or of the sun-god, or of Dharma to whom she bore a son Kāma. As the goddess of beauty, she is intimately connected with the lotus, the most beautiful flower of India; she is called after it Padmā or Kamalā; she is enthroned on a lotus, and holds one in her hand. As Fortuna, she is the fickle goddess, who stays nowhere long; according to *Mahābhārata*, xii. 225, 228, she lived once with the Dānavas, then with the gods, and with Indra. From an abstraction Śrī seems to have become a deity, just as occasionally abstract nouns are used as names of gods or goddesses representing the abstract idea in question, *e.g.* Hrī, Dhṛti, Kīrti, etc.

The origin of Sarasvatī was different. From being a river-goddess in the Rig Veda she became the goddess of wisdom and eloquence, and as such she is most frequently invoked by the poets of classical Sanskrit literature. She has been identified with Vāch, 'speech,' and as such she is the wife of Brahmā; she is further identified with Bhāratī, a separate goddess invoked in Vedic hymns. She is also called Śāradā, whom the inhabitants of Kashmir regard as the guardian of their country, hence called Śāradāmaṇḍala (Stein, *Kalhaṇa's Chronicle of Kaśmīr*, ii. p. 286). Poets speak of the hostility of Lakṣmī to Sarasvatī; for wealth and learning seldom go together.

The principal river-goddess of India is the Gaṅgā, who has lent her sanctity, as it were, to

* *Puṇyajana* in classical Sanskrit is synonymous with *yakṣa* and *rākṣasa* (Hemachandra's *Abhidhānakośa*, 187 and 194).

† The genealogy is stated somewhat differently in *Mahābhārata*, iii. 274 f.

many smaller rivers which are fabled to be miraculously connected or identical with her. The Gaṅgā flows in heaven as Viyadgaṅgā or Mandākinī (the milky way), on earth as the most sacred river, and in the lower world as the Pātālagaṅgā; she is therefore called *Tripathagā*, 'going in the three worlds.'

King Bhagīratha, the great-grandson of Sagara, induced the celestial Gaṅgā to come down from heaven to earth and from the earth to the lower regions, in order to purify the ashes of the 60,000 sons of Sagara burnt by Kapila; hence she is called *Bhāgīrathī*. Śiva caught the river up in his matted hair in order to check the impetus of her fall. The river then entered Jahnu's sacrificial enclosure and was drunk up by him; but at last he discharged her from his ear, wherefore she is regarded as his daughter and called *Jāhnavī*. These legends are told at length in the *Rāmāyaṇa*, i. 38–44; another account of her descent is given in the *Mārkaṇḍeya Purāṇa*, ch. 55. Gaṅgā is also said to come forth from the toe of Viṣṇu. In the *Mahābhārata* (i. 98 ff.) she is the first wife of King Śantanu and the mother of Bhīṣma. It has been said above that Kumāra is considered to be her son. Mythologically she is the eldest daughter of Himālaya and Menā.

In conclusion, it may be added that there are several other sacred rivers or river-goddesses; *e.g.* Yamunā (Kālindī) is the daughter of Sūrya, and so is the Tapatī (a younger sister of the goddess Sāvitrī); Narmadā (Revā) is a daughter of the moon.

The *enemies* of the gods are the **Asuras, Daityas,** and **Dānavas.** In the Rig Veda, *Asura* is an epithet of Varuṇa and other gods, which has been rendered 'mysterious being.' But in later times *asura* denotes the enemies of the gods (*sura*), and the word is derived from *sura* with *a* privative, while in point of fact the word *sura* is artificial, and has been abstracted from *asura*. The Asuras are the elder brothers of the gods, both being sons of Prajāpati. They continually waged war with the gods, and frequently got the better of them; some of them even acquired the sovereignty over the whole world, till at last they were slain by Indra, Viṣṇu (hence called *Daityāri*), or some other god. They dwell in the nether world, in magnificent palaces. As enemies of the gods, they are regarded as wicked demons; but, as mere rivals of the gods, they are not necessarily bad. So they have for their teacher and spiritual guide a great saint, Śukra, the son of Bhṛgu, who has been mentioned above in connexion with his antagonist Bṛhaspati, the teacher of the gods. The Asuras occasionally appear in a better light in epic stories, and still more frequently in popular tales. In popular belief they seem to have come to be looked upon simply as superhuman beings, very much like the Vidyādharas; *e.g.* there is a small romantic epic in the *Kathāsaritsāgara* (eighth book), in which they side with the hero of the story. In classical mythology there is no difference between Asuras, Daityas, and Dānavas, and these words are usually synonyms; but originally the Daityas and Dānavas are subdivisions of the Asuras, the former being the sons of Diti, the latter of Danū.

(*B*) We must now speak of *the different groups of divine beings who rank below the gods*. Some of them are, on the whole, not unfriendly to men, others are decidedly wicked, demons or devils. We shall treat first of the former. The most popular class seems to have been the **Nāgas** (Sarpas, Uragas), dragons or snake-gods; and snake-worship prevailed in India from the beginning of the classical period downwards. Nāgas are figured on numberless sculptures all over India, and in popular tales they and their beautiful daughters play an important part. They are, however, almost absent from Vedic literature. In epic and classical literature they are said to dwell in Pātāla, the nether world, which is imagined to be full of marvels; there is situated their city Bhogavatī. At the beginning of the *Mahābhārata* we have what may be called a snake-epos, which relates the destruction of the snakes through the sacrifice of Janamejaya; there are introduced Airāvata, Vāsuki, Takṣaka, Śeṣa and others well known in Sanskrit literature. Śeṣa (Ananta) has been promoted to a higher rank; he is represented as supporting the earth on his expanded hoods, and he has become a servant of Viṣṇu, who rests on him while sleeping on the ocean. Baladeva, the brother of Kṛṣṇa, is believed to be an incarnation of Śeṣa. The snakes are the sons of Kadrū, or of Surasā, one of the divine mothers. It has been related above (under 'sun-god') that Garuḍa is their enemy and devours them, whence it has been concluded that the Nāgas represent darkness which is dispelled by the sun. But there is another aspect of the Nāgas which was more important for the imagination of the people; they were probably regarded as guarding or possessing treasures, and assuming the shape of snakes. The Nāgas were held in awe and reverence, but they were not regarded as demons.

Older than the Nāgas are the **Gandharvas.** They are already known in the Rig Veda, where, however, usually but one Gandharva is mentioned. They are a class of superhuman beings fond of women, and possessing a mysterious power over them. In the *Mahābhārata* they frequently appear very much like the Yakṣas, and their king Aṅgāraparṇa or Chitraratha is a friend of Kubera (whose park is called *Chaitraratha*). But usually they are represented as divine musicians and as living in Indra's heaven; from them the Sanskrit name for 'music,' *gāndharva*, is derived. It may be mentioned that the *fata morgana* is called 'town of the Gandharvas' (*gandharvanagara*).

The mistresses of the Gandharvas are the **Apsarases,** heavenly nymphs of wonderful beauty. They too belong to the court of Indra, and they are employed by him to seduce saints when they become a danger to his sovereignty through their severe penance. The effect of their successful interference is usually the birth of some great man or woman; *e.g.* Menakā seduced Viśvāmitra and became mother of Śakuntalā. In other stories some Apsaras incurs the displeasure of some god, and by his curse is born on, or banished to, the earth, where she marries some great man. Thus Urvaśī became the wife of king Purūravas; their adventures form the story of Kālidāsa's play *Vikramorvaśī*. The most famous Apsarases are Tilottamā, Rambhā, Urvaśī, Ghṛtāchī, Menakā, and others, but there are millions of them, and they are held out as a reward to warriors who fall in battle.

The **Yakṣas,** as a class of superhuman beings, are of post-Vedic origin, though the word *yakṣá* as a neuter occurs in the Rig Veda (on its meaning see *Vedische Studien*, iii. 126 ff.). As *yakṣan* means 'magical power,' *yakṣá* probably means etymologically 'being possessed of magical power'; and this was without doubt the meaning of the feminine *yakṣiṇī*. The original conception of the Yakṣas would therefore be much the same as that of the later Vidyādharas—a word which etymologically and actually means 'possessing spells or witchcraft.' The Yakṣas are brought into close connexion with the Rākṣasas, as stated above under 'Kubera,' though the Yakṣas are generally not unfriendly to men, and the Rākṣasas are. (Still there are instances of wicked Yakṣas and of kind Rākṣasas.) Both Yakṣas and Rākṣasas are also called *punyajana*—a name of the subjects of Kubera in the Atharva Veda. It has been assumed above that there were originally two sorts of Rakṣas; the one, guardians of treasures, were identified with the Yakṣas, and the other are the well-known disturbers of sacrifice usually called Rākṣasas; thus the apparent confusion between Yakṣas and Rākṣasas would become intelligible.

Very much like the Yakṣas are the **Guhyakas.** They too are followers of Kubera; they guard treasures and live in mountain caves. Mythical beings of similar character are the **Kinnaras,** divine songsters, who have a human body and the head of a horse, while the **Kimpuruṣas** have the body of a horse and a human head. Both Kinnaras and Kimpuruṣas are followers of Kubera, and they are frequently identified with one another. The Kinnaras are occasionally confounded with the Gandharvas.

Other classes of mythical beings who are frequently mentioned, but not described in detail, are the **Chāraṇas,** divine panegyrists; the **Siddhas,** beneficent ghosts; and the **Sādhyas.**

The **Vidyādharas** deserve a fuller notice. In the older popular tales, especially in Pāli literature, the Yakṣas are the principal superhuman beings; in the younger popular literature (represented by the *Bṛhatkathā*) they are supplanted by the Vidyādharas, the most human-like of all inferior divine beings. They live under kings and emperors (*chakravartins*) of their own, in towns on the northern mountains, just like men, with whom they have much intercourse and even intermarry. Men can also be received into their community and acquire sovereignty over them. They possess superhuman powers, especially the faculty of moving through the air, and of assuming by their *vidyā*, or witchcraft, any shape at will (whence they are also called *Khechara*, and *Kāmarūpin*). The Vidyādharas seem to have been at the height of popularity during the early centuries of our era; there is a Prākrit poem by Vimalasūri, the *Padmacharita*, which belongs to that time; in it the Rākṣasas, the Yakṣas, the Monkeys, etc., of the *Rāmāyaṇa* are declared to be different tribes of Vidyādharas.

Among the malicious superhuman beings the **Rākṣasas** are the most prominent. In the Rig Veda they are mentioned in the neuter form *rakṣas* as fiends who disturb the sacrifice and injure the pious. They are possessed of enormous power, especially at night, when they prowl about (*rātriñchara*) and devour their victims (*kravyāda*, *kauṇapa*); they are of hideous appearance, but are able to assume different shapes. The Rig Veda seems to distinguish *rakṣas* ('evil spirits') and *yātudhānas* ('ghosts'), but in later language *Yātudhāna* is synonymous with *Rākṣasa*. Originally equal in rank to the Yakṣas, the Rākṣasas have become more conspicuous than in ancient mythology, apparently through the influence of epic poetry. For in the *Rāmāyaṇa* Rāvaṇa, the king of the Rākṣasas, his brothers, etc., are the powerful enemies of Rāma; thus the Rākṣasas were invested with a new personality which they retained in the imagination of the Hindus. In the *Mahābhārata*, Bhīma's son Ghatotkacha is a Rākṣasa who fights on the side of the Pāṇḍavas. He and Vibhīṣaṇa, the virtuous brother of Rāvaṇa, and his successor on the throne of Laṅkā, are instances which prove that the Rākṣasas, like the Asuras, were not always looked upon with unmitigated horror.

Piśāchas are not unlike, and occasionally are confounded with, the Rākṣasas; they are hideous and bloodthirsty monsters who haunt wild and desert places. In the Rig Veda there is once (I. cxxxiii. 5) mention of a Piśāchi, a spirit supposed to be connected with the will o' the wisp; the Piśāchas as wicked spirits frequently occur from the Atharva Veda downwards. It may be remarked that a Prakrit dialect, in which the original *Bṛhatkathā* was written, has been named after them Paiśāchī.*

Bhūta is the most general term for sprites; thus *Bhūtabhāṣa*, the 'language of the Bhūtas,' is synonymous with *Paiśāchī*. But frequently they are mentioned as a separate class, in juxtaposition with other classes of wicked spirits. **Pretas** are the ghosts of the deceased, who are not received among the *manes*. They play a more important part in Buddhist literature than in the Brāhmanical Sanskrit literature. In later times, especially in popular works, they seem to have been supplanted by the **Vetālas,** wicked goblins who haunt cemeteries and animate dead bodies; they belong to the last phase of the development of demonology, inaugurated by the *Bṛhatkathā*, in which the Vidyādharas are the leading figures.

(*C*) We shall now speak of *heroic men*. Most important figures in Brāhmanical mythology are the famous **Ṛṣis** of old, the traditional authors of the Vedic hymns, and ancestral founders of the Brāhmanical *gotras* or gentes. These holy men, saints or sages, were looked upon as possessing superhuman powers which made them almost equal, and in some cases even superior, to the gods. We may distinguish three classes of Ṛṣis: *devarṣis*, i.e. Ṛṣis of the gods or living among them, *e.g.* Nārada; *brahmarṣis*, i.e. priestly Ṛṣis, *e.g.* Vasiṣṭha, and indeed the greatest number of them; and *rājarṣis*, i.e. Ṛṣis of royal origin, *e.g.* Viśvāmitra. Besides, the Ṛṣis belong to different periods: some lived in the beginning of the world and took an active part in creation, as Dakṣa, Kaśyapa, Marīchi; others belong to a more recent period, as Manu, Vyāsa, Vālmīki, etc. An ancient group are the seven Ṛṣis (identified with the seven bright stars of Ursa major); but the names are differently given. The oldest list is: Gautama, Bharadvāja, Viśvāmitra, Jamadagni, Vasiṣṭha, Kaśyapa, and Atri. A common one is: Bhṛgu, Aṅgiras, Viśvāmitra, Vasiṣṭha, Kaśyapa, Atri, and Agastya. From the *Mahābhārata* we get a different list: Marīchi, Atri, Aṅgiras, Pulaha, Kratu, Pulastya, and Vasiṣṭha. The stories and legends of which the Ṛṣis are the heroes, or in which they play an important part, are very numerous, especially in the Epics and the *Purāṇas*, far outnumbering the myths told of the gods.

The ideas entertained about the Ṛṣis have changed considerably in the course of time in correspondence with the change of the religious ideal. Originally they owed their exalted position to the fact that they were believed to have revealed the sacred lore, the whole of Vedic religion, which, it will be remembered, is concerned chiefly with sacrifice. But in the epic period the sacrifice was no longer the religious ideal; it had been supplanted by *tapas* or *yoga*, 'asceticism,' in the opinion of the people at large. Therefore the Ṛṣis began to be regarded less as experts in the sacrificial art than as great ascetics, who by means of severe austerities and deep meditation had acquired superhuman power and such sanctity that their utterances were infallible and their curses must take effect. In popular opinion they are *yogins* rather than priests; they are saints and sorcerers at the same time; but, of course, elevated to the highest rank.

3. **The three Supreme Gods—Brahmā, Viṣṇu, and Śiva**—occupy a peculiar position in the Hindu pantheon, highly exalted above the rest of gods and divine beings. A detailed description of them would be out of place in the present article. In a sketch of Brāhmanical mythology only the causes and processes by which they were promoted to the highest rank can be dealt with.

Brahmā, the creator of the world, is the Prajāpati, Pitāmaha, Hiranyagarbha of the Vedas and *Brāhmaṇas*. He had his origin and basis in speculation rather than in popular cult, and therefore he did not appeal, in spite of his sublime character, to

* Pischel, 'Grammatik der Prakrit Sprachen,' *GIAP* i. 8, p. 27 f.; Lacôte, *Essai sur Guṇāḍhya et la Bṛhatkathā*, pp. 40–59.

the religious feelings of the masses. Hence the worship of Brahmā has become all but extinct, and the worshippers of Śiva or Viṣṇu, in whatever form they adore their favourite deity, form the overwhelming majority of the Hindus. Notwithstanding these sectarian tendencies, the three Supreme Gods are regarded, in principle, as of equal dignity and forming as such a kind of triad, which in the doctrine of the *Trimūrti* has been acknowledged since about the 5th cent. A.D. There were contradictory elements already in the conception of the Prajāpati of the *Brāhmaṇas*. For sometimes he is identified with the universe, and described as the source out of which creation evolved; sometimes he is regarded as a secondary deity subordinate to Brahman (Muir, *op. cit.* v. 391 ff.). The same holds good with the Brahmā of later mythology: Brahmā proceeded from Brahman, the First Cause; and, on the other hand, he is, in a vague way, identified with it, whence he is called *svayambhū* ('self-born') or *aja* ('unborn'). The generally received opinion, as given in Manu i. 5 ff., comes to this: Svayambhū rose from primeval darkness, created the waters, and deposited in them a seed; this became a golden egg, in which he himself was born as Brahmā or Hiraṇyagarbha. But, according to another opinion, contained already in the famous *Puruṣasūkta* of the Rig Veda (x. 90), the Puruṣa was in the beginning, and from him the world originated. The deity rising from this Puruṣa is called *Nārāyaṇa* (*i.e.* 'descended from Nara,' the primeval male)—a name which is also coupled with Puruṣa in the *Śatapatha Brāhmaṇa*. Thus Nārāyaṇa is identified with Brahmā (in the above quoted passage of Manu). But usually Nārāyaṇa is identified with Viṣṇu, and thereby Brahmā's claim to paramount superiority was contested. There was still another cause which detracted from Brahmā's significance as creator. For part of the creation, notably of men, gods, and divine beings, was transferred to secondary Prajāpatis: Dakṣa, Marīchi, Atri, and other Ṛṣis whose progeny is detailed in cosmogonic myths and legends of the Epics and the *Purāṇas*. Thus many causes were at work to reduce the importance and dignity of Brahmā and to deprive him of active devotion. The reason which the Hindus allege in explanation of this fact is Brahmā's incest with his daughter Vāch ('speech'), by which the creation was brought about. Still the idea of creation and of fate is personified in Brahmā, and in this character he is universally acknowledged by all classical writers down to modern times.

While Brahmā-Prajāpati retires step by step from the superiority over all gods accorded to him in the *Brāhmaṇas*, the reverse development obtains in the case of Viṣṇu. In the Rig Veda he is not one of the prominent gods; there he is chiefly extolled for the three steps with which he encompassed the universe. But it should be remarked that in the Rig Veda he is intimately associated with Indra as his friend and companion, while in classical mythology he is styled Indra's younger brother (*Indrānuja*). As this kind of relationship is little in keeping with Viṣṇu's paramount rank, it must be regarded as a relic of the preceding period, when Indra was still greatly superior to Viṣṇu; and, at the same time, it seems to indicate a dim consciousness of the fact that a part of Indra's character or functions had been transferred to Viṣṇu. For Viṣṇu becomes in classical mythology what Indra had been before, namely, the slayer of demons, the *Daityāri*. On the whole, however, Viṣṇu's position in the *Brāhmaṇas* is the same as before; he is regarded as the equal of the other gods, not yet their superior. But the *Brāhmaṇas* record only the views of the priests; popular opinion may have differed from theirs, although ignored by them as not worthy of notice (cf. Muir, *op. cit.* iv. 156 ff.). It should, however, be observed that in the *Brāhmaṇas* Viṣṇu is repeatedly identified with the sacrifice—an honour which he shares with Prajāpati. He seems gradually to have usurped some positions formerly occupied by Prajāpati, and thus to have arrogated to himself the superiority which Vedic speculation had assigned to his rival. Thus Nārāyaṇa is, according to Manu, identical with Brahmā, but afterwards Viṣṇu is Nārāyaṇa. In the *Śatapatha Brāhmaṇa* it is said that, 'having assumed the form of a tortoise, Prajāpati created offspring'; and, according to the *Taittirīya Brāhmaṇa*, Prajāpati in the form of a boar raised the earth from the bottom of the ocean (Muir, *op. cit.* pp. 27, 39, 52 f.). But common opinion ascribes these feats to Viṣṇu in his tortoise and boar *avatāras*.

Here we meet for the first time with the theory of incarnations, which in the course of time passed into a generally adopted doctrine, and enabled Vaiṣṇavism to absorb popular cults by declaring the objects of their worship to be *avatāras* of Viṣṇu. Probably the tortoise and the boar were originally popular theriomorphic deities worshipped by the masses (including Brāhmanic families), and were afterwards elevated by the same Brāhmans to a higher rank by assuming them to be forms of some recognised god. Traces of this process seem to be recognizable in the case of the boar and tortoise *avatāras* of Prajāpati. For in the *Taittirīya Brāhmaṇa*, as we have seen, Prajāpati assumed the form of a boar and raised the earth; but, in a passage of the *Śatapatha Brāhmaṇa*, it was the boar Emūṣa who raised the earth, and was then favoured by Prajāpati for his deed. Here we have two different attempts to connect a god worshipped under the shape of a boar with Prajāpati. Something similar occurs in the case of his tortoise *avatāra*; for it is first said that Prajāpati took the form of a tortoise, and then this tortoise *kachchhapa* is identified with Kaśyapa, one of the secondary creators. We observe in both cases a certain indecision: the theriomorphic god was at first *hesitatingly* identified by members of the priestly class with one of their great gods. Afterwards, when the theory of *avatāras* was firmly established, it furnished a ready means of legitimizing popular godlings and heroes. Thus the fish *avatāra* of Viṣṇu and that of the man-lion may be accounted for by the assumption that idols of such shapes had been the objects of popular worship.

The fifth *avatāra* of Viṣṇu as a dwarf (*Vāmana*) is of peculiar interest. For in this incarnation Viṣṇu conquered the world by three steps, for which feat he is chiefly extolled in the hymns of the Rig Veda, although neither there nor in the *Brāhmaṇas* is he said to have done this in the shape of a dwarf. That notion may have developed from the myth itself, for, compared with such *giant* steps, the body of the god may well have appeared *dwarfish*; or there may have been some popular god figured as a dwarf, with whom it was thought convenient to identify Viṣṇu. At any rate, the fact that the principal feat of Viṣṇu was not ascribed to the god himself in his own person, but to an incarnation of him, proves that at the time when this opinion became current Viṣṇu had been promoted to a much higher rank than belonged to the Vedic Viṣṇu who, strange to say, was then regarded as an incarnation (viz. the dwarf) of the Supreme Viṣṇu who was radically not different from him.

The next *avatāras*—Rāma Jāmadagnya, Rāma Dāśarathi, Kṛṣṇa, and Buddha—are of a different kind, and belong to the time when Vaiṣṇavism had become a dominant form of Indian religion, and when the universally received doctrine of incarnation made it possible to imprint on independent cults a Vaiṣṇavite stamp. Rāma Jāmadagnya is the hero of legendary story, the other Rāma of epic history. But it is a well-known fact that in the original part of the *Rāmāyaṇa*, i.e. in Books ii.–vi., Rāma is not yet conceived as connected in any way with Viṣṇu; but after he had become, through epic poetry, the favourite of the people, he was made the object of devotion and worship by being declared to be the incarnated Viṣṇu. In Kṛṣṇa, a Rājput hero has coalesced with a shepherd-god (Govinda) into a new deity; he appears first in the *Chhāndogya Upaniṣad* (iii. 17, 6)

as a human teacher who knew the Brahman; in the *Mahābhārata* he is already acknowledged as Viṣṇu in a human form, though frequently he is still described as a human hero. The worship of Kṛṣṇa-Vāsudeva must have been highly popular about the beginning of our era, for it gave rise to the curious Jaina doctrine of the 9 Vāsudevas, 9 Baladevas, and 9 Prativāsudevas, who play such an important part in the hagiology of the Jainas, even as early as some of their canonical books. And in later times the worship of Kṛṣṇa and that of Rāma are the two prevailing forms of Vaiṣṇavism. The recognition of Buddha as an *avatāra* of Viṣṇu is a proof of the popularity of Vaiṣṇavism and its assimilating energy even with regard to a hostile sect.

Most of the creeds which have been merged into Vaiṣṇavism were of un-Brāhmanical origin; *i.e.* they did not grow out of Brāhmanism, but were in the end brahmanized. The gods, godlings, or heroes, whose cult was the object of those creeds, were probably *gṛhadevatās*, or *iṣṭadevatās*, worshipped by families belonging to various castes and classes, inclusive of Brāhmans; their identification with Viṣṇu, which probably was due chiefly to Brāhmans, elevated them to a higher sphere and ennobled their cult. But what principally legitimized these Vaiṣṇavite forms of religion as Brāhmanical, or as in harmony with the Veda, was the adoption of Brāhmanical theosophy as their theological foundation. Viṣṇu (Nārāyaṇa, Vāsudeva) was declared to be one with the Supreme Spirit, the Brahman of the *Upaniṣads*; the creation and destruction of the world were explained in accordance with the Vedānta and Sāṅkhya philosophies. The ascetic ideal is still acknowledged, and knowledge continues to be regarded as an important means of reaching emancipation; but a new way of salvation is now proclaimed, the 'way of love' (*bhakti-mārga* [*q.v.*]): love of, devotion and entire submission to, God is the shortest and surest way to union with Him. One of the earliest and most perfect products of this movement is the famous *Bhagavad-Gītā* (*q.v.*), which forms part of the *Mahābhārata*; it has become a canonical text for all Vaiṣṇavite sects. A later authority for them is the *Vedānta Sūtra*, which almost every founder of Brāhmanical sects feels obliged to interpret in such a way that its teachings shall be in perfect harmony with his own doctrines.

Rudra-Śiva became in the Brāhmanical period a Supreme God, the highest god according to the Śaivites as Viṣṇu is the highest god according to the Vaiṣṇavites. In the Rig Veda, Rudra (the Howler) is the father of the Maruts or Rudras (wind- or storm-gods), but no distinct cosmical function is ascribed to him; he is principally regarded as a malevolent deity who by his shafts brings disease and death on men and cattle. A plurality of Rudras, the host of Rudras, is frequently mentioned in the following period, and has never been forgotten; in classical mythology the number of Rudras is eleven, but in addition to them Rudra is surrounded by hosts of spirits, called his *gaṇas* and *pramathas*. He thus appears as the leader of troops of beings greatly inferior, yet similar, to himself; it may therefore be assumed that from the beginning he was the representative of a class, or rather classes, of evil spirits, and that the many Rudras whom the *Śatarudrīya* mentions have all been blended in the conception of the one Rudra, who is present in woods, streams, desert places, etc. A similar process seems to have gone on in the later Vedas and the *Brāhmaṇas*; for other terrific gods, notably various forms of Agni, conceived not as the sacrificial fire but as the destructive element, have been combined with the original Rudra. As mentioned above, the *Śatapatha Brāhmaṇa* states that Agni was called *Śarva* by the Prāchyas, and *Bhava* by the Vāhīkas; but in the Atharva Veda, Bhava and Śarva are distinct gods, similar to Rudra, while, as early as the *Vājasaneyī Saṁhitā*, Bhava and Śarva occur as names of Rudra, and in classical literature they are common synonyms of Śiva. It is therefore a plausible conjecture that other names or epithets of Śiva, besides *Bhava* and *Śarva*, originally denoted distinct deities who were blended with him into one great god, Mahādeva. Thus his epithets Nīlagrīva, Śitikaṇṭha, Nīlalohita, of which the two first names occur already in the *Śatarudrīya* of the *Vājasaneyī* and *Taittirīya Saṁhitās*, belong to fire (as first pointed out by Weber, *Indische Studien*, 1850-98, ii. 20), and designate some forms of a fire-god merged in Rudra.

Giriśa and similar epithets of Rudra in the *Śatarudrīya*, which have become names of Śiva in later mythology, seem to indicate that he was identified with the mountain-sprite, or that he absorbed, as it were, into his character the anonymous mountain-goblins born of the imagination of hill tribes in India and other parts of the world. Rudra-Śiva is therefore intimately connected with the mountains, especially with the Himālaya; indeed Megasthenes remarks that Dionysos (Śiva) is worshipped in the hills, and Herakles (Kṛṣṇa) in the plains. His character as god of the mountains may have made him the favourite god of the people of Southern India; but a more potent cause was probably the 'devil-worship' common to all Dravidians, which prepared them for the adoration of Bhūteśa. For he is also the *Bhūteśvara*, the lord of ghosts in general (*bhūtas*), and especially of those who haunt cemeteries. Connected with the latter are the sorcerers, *yogins*, who practise their awful rites in places haunted by such spirits, and were imagined thus to acquire power over them. Śiva is also the master of the yogins as *Yogīśvara*, and hence is believed to practise *yoga*. The garland of skulls which Śiva wears, the corpse on which he is seated, the terrific shape in which he is adored as Mahākāla, the destructive god of time, death as well as the vanquisher of death (*Mṛtyuñjaya*)—all these items are so many indications that Śiva was regarded first as the ruler, and then as the representative of the vast and various classes of demonic beings who were created in the imagination of the superstitious by the fear and awe inspired by everything relating to death and the dead.

Though the concept of Rudra-Śiva seems to have had an almost unlimited power of assimilating, and thereby absorbing, kindred spirits and godlings of the popular creed, still gods of a well-defined personality or of distinct functions were not subject to this process of assimilation, however like they might be to Śiva in character and perhaps even in origin. Thus Kumāra and Gaṇeśa, notwithstanding their striking affinity with Śiva, have not been merged in Mahādeva.

It will have been remarked that most of the elements which coalesced with Rudra were malicious spirits; still Śiva is not an exclusively malignant deity. Probably it was thought that as leader and king of those spirits he might be appeased, and thus the harm apprehended from his subjects be averted, just as a chief of robbers is bought off by blackmail (Rudra is called 'lord of robbers' in the *Śatarudrīya*). Therefore he is given auspicious names as *Mṛḍa* (cf. Pāṇini, iv. 1, 49) and *Śiva*, 'the Gracious'; the latter has become the most usual name in classical mythology.

Finally, mention must be made of a prominent feature of the Śiva-cult, viz. that he is worshipped under the form of the *liṅga* or *phallus*. It can hardly be doubted that phallic worship was once a wide-spread popular cult in India, but how it came

to be connected with Śiva we are at a loss to understand. But a curious mythological parallel may be noticed in this connexion. Śiva impersonates death as *Mahākāla*, but he is also the vanquisher of death as *Mṛtyuñjaya*; similarly he impersonates the generating power worshipped in the *liṅga*, but he also destroys the god of sexual love, Kāma.

Śiva's consort, Rudrānī or Mṛḍānī, is known by many names, as Devī, Umā, Gaurī, Pārvatī, Durgā, Bhavānī, Kālī, Kapālinī, Chāmuṇḍā. Unlike the wives of other gods, she is a very prominent figure in classical mythology, and may be said to be scarcely inferior to Śiva himself. Her equality of rank with her husband is naively expressed in the dual form of this divinity, the *Ardhanārīśvara*, of which one half is male and the other female, representing the right side of Śiva and the left of Devī. The great number of names of this goddess and the diversity of her character (benignant, awful, cruel, horrible) render it probable that, like Śiva, she is a combination of many deities. One of her names, *Kumārī* (Kanyakumārī in *Taittirīya Āraṇyaka*, 10, 1, 7),—after which the southernmost point of India, Cape Comorin, is supposed to have been called since the time of the Periplus,—seems to be given her as a female counterpart or equivalent of Kumāra, probably as the representative of the Kumārīs who ensnare little children. Malignant spirits are of both sexes; the representative of female sprites must be a goddess, as they could not well coalesce with a male deity. Therefore, if Kumāra be the representative of the Kumāras, Kumārī may be assumed to be the representative of the Kumārīs. Similar may have been the origin of Ambikā, who in the *Vājasaneyī Saṁhitā* is called the sister of Rudra, but in later mythology is Śiva's wife; for *Ambikā* means 'little mother'; and there are superhuman beings, both benignant and malignant, called 'mothers' (*mātaras*), who are connected with Kumāra; therefore Ambikā may be assumed to be the representative of the mothers, just as Kumārī is that of the Kumārīs.

As Śiva is Lord of the Mountains (*Giriśa*), so is his spouse Lady of the Hills (*Pārvatī*). According to classical mythology, Śiva married Umā, daughter of Himālaya; but in the *Kena Upaniṣad*, where she is first mentioned (iii. 25), Umā Haimavatī appears as a heavenly woman, conversant with Brahman. Apparently she was originally an independent goddess, or at least a kind of divine being, perhaps a female mountain-ghost haunting the Himālayas, and was later identified with Rudra's wife. A similar mountain-goddess had her home in the Vindhyas; she was of a cruel character, as might be expected from a goddess of the savage tribes living in those hills. Her name is Vindhyavāsinī, and she too is identified with Śiva's wife. Other names of the latter indicate some connexion with Agni (as was first pointed out by Weber, *Indische Studien*, i. 237, ii. 188 f.), for Kālī and Karālī are names of two of the seven tongues of Agni (*Muṇḍaka Upaniṣad*, i. 2, 4); and these seven tongues of Agni may be assumed, with some probability, to have been originally female demons representing fire as the destructive and voracious element, since they are also names of Durgā as the object of a bloody sacrificial worship. Finally, a plausible guess of Weber with regard to Durgā may be mentioned. He is of opinion that this goddess is connected somehow with Nirṛti, the Vedic goddess of all evil, by which assumption the terrific character of Durgā would be accounted for. At any rate, it can scarcely be doubted that several goddesses or female demons from different parts of India, and worshipped by different classes of people, have in the course of time been combined into one great goddess, the spouse of Śiva, who was adored as his *śakti*, or 'energy.' In the case of Śiva and Devī the syncretistic tendency of mythology as a most powerful factor in the formation of Indian gods is beyond question; but the same factor has also been at work, as we saw above, in the case of the sun-god, of Kumāra, and perhaps of Gaṇeśa.

The cult of Rudra-Śiva and of his consort, originally, perhaps, chiefly the property of tribes loosely or not at all connected with Brāhmanical society, has in course of time been fully brahmanized, in the same way as the cult of Viṣṇu and his *avatāras*, by being based partly on the doctrines of the Upaniṣads, partly, however, on independent systems of Śaiva philosophy. Thus the worship of the two Supreme Gods, Viṣṇu and Śiva, under a great variety of shapes, represents the highest form of religion of Brāhmanical India; but at the same time some sects claiming to worship the same Supreme Gods are addicted to debauchery and gross immorality, and thus exhibit religion in its most degraded form.

In conclusion, it may be remarked that we have left out of sight the great un-Brāhmanical religions, Buddhism and Jainism, which must be treated in separate articles; yet it cannot be doubted that they have in many ways influenced Brāhmanism. Buddhistic ideas, especially, have been adopted and adapted by Brāhmanical thinkers and religious men, and they survived in their systems and creeds long after Buddhism itself declined and decayed in India.

Besides the elements of religious life described in this article, there were other social forces at work which had a great influence upon the development of Brāhmanism, viz. the system of caste and the organization of the family. But as these subjects have an interest of their own, distinct from their religious aspect, they must be treated in separate articles.

BRĀHMA SAMĀJ.—I. Introduction.—The Brāhma Samāj (*Brāhma Samāja*) is a theistic reforming movement, springing from Hinduism, which appeared in Calcutta about eighty years ago, and has had rather a changeful and eventful history, in the course of which it has exercised a large influence in Bengal and slighter influence in other parts of India. The name, 'Brāhma Samāj,' is a Bengali phrase which may be translated 'Society of Brahman,' *Brāhma* being an adjective formed from *Brahman*, a neuter substantive used in Hindu philosophical language for 'God,' whether conceived as the impersonal Divine Being of the stricter Vedānta or the personal God of Rāmānuja's system. *Samāj* usually means a society that is an organism rather than a mere association. The name shows that the movement has close connexions with the religious past of India. This is true, first, in the sense that much that has been taught in the Samāj has come straight out of ancient Hinduism; and, secondly, in the sense that it is but one of the latest of a very long series of attempts to produce a pure spiritual religion which mark Hindu history almost from the beginning.

The Upaniṣads themselves are the deposit of the first great movement in the direction of pure spirituality. The Vedānta and Yōga systems and the theistic sects known as Bhāgavatas, Pāśupatas, and Pāncharātras followed; and the *Bhagavad-Gītā* is the expression of a similar movement in Kṛṣṇa-worship. The modern *Bhakti* movements both in North and in South India, with their literature in the various vernaculars, had similar ends in view. But the impact of Europe, and especially of Christianity, started new currents of religious thought of great force during the 19th century. Of these the earliest is the Brāhma Samāj. Later came the Ārya Samāj (*q.v.*) and other movements of less importance. Towards the close of the century there came a great revival of orthodox Hinduism. The Brāhma Samāj is not only the earliest of the group, but is also a much more direct and legitimate result of Christian influence than the others.

2. History of the movement: antecedents.—Ram Mohan Ray (*Rāmamōhana Rāi*) (1772–1833), who founded the Brāhma Samāj, was the son of a Bengali Brāhman landowner, and received, in addition to the ordinary school education in Bengali, a thorough training in Persian and Arabic, which brought him into contact with Muhammadan thought. Consequently, when he was only fifteen years of age, his outspoken condemnation of idolatry led to his having to leave his father's house. He travelled in Tibet learning Buddhism, settled at Benares to master Hinduism, and, finally, through the study of English and intimacy with an Indian civilian named Digby, became acquainted with Christianity. Thereafter, in 1804, he gave expression to his religious convictions in a pamphlet in Persian, *Tuḥfatul Muwaḥḥiddīn*, 'a Gift to Deists.' It is a brief and arid argument against all formal religions, and in favour of deism. For some ten years after this he held a financial position under Government, and gave most of his energy to his duties, amassing a fortune for himself the while; yet he continued his religious inquiries and discussions in his leisure, and suffered a good deal of persecution in consequence.

In 1814, now a man of forty-two, he left the service of the Company and settled in Calcutta. Fourteen years of varying experimental effort followed—effort spent in the study of Hindu philosophy and Christianity, in the publication of pamphlets and books, and in struggles for social reform. Shortly after settling in Calcutta, he established (in 1815) the *Ātmīya Sabhā*, or Spiritual Association. Meetings were held weekly, at which texts from the Hindu Scriptures were recited, and hymns composed by Ram Mohan and his friends were chanted; but the society did not last long. He published translations of the *Vedānta-sūtras* and of certain Upaniṣads, in Bengali and English. Then followed, in 1820, *The Precepts of Jesus, the Guide to Peace and Happiness*, being a catena of passages from the teaching of Jesus. It is as deplorable as it was inevitable that Christian missionaries should have condemned this most remarkable work, pregnant as it was with prophecy for the religious future of the Hindu people.

Ram Mohan early made the acquaintance of the Serampore missionaries, and indeed gave them both advice and help in the translation of the New Testament into Bengali. Questions arose as to the meaning of certain passages, and collaboration ceased; but one of the missionaries, the Rev. W. Adam, sided with Ram Mohan, and finally became a Unitarian. In consequence of this a Unitarian Committee was formed in Calcutta, consisting of four Indians and six Europeans; and Adam became the pastor and missionary of the society. A house was rented, and Unitarian services were conducted in it in English. A press was founded, and a good deal of literature was put into circulation. Educational methods were also used. Ram Mohan found most of the money required for the work. These efforts were carried on for several years, but with little success. The attendance at the services dwindled to almost nothing; and in the other parts of the work Ram Mohan's autocracy rendered Adam's position practically impossible. The Mission collapsed.

3. First period, 1828–1841: Ram Mohan Ray: Deism.—The failure of the Mission was the occasion of the birth of the Samāj. At the suggestion of two friends, Ram Mohan decided to start an Indian service. A house was rented in Chitpore Road, and the first meeting was held on 20th August 1828. The name at first was *Brāhma Sabhā*, but it was soon altered to *Brāhma Samāj*. Besides Ram Mohan himself, the leading spirits were, first the wealthy triumvirate, Prince Dwarka Nath Tagore (*Dvārakanātha Thākur*), Kali Nath Ray of Taki, Jessore (*Kālinātha Rāi*), and Mathura Nath Mullick of Howrah (*Mathuranātha Mullick*), and then Prasanna Kumār Tagore (*Prasannakumāra Thākur*), Chandra Sekhar Deb (*Chandrasekhara Deva*), and Ram Chandra Bidyabagish (*Rāmachandra Vidyāvāgīśa*). The society met every Saturday evening from 7 to 9. The service was divided into four parts: the recitation of texts from the Vedic hymns, the reading and translating into Bengali of passages from the Upaniṣads, the delivery of a sermon in Bengali, and the singing of hymns accompanied with instrumental music. Only Brāhmans were allowed to lead in the service. Two Telugu Brāhmans were set apart for reciting the hymns, while Utsabananda Bidyabagish (*Utsavānanda Vidyāvāgīśa*) was appointed to read from the Upaniṣads, and Ram Chandra Bidyabagish to translate them into Bengali.

The attendance from the outset proved satisfactory, there being usually sixty or seventy persons present. Ram Mohan insisted that the worshippers should wear suitable dress, and went so far as to prescribe a definite costume. The utmost care was taken to keep the whole proceedings within the bounds of Hinduism. The Vedas were chanted from a sort of ante-chamber, so that they might not be polluted by contact with the vulgar. This was not merely a diplomatic move. The leader was deeply impressed with the need of making the movement genuinely national, and he believed he was restoring Hindu worship to its pristine purity. Yet now, as before, his advocacy of spiritual religion brought him much opposition and persecution. The new society had a very loose organization: there were the four reciters and a secretary, but there were no conditions of membership. The finances were found partly by subscription, the rest being supplied by Ram Mohan himself and the Prince.

It is plain on the very surface that the movement was largely inspired by Christianity. The weekly congregational worship (now first introduced into Hinduism), consisting of the reading of the Scriptures, a sermon, and the singing of hymns, is quite sufficient proof. Prayer seems to have had a very subordinate place, if it had any place at all, in the service; but that is sufficiently explained by Ram Mohan's deistical turn of mind, and by the absence of prayer from the Hindu philosophical systems.

Already the forces of reaction were organizing themselves against Ram Mohan. To fight the *Brāhma Sabhā* and Ram Mohan's social crusade, the *Dharma Sabhā*, or Religion Association, was formed, and a newspaper was published to support the orthodox cause.

Very soon after the founding of the society a site was bought in Chitpore Road, and a building, specially designed for the use of the Samāj, was erected. It was opened on the 23rd of January 1830, a date which has ever since then been celebrated annually by all Brāhmas with great enthusiasm. The Trust Deed of the building is rather a remarkable document. The following extract will be read with interest:

'To be used . . . as a place of public meeting of all sorts and descriptions of people without distinction as shall behave and conduct themselves in an orderly sober religious and devout manner for the worship and adoration of the Eternal Unsearchable and Immutable Being who is the Author and Preserver of the Universe but not under or by any other name designation or title peculiarly used for and applied to any particular Being or Beings by any man or set of men whatsoever and that no graven image statue or sculpture carving painting picture portrait or the likeness of anything shall be admitted within the said building . . . and that no sacrifice . . . shall ever be permitted therein and that no animal or living creature shall within or on the said premises be deprived of life . . . and that in conducting the said worship and adoration no object animate or inanimate that has been or is . . . recognized as an object of worship by any man or set of men shall be reviled or slightingly or contemptuously spoken of . . . and that no sermon preaching discourse prayer or hymn be delivered made or used in such worship but such as have a tendency to the promotion of the contemplation of the Author and Preserver of the Universe to the promotion of charity morality piety benevolence virtue and the strengthening the bonds of union between men of all religious persuasions and creeds.'

Religion was the chief, but by no means the only, interest of Ram Mohan's active mind. He was an eager social reformer, and worked hard against polygamy, and in favour of the marriage of Hindu widows. But no social question stirred him so much as *satī*, the burning of Hindu widows. For the abolition of this inhuman custom he wrote and spoke and toiled for many years, and finally had the joy of seeing it put down by Lord Bentinck on the 4th of December 1829, six weeks before the opening of the Brāhma building.

Now that the battle against *satī* was won, and the Brāhma Samāj not only established but comfortably housed in a building of its own, Ram Mohan thought he might safely carry out his long meditated plan of a voyage to England. He had written to his friend Digby about this project as early as 1817. Many reasons would unite to urge him to go. Realizing to the full the meaning of the introduction of Christianity and of European thought and method into India, he was naturally most eager to see with his own eyes the land and the people which were destined to help so largely in the rejuvenation of his own. There were also a number of questions on which he hoped to influence the Government at home, notably the great problem of the renewal of the Charter of the East India Company. The old Emperor of Delhi, now a pensioner of the Company, wished him to plead his cause with the home authorities, and with this in view gave him the title of *Rājā*. Ram Mohan undertook the task.

Before sailing for England in November 1830, Ram Mohan appointed three trustees to look after the Samāj: Mahārājā Ram Nath Tagore, Kali Nath Munshi, and his own son, Radha Prasad. Visambar Das became secretary. The services were conducted as before; only the day of meeting was changed from Saturday to Wednesday; and this rule obtains in the old building to this day. In arranging to cross the ocean, Ram Mohan took great care to preserve his caste. He took two Hindu servants with him, one of them being required to cook his food in accordance with caste regulations.

Ram Mohan, now Rājā Ram Mohan Ray, was received in England with the greatest warmth and honour by the public generally, by leading Unitarians and other religious men, and by the chief statesmen of the day. He exercised a much greater influence than he could have ever hoped to do; and at the same time came into such close living touch with the best in English life as to be deeply influenced himself. But, to the great sorrow of his friends, he was taken ill, and died at Bristol on the 27th of September 1833.

He was a man of unusually wide sympathies and of large judgment. He realized, as very few men did in his day, the immeasurable results that were destined to flow from the association of England with India, and believed that India would reap very great good therefrom. He also looked forward to India's becoming a Christian country: the exact meaning of this prophecy is discussed below. On the other hand, he realized to the full that no real blessing could come to India by the mere adoption of Western things unchanged. India, he said, would inevitably remain Indian. No gift from the outside could be of any real value except in so far as it was naturalized. His long bold struggle, on the one hand, for religious and social purity, for educational progress and journalistic freedom, and his brilliant literary work and unchanging fidelity to Indian ideals, on the other, had made him not only the most prominent of all Indians, but the one man able to stand between Indians and Englishmen as interpreter and friend.

His death caused dismay in the infant Society which he had left behind in Calcutta, and many of those who at first took part in its work fell away. Prince Dwarka Nath remained a staunch friend, but the chief stay of the whole work was Ram Chandra Bidyabagish, who took charge of the services. Yet the cause steadily decayed. Had it not been for the liberality of the Prince, the current expenses could not have been met.

In 1838, however, five years after the great leader's death, Prince Dwarka Nath's youthful son, Debendra Nath Tagore (*Devendranātha Thākur*) passed through a very decided spiritual change, which made him a consecrated man for the rest of his life. He was then twenty years of age. Next year he gathered a few serious-minded young men round him and formed the *Tattvabōdhinī Sabhā*, the 'Truth-learning Association.' They met once a week in his house for the discussion of religious questions, and once a month for worship.

4. Second period, 1841–1865: Debendra Nath Tagore: Indian theism.—In 1841, Debendra and his friends joined the Brāhma Samāj, and the young man was soon recognized as leader. Then the tide turned, and a new period of growth and fruitful labour opened for the Samāj. The *Tattvabōdhinī Sabhā*, however, was not merged in the Samāj, but continued to do most valuable work as its auxiliary for many years. A Vedic school, the *Tattvabōdhinī Pāthsāla*, was opened, to train young men as Brāhma missionaries, but also with a view to arrest the progress of Christianity, now making considerable headway in Calcutta under Duff's leadership. From beginning to end Debendra wished to be a Hindu, and, unlike Ram Mohan, believed that India had no need of Christ. In 1843 the society's monthly paper, the *Tattvabōdhinī Patrikā*, the 'Truth-learning Journal,' began to appear. It was edited by a friend of Debendra, Akshay Kumār Dutt (*Akshāyakumāra Datta*), one of the greatest of Bengali prose-writers, and soon became a very influential paper, leading many thinking men towards the main ideas of theism.

Debendra saw that the Samāj required to be more carefully organized; that, if it was to be a permanent and growing influence, it must have a regularly appointed ministry and definite rules of membership. By the end of 1843 he had drawn up what is known as the Brāhma Covenant, a short series of solemn vows to be taken by all who

wished to become members of the Samāj. The most important of these vows were promises to abstain from idolatry and to worship God by loving Him and by doing such deeds as He loves. The old reciter, Ram Chandra Bidyabagish, was now formally set apart as *āchārya*, i.e. 'minister'; and Debendra and twenty of his friends solemnly took the vows of the Covenant before him. The conscientious observance of these vows involved a good deal of trouble and difficulty. Debendra himself had to leave the paternal mansion and wander in the fields when any of the domestic ceremonies were being performed, as they were full of idolatry. At the same time a brief form of prayer and adoration, known as *Brahmōpāsana*, *i.e.* 'worship of Brahman,' was compiled, and became the norm for the services. This introduction of prayer is a most noteworthy point.

The work of the Vedic school began to bear fruit. By 1844, Debendra was able to send out a number of young missionaries, and *samājes* began to appear outside Calcutta. From time to time Debendra himself also travelled and preached in the chief towns of the north, from East Bengal to the Panjāb. By the year 1847 the number of covenanted Brāhmas had grown to 647.

The Samāj tended to become a Vedic sect. In 1845 the *Tattvabōdhini Patrikā* declared that the Vedas were the sole foundation of their belief; and in 1846, Debendra said: 'We consider the Vedas, and the Vedas alone, as the standard of our faith.' But many serious questions arose about the text, the interpretation, and the inspiration of the Vedic hymns and the Upaniṣads. Duff had twitted Brāhmas with believing in the infallibility of the Vedas. Consequently four scholars were deputed to go to Benares so that each might study and copy one of the four Vedas and might return to Calcutta with the fruit of his labours.

Debendra steeped himself in the Upaniṣads, and compiled from them in 1850 a volume of extracts for use in the services of the Samāj. This volume, named *Brāhma Dharma*, 'Religion of Brahman,' contains what is known as the *vīja*, or 'seed,' a brief outline of Brāhma doctrine in four statements; the *Brahmōpāsana*, or order of service; and then a selection of passages from the Upaniṣads, followed by passages from other Hindu books. Later an exposition of Brāhma doctrine was added by Debendra.

Meanwhile the results of the labours of the four Vedic students had become available. After much discussion the doctrine of the infallibility of the Vedic literature was abandoned, and it was decided that only those parts were to be accepted as true which harmonized with pure theism. As Keshab Chandra Sen afterwards said, 'The Vedas were thrown overboard by Babu Debendra Nath Tagore, and the Brāhma Samāj bade farewell to Vedāntism.' This happened in 1850. The Samāj thus found itself without an authoritative sacred standard, and was thrown back on natural religion. This raised the whole problem of religious knowledge. At first no definite theory was advanced, but within a few years the leaders found it possible to express themselves; and the Brāhma doctrine came to be this, that our knowledge of God has two sources, *Nature* and *Intuition*.

The faith of the Samāj at this time may be summed up in the following six propositions:

(1) God is a personal being with sublime moral attributes.
(2) God has never become incarnate.
(3) God hears and answers prayer.
(4) God is to be worshipped only in spiritual ways. Hindu asceticism, temples, and fixed forms of worship are unnecessary. Men of all castes and races may worship God acceptably.
(5) Repentance and cessation from sin is the only way to forgiveness and salvation.
(6) Nature and Intuition are the sources of knowledge of God. No book is authoritative.

It is noticeable that the doctrines of the Fatherhood of God and the immortality of the human soul had not as yet found their way into the creed.

The Samāj had proved itself a progressive movement; but circumstances were now approaching which were destined to accelerate the rate of progress for a time. In 1857 a young man named Keshab Chandra Sen (*Keśavachandra Sena*) joined the Samāj. He was not a Brāhman, but belonged to an influential and well-to-do family of the Baidyā caste and of the Vaiṣṇava sect of Hinduism, and he had received a good modern education. He had suffered from religious melancholy, but through prayer had found peace. For two years he took no active part in the work, but from 1859 he threw himself into it with great energy. Keshab Chandra Sen had to endure serious persecution for the sake of his faith. Debendra took a great liking to this gifted young man, while Keshab looked up to Debendra with love and reverence. From this time they enjoyed five years of strenuous, yet happy and harmonious, work together.

The Brāhma Vidyālaya, or School, was opened—a sort of informal Theological College. Keshab lectured in English on the philosophy of Theism, while Debendra discussed in Bengali the theology of the Brāhma Samāj, with the double result that Brāhma doctrine was more clearly formulated, and a number of young men received a very useful theological training. Keshab's capacity as a lecturer in English became known, so that he frequently addressed audiences both of Brāhmas and of others in Calcutta, in English, and occasionally took a tour in the country.

The year 1860 produced large results in social reform. Keshab formed the *Saṅgat Sabhā*, or 'Friendly Association,' the meetings of which were now devotional, now given up to the discussion of pressing questions both religious and social. The findings of this enthusiastic group of young men greatly influenced Debendra himself. As a result of the reasons urged by them, he gave up wearing the sacred Brāhmanical thread. He also took up the whole question of domestic ceremonies. Every noticeable event in Hindu family life is marked by the careful performance of ancient traditional rites, all of which are tainted with references to the gods of Hinduism and with idolatrous practices. Debendra set to work to purge his own family of idolatry; and also worked out, for the use of the Samāj, new or modified rites whence everything heathen and idolatrous had been eliminated. These are known as Brāhma rites; the manual is the *Anushṭhān Paddhati*; and Brāhmas who use them in their families are known as 'Anushṭhānic Brāhmas.' At Keshab's suggestion the Samāj also began to follow the example of Christian philanthropy, and gathered money and food for the famine-stricken.

After leaving college, Keshab had obtained a post in the Bank of Bengal. In 1861 he gave this up in order to devote his whole time and energy to the work of the Samāj. Several of his followers belonging to the *Saṅgat Sabhā* followed the example of his self-sacrifice, among them his life-long friend and biographer, Pratāp Chandra Mozoomdār (*Pratāpachandra Majumdār*). The *Indian Mirror* was started, that the movement might have an English journal for the expression of its views; and the Calcutta College was founded—the earliest attempt made by a native of India to found a college for English education.

Next year (1862) Debendra resolved to honour his brilliant young friend by giving him the place in the Samāj which his great capacities deserved. Hitherto only Brāhmans had been

allowed to lead in the services; and while Debendra himself was the *āchārya*, or 'minister,' the other two who took part in the services were called *upāchāryas*, or 'under-ministers.' Debendra decided to ordain Keshab, non-Brāhman though he was, and to give him the full title *āchārya*. It was also arranged that henceforward no 'minister' should be allowed to wear the sacred thread. The steady pressure of rational principles, urged largely in the *Saṅgat Sabhā*, had brought Debendra to this notable advance. Keshab had to struggle and to dare before he succeeded in being allowed to bring his young wife, in defiance of all Hindu custom, to the solemn service in which he was set apart as *āchārya*; but his courage produced fruit, for from this time Brāhmas began to give their wives more liberty, and the uplifting of the women of India was thus helped onward. From this time Debendra was known as the *pradhān āchārya*, or 'chief minister.'

Two years later, Keshab took a more extended tour. Among other places he visited Bombay and Madras, and was received with so much honour and enthusiasm that he was able to draw men out who afterwards founded *samājes* in these great cities. His brilliant success on this tour, and the wide outlook which the journey gave him, first suggested to his mind the idea of a Society representing the whole of India—a Brāhma Samāj of India.

But the pace at which affairs were moving was too fast for some of the older members, and Debendra himself began to be afraid that Keshab and the other progressives would lose spiritual religion in their zeal for change. As we have seen, Debendra had gone a long way in the matter of reform; yet there were several points on which his Hindu prejudices had not given way. He disliked intercaste marriages, and he could not endure the marriage of widows. Then the two men looked at the whole matter from different points of view. Debendra regarded social questions as secondary in comparison with religion, and wished to initiate no change unless it was absolutely necessary. This explains his unwillingness to drive men by regulation to give up the sacred thread.* Keshab, on the other hand, saw clearly that the social health of the people demanded radical change. There were also religious differences. Debendra's was a deeply devotional nature, but he was still Hindu in temperament, and the great facts of sin and repentance did not obtrude themselves much in his prayers or his teaching; while Keshab was keenly alive to the ethical side of religious experience, and was daily coming more under the influence of Christ.

During Keshab's absence on his long tour, the more conservative spirits gained an increasing hold of Debendra; two parties began to appear more distinctly in the Samāj, and suspicion was soon rife between them. Attempts were made to heal the breach, but without result. Debendra was determined to resist Keshab. The cyclone of 5th Oct. 1864 so damaged the building that it became necessary to hold the services in Debendra's house, and he took the opportunity to allow *upāchāryas* wearing the sacred thread to officiate.† Keshab and his party protested, but received no satisfaction. Finally, they sent Debendra what was really an ultimatum. It contained three points, but only one had any significance, viz. the old demand that no man wearing the sacred thread should be allowed to lead the devotions of the Samāj. Debendra felt it to be his duty to refuse; and Keshab and his party withdrew, leaving all the property of the Samāj behind them. The date was Feb. 1865. Keshab was only twenty-seven years of age, and Debendra, who had already been a religious leader for twenty-four years, was only forty-seven. He had still forty years of life before him. At this time there were only a few *samājes* in existence outside Calcutta.

5. **Third period, 1865–1878: Keshab Chandra Sen: universal theism: the two Samājes.**—Keshab did not organize a new Samāj at once, but spent some eighteen months in seeking to rally sympathy and supporters to his cause. He had carried the *Indian Mirror* with him. He started a vernacular paper called *Dharma Tattva*, 'the Truth of Religion,' in opposition to Debendra's paper, the *Tattvabōdhini Patrikā*. Both were used vigorously in favour of his party. He toured in East Bengal and lectured in Calcutta. Early in 1866 a copy of Seeley's *Ecce Homo* fell into his hands, and greatly stimulated his thought. He was already deeply impressed by Christ; this made his heart overflow. He delivered a lecture on 5th May in the theatre of the Medical College on 'Jesus Christ: Europe and Asia.' It is no theological discourse, but a manly appeal to his fellow-countrymen and to Europeans to listen to the teaching of Christ and to imitate Him. The most notable point in the address was the calling of attention to the fact that Jesus was an Asiatic. Keshab got at the heart of his audience by the appeal founded on that telling fact. He speaks of Christ's 'extraordinary greatness,' His 'supernatural moral heroism'; but nowhere does he depart from the strictest theistic position. Yet the enthusiasm for the character of Christ and the very high estimate of His influence which the lecture expressed led many to believe that Keshab was about to become a Christian. At least one young man was won by this lecture to the spiritual life, and afterwards to the position of a Brāhma missionary—Pyari Mohan Chundhuri.

On 11th Nov. 1866 a meeting was held to form the new society. It was opened with a rather startling religious service. Besides the usual prayer and hymns, it included the reading of passages from the Hindu, Christian, Muhammadan, Zoroastrian, and Confucian Scriptures. Keshab's distinctive ideal, the rising above the limitations of the Hindu system to a rational faith which should give complete social and intellectual freedom, was thus set forth in a way which no one could misunderstand. His immediate object, however, was to receive the adhesion of all Brāhmas in every part of India to the organization which he proposed to form. Hence the following resolutions, which were put to the meeting and carried unanimously:

(1) That the Brāhma Samāj of India be established for the admission of all Brāhmas, and for the wide propagation of the religion.
(2) That this association be bound to preserve the purity and universality of its religion.
(3) That people of both sexes, believing in the fundamental principles of Brahmaism, shall be admissible as members.
(4) That mottoes and maxims agreeing with the principles of Brahmaism be gleaned and published from the religious writings of all nations.
(5) That a vote of thanks be given to Debendra Nath Tagore for the unflagging zeal he has ever exhibited, and the indefatigable labour he has undergone for promoting the progress of the religion.

Keshab was appointed the secretary of the Samāj, and the further organization was left altogether in his hands. From this date onward, then, we have two societies—Debendra's organization, hereafter known as the *Ādi Brāhma Samāj*, or original society, and Keshab's new body, the *Bhāratvarshiya Brāhma Samāj*, or Brāhma Samāj of India.

* The equivocal position of Debendra's family makes his defence of caste practice the more piquant. They have Brāhman birth, wealth, and high character; yet they are known as *Pirālī* Brāhmans, for the family was outcasted long ago on account of some contact with Muhammadanism.

† Pratap puts this event in 1865, Lemard's chronology would put it in 1863, but the cyclone gives us the true date.

As to the balance of the two parties, Mr. P. C. Mozoomdar writes: 'The Pradhān Āchārya had a number of elderly adherents, and his accomplished sons, some of whom were of the same age as Keshab, helped his cause energetically. But there is no doubt that Keshab's enthusiasm and genius drew all the youth and intelligence of the community, and his important reforms attracted the sympathy of influential outsiders.' The new organization won to itself many earnest men hitherto unattached to the Samāj, including a number of outstanding personalities whom Keshab had influenced during his tour in Bombay and Madras.

In accordance with the fourth resolution as given above, a selection of texts from the Hindu, Buddhist, Jewish, Christian, Muhammadan, and Chinese Scriptures was made and published, in 1866, under the title *Ślōkasaṅgraha*, i.e. 'A Collection of Verses,' for use in the service of the Samāj.

As Keshab's party did not yet possess a building of its own, weekly services were held in his house in Colutola Street. The closer relation which the new body sustained to Christianity was indicated in these services being now regularly held on *Sunday*; while, to show their continued sympathy with the old Samāj, the leaders still attended the weekly service there on Wednesday.

One of Keshab's chief cares was to form *the Mission Department*. His young comrades, who had been members of the *Saṅgat Sabhā* (see above), became the missionaries. Including himself, there were at this time seven or eight, the chief others being Pratap Chandra Mozoomdar, Gaur Gabinda Ray, Mahendra Nath Bose, Bejay Krishna Goswami, and Aghar Nath Gupta. They were each and all of them attached by the closest personal ties to Keshab, for he had been the means through which they had entered into the joy of the new life. His enthusiasm and self-sacrifice laid hold of them. They gave up all worldly prospects, and accepted a life of poverty, strenuous work, and persecution. But there was practically no organization. Consequently, while each man's relation to the leader was all that could be desired, their relations with each other were governed neither by regular rule nor by personal attachment. In spite of this, however, things went fairly well at first. The missionaries went preaching and teaching in the city and the country, and many individuals were won for the cause, while here and there a new Samāj was formed. But there were frequent quarrels among the missionaries, personal animosities, divisions on principle and on method; and their leader was powerless to overcome them. He pleaded and waited patiently for peace and bound each man to himself, but could not compose differences.

The great breach with the original Samāj depressed Keshab. He was very lonely in his separation from his friend and benefactor, Debendra. This sadness and loneliness threw him back on God. In prayer and fervent adoration he found new strength. He drew the missionaries and many others into his devotions, and with them held long daily services in his house. Here the heart of the new Samāj was formed; here the members were united by common prayer and consecration into a working body. Keshab himself passed into an experience of religious feeling such as he had never had before—not even at his conversion. He had always prayed, but prayer now became to him one of his chief joys and necessities. In this new experience Keshab freely drew from the Vaiṣṇavism which was traditional in his family, and also from Christianity. The old Hindu word *bhakti*, which includes both love to God and faith in Him, became one of the watchwords of the movement. Vaiṣṇava modes of worship were also introduced, musical instruments, originally used in Chaitanya's propaganda, being employed to accompany the singing of hymns. The Vaiṣṇava *nagarkirtan* (i.e. 'town-praise'), or procession through the streets with flags flying and drums beating, with chorus-singing and dancing, was taken over and used with success. In the midst of this tempest of devotion, Keshab drew up a *Liturgy* for the services of the Samāj, which is still very widely used. Another most useful feature, first elaborated at this time, is the holding of annual festivals, when the whole day is spent in fervid prayer and worship. The *Brahmōtsava* ('Feast of Brahman'), the day of rejoicing in the Lord, was first held on 2nd Nov. 1867. So the anniversary of the opening of Ram Mohan's building, which is regularly celebrated by all Brāhmas, became the *Māghōtsava* (festival of the month *Māgha*); and the opening of Keshab's building later led to the keeping of a third annual day in August, the *Bhādrōtsava* (festival of the month *Bhādra*). Nor did this satisfy Keshab's longing for fellowship with God: a little house was found about twelve miles from the city, where he and the missionaries were accustomed to retire periodically to spend the time in reading, prayer, and meditation, under rigorous rules of self-denial.

In 1867, Keshab delivered a lecture in Calcutta on 'Great Men.' It seems to have been meant partly to correct the misapprehensions created by his lecture on 'Jesus Christ: Europe and Asia,' partly to give expression to his latest convictions on the subjects of Inspiration and Revelation. His utterances on this occasion again caused a great deal of questioning and excitement. Debendra recognized two sources of knowledge of God—Nature and Intuition; Keshab added a third—God in history, speaking through great men. It was surmised that he regarded himself as one of the great men he had spoken of, one sent by God on a special mission, and therefore to be followed, honoured, and obeyed. Early in 1868 he left Calcutta on a wide tour, accompanied by a number of his young helpers. The first place visited was Monghyr. His eloquence, his fervid piety, and his new Vaiṣṇava methods took the place by storm, and there was a great outburst of religious emotion. Here some of his followers began, in accordance with the supposed ideas of his lecture on 'Great Men,' to prostrate themselves before him and treat him with special honour. Others protested vigorously against this '*guru*-worship'; and a serious division began to show itself in Keshab's Samāj. The leader said he did not wish for these demonstrations; yet he did not rebuke those who practised them. As a result two of the missionaries left him. From Monghyr he passed on to Simla, where Lord Lawrence, drawn to him by his lecture on Jesus Christ, received him with great kindness, and discussed with him the details of a law which he proposed to pass with regard to Brāhma marriages. On the 22nd of August 1869, Keshab's building, styled the *Mandir* (Temple), in Machua Bazaar Street, was opened for public worship with great rejoicings. Several noteworthy men, destined to be leaders, joined the Samāj at this time.

Shortly after the opening of the Mandir, suddenly, without any warning, Keshab announced that he intended to proceed to England. His friends were considerably astonished at his proposal, for, as there was no organization, the whole work of the Samāj depended on him personally, and no one knew how things would get on without him. Keshab arranged in general how the work was to be distributed, the duty of editing the *Indian Mirror* being laid upon Pratap. The visit to England won him many new friends, and greatly extended both his experience and his influence.

He was received with the utmost cordiality, and addressed large audiences all over the country. The Queen gave him an audience. What impressed him most of all that he saw in Britain was the Christian home.

On his return to Calcutta in Nov. 1870, Keshab set himself to advance social reform in several directions. A new society was started, 'The Indian Reform Association,' and five departments of effort were resolved on: Cheap Literature, Charity, Female Improvement, Education, Temperance. Work along several of these lines was started under the Samāj, especially a Normal School for girls, the Victoria Institution for women, an Industrial School for boys, and the *Bhārat Āśram* (Indian Refuge), a sort of club-home, in which family life was cultivated, and women and children educated. A Bengali paper, the *Sulabh Samāchār* ('Cheap News'), was published weekly at one farthing, and did a great deal to stimulate native journalism. In connexion with all this social activity, we must note the passing of the Brāhma Marriage Act in 1872, largely as a result of Keshab's advice and agitation.

Pratap Chandra Mozoomdar had meanwhile been steadily growing in experience and strength. In 1873 he published his most noteworthy book, *The Oriental Christ*, which shows great spiritual insight, and also demonstrates how completely the author's own religious life depended on Christ. The following year he paid his first visit to England, and was very well received.

In 1873, Keshab further defined his position with regard to Revelation and his own place in the Samāj by a public lecture on Inspiration. Inspiration, he declared, is the other side of prayer. Man asks; God gives. Inspiration is not God speaking by fits and starts, but a perpetual breathing of His spirit.

He felt very distinctly that opposition was developing against him within the Samāj. There were three main causes: his autocracy, his doctrine of *adesh* (*ādeśa*), and his attitude towards the emancipation of women. He ruled the whole Samāj as sole authority, and many believed that his lecture on 'Great Men' was meant to suggest that he had a right to demand obedience; the party opposed to him was democratic, and wished to establish a constitutional government in the Samāj. By *adesh* Keshab meant the direct command of God laid upon him by special revelation at certain definite moments in his career. To his opponents these special revelations were both blasphemous and dangerous. They were also eager to give their women more liberty, and to allow them to participate in university education; while Keshab was opposed to both ideas. He feared that such freedom as is enjoyed in Europe would be most dangerous in India, and desired to secure for young girls a very quiet training, to fit them for the life of the home, rather than the same education as their brothers were receiving.

Keshab was only too conscious of all that was going on, and in consequence fell once more, in 1875, into his old melancholy. Once again, however, he fought his way to light through prayer and consecration. He called his followers around him, and, declaring that the Samāj was becoming immersed in the world, called for *vairāgya*. This is an old Vaiṣṇava word meaning 'separation,' separation from the world. He called for new asceticism, for fresh vows of poverty, and himself led the way. The daily services in his house now became longer than ever, and a settled habit in Keshab's life. His followers responded to his leadership as loyally as ever, ready to do all that he was ready to lead them into. A little later he arranged them in four groups, calling them devotees of *yōga*, *bhakti*, *jñāna*, *seva*, according as their chief method of devotion was mystic union with God, love, knowledge, or service. The first three are genuine Hindu ideas; the last he took from Christianity.

But the self-consecration of the central party failed to draw the opposition back to allegiance; and soon an act of Keshab not only convinced them that all their surmises were justified, but led to an open schism. The young Mahārājā of Kuch Bihār, a Native State in North Bengal, had been carefully trained as a minor under English officials. These men were most anxious that he should marry a girl who would be a help and not a hindrance to him; and the proposal was made that he should marry Keshab's daughter. The Mahārājā and the girl were both under age, and the Mahārājā and his family were Hindus. Now Keshab had been fighting against child-marriage and heathen-marriage, and had even seen his convictions worked into the Brāhma Marriage Act of 1872. Consequently, as soon as the proposal was made public, Brāhma opinion made itself very distinctly heard against it. But Keshab believed that God had told him to go on with the wedding; and having, as he believed, received satisfactory guarantees that the wedding would really be only a betrothal, so that the parties would not live together until they came of age, and that the marriage ceremonial would contain nothing idolatrous, he gave his consent. But whether through misunderstanding or through deceit, what Keshab expected was not carried out. He allowed himself to be hustled in the matter, and idolatrous ceremonies were introduced in defiance of his wishes. Keshab returned to Calcutta covered with shame. There could be only one result. He had flouted public opinion and had dishonoured his own principles. The opposition now became insistent that he should be deposed from his position in the Samāj. A meeting was held, but no business could be transacted. Attempts were made to seize the Mandir, but failed. So the protesters, a large body of intelligent influential men, left the Samāj.

The Ādi Samāj from 1865 to 1878.—There is very little to say with regard to the Ādi Samāj; for it was left with only a small group of supporters at the time of the secession, and the lost ground was never recovered. Just about the time when Keshab left, ladies were present for the first time at the Anniversary, and they have since attended the services. In 1872, Debendra gave up the active management of the Samāj, and betook himself to religious retirement, his son Dvijendra (*Dvijendranātha Thākur*) being appointed *āchārya* in his place; yet until the day of his death he kept in close touch with the work of the Samāj.

Statistics.—In 1878 there were already 124 *samājes* in existence, most of them connected with the Brāhma Samāj of India. When the second schism took place, a majority of the provincial *samājes* sympathized with the protesters.

6. Fourth period, 1878–1884: three Samājes: Keshab's ritualistic theism.—Those who left Keshab in 1878 were, as we have seen, a numerous body of men, most of them men of character and influence. Nearly all the missionaries, a number of the other leaders, and a section of the rank and file remained with him; but a large part of the church went out. It was decided to establish a new Samāj. All the provincial *samājes* were consulted; and, with the approval of the majority, a meeting was held in the Town Hall, and the following resolution was passed:

'That this meeting deeply deplores the want of a constitutional organization in the Brāhma Samāj, and does hereby

establish a Samāj to be called the *Sādhāran Brāhma Samāj*, with a view to remove the serious and manifold evils resulting from this state of things, and to secure the representation of the views and the harmonious co-operation of the general Brāhma community, in all that affects the progress and well-being of the Theistic cause and Theistic work in India.'

An organization was sketched, consisting of four officers and a committee containing representatives of the provincial *samājes* as well as of the Calcutta society. Services were begun in temporary rooms, and arrangements were soon commenced for the erection of a building. The name *sādhāran* means 'general,' and is clearly meant to suggest the catholic and democratic nature of the new Samāj. An English and a Bengali magazine were started to represent the views of the society. Only those who were willing to sever themselves so definitely from idolatry as to give up caste and adopt Brāhma rites at their domestic ceremonies were counted as members of the Samāj.

One fact of great importance remains to be noted. The Samāj had many able men, but no single man of religious genius like Ram Mohan, Debendra, or Keshab. Pandit Siva Nath Sāstrī was their most prominent man, but he did not dwarf the others. While the Samāj may not have grown so rapidly as it would have done had it been under a great leader, this circumstance has made the evolution of a workable free government a much simpler problem. Four missionaries, Pandit Siva Nath Sāstrī being the leader, were set apart for the work of the Samāj; and a large number of educational and religious activities were commenced. A great deal of attention was given to female education. On 22nd Jan. 1881 the new Mandir in Cornwallis Street was opened.

The creed of the Sādhāran Samāj is the same as the creed of the original Samāj (given above under 4), with the addition of the three following articles:

(7) God is the Father of men, and all men are brothers.
(8) The soul is immortal and its progress eternal.
(9) God rewards virtue and punishes sin. His punishments are remedial and not eternal.

Keshab's Samāj.—During the first two years after the division there is not much to note in the history of Keshab's church except his lectures. He first of all discussed publicly the question, 'Am I an inspired prophet?' and gave a negative answer, but declared himself in the same breath to be 'a singular man,' with special relations with heaven. 'The Lord said I was to have no doctrine, no creed, but a perennial and perpetual inspiration from heaven.' In another lecture he dealt again with Christ, definitely saying, 'There is such a thing as divinity in Christ,' but explaining his words by the doctrine of Divine humanity. The most important pronouncement, however, of this time was a proclamation, issued as a direct message from India's Mother. He thus announced for the first time his adhesion to the doctrine of the Motherhood of God. It was that most eccentric yet most interesting ascetic, Ram Krishna Paramhansa, who brought Keshab to believe the doctrine.

But if these first two years were quiet and uneventful, 1881 opened in a different way. At the Anniversary in January, Keshab appeared, with twelve of his missionaries around him, under a new red banner, on which were inscribed the words, *Naba Bidhan* (*Nava Vidhāna*, 'New Dispensation'). On a table lay the four great Scriptures of the world: the Hindu, the Buddhist, the Christian, and the Muhammadan. He proclaimed the Brāhma Samāj to be God's latest dispensation, His new gospel sent to complete and to harmonize all existing religions, and himself and the twelve around him to be the God-appointed apostles of the movement. Henceforth Keshab's Samāj was known as the Church of the New Dispensation.

At a later meeting the Twelve were solemnly ordained for their duties. They were now Keshab's twelve apostles; and they met regularly under his presidency as the Apostolic Durbar. Strict vows were laid upon them. Four of the apostles were selected, to each of whom was entrusted the study of the Scriptures of one of the four great religions. Orders were also arranged for women and girls, for men and for boys. Each Order was a consecrated Brotherhood or Sisterhood, and was under strict vows.

But the most striking innovation was the introduction of a number of picturesque ceremonies from Hinduism and Christianity. The purpose was to adapt theism to the comprehension and imagination of the common people. Several well-known Hindu sacrifices were performed in the Mandir, and by means of mystic explanation were harmonized with Brāhma belief. Baptism and the Lord's Supper were introduced, and became integral parts of New Dispensation ritual, their symbolism being explained in accordance with Keshab's ideas. Fantastic pilgrimages to various prophets and leaders were imagined and acted, and belief in the possibility of communion with these saints of former days was encouraged. A sort of Calendar of the Saints was arranged, so that at fixed times all the faithful might concentrate their thoughts on the same individuals. Next year a Mystic Dance was introduced; and, a little later still, Keshab appeared before his people as a juggler, performing magical feats with tree-leaves, beads, stones, with the Cross, the Crescent, the Trident, and other symbols, illustrating the equally marvellous jugglery of New Dispensation theology. All this eclecticism and ritualistic show naturally widened and deepened the gulf between Keshab and the large party who had left his church.

In 1882 his doctrine underwent a further extension, or at least an unfolding. Christ had been declared 'divine' in his lecture on 'India asks, Who is Christ?' He now taught the Christian doctrine of the Trinity, declaring that the one God existed as the Father, the Son, and the Blessed Spirit.

'In this plane figure of three lines you have the solution of a vast problem. The Father, the Son, the Holy Ghost; the Creator, the Exemplar, the Sanctifier; I am, I love, I save; the Still God, the Journeying God, the Returning God; Force, Wisdom, Holiness; the True, the Good, the Beautiful; *Sat, Chit, Ānanda*; Truth, Intelligence, Joy.'

He similarly adapted Hindu polytheism to Brāhma belief, speaking of the analytic process by which the idolater selects an attribute or attributes of the Eternal for his particular use, and the synthetic process whereby the theist reaches the One God of the whole earth.

The great leader passed away on 8th Jan. 1884. He was a man of great natural gifts. He had imagination, intellect, eloquence; and he had in a very high degree the electric personality, the piercing speech, and the dramatic action which make the brilliant leader. But it was not these things that most impressed his followers. What conquered them was his devotional life, his religious fire, the depth and sincerity of his moral and religious nature. It was this that made them follow him through everything, despite all his faults. For Keshab, having won them by moral forces, led them by the passion and strength of his religious feeling, not by any intelligible movement of reason. He had enough insight and imagination to enable him to present a case with great force; but he was no quiet, convincing thinker, far less a system-builder. His teaching, especially during the last period, is a collection of powerful but disjointed ideas, a heap of sparkling stones instead of a building. He had singularly

little organizing power. In all the work he controlled, every activity depended upon his personal relationship to the worker. Hence, as soon as the personality was withdrawn, the whole combination fell in pieces. In spite of the simplicity and generosity of his nature, there was a strain of deep reserve, not to say concealment, in his character, which caused him trouble with those who loved him most: he did not realize the wisdom of sharing his mind with his colleagues. This trait partly explains the confidence with which he uttered some of his later declarations of belief, and the amazement with which they were received. They had probably been a long time in his mind before he gave utterance to them.

The late Registrar of Calcutta University, Mr. K. C. Banurji, always maintained that Keshab died a Christian, that in the last few months of his life his mind changed. Mr. Banurji was very intimate with Keshab, and he was not the man to speak without serious evidence; his confident affirmation must therefore not be abruptly dismissed as untrue. On the other hand, Keshab maintained such a consistent attitude to Christ throughout his life, and, despite his reserve, was so little likely to change on a point of such importance and not tell his friends, that it is difficult to believe that Mr. Banurji was not mistaken.

Pratap Chandra Mozoomdar was absent on his second tour in the West, visiting Europe and America, when Keshab died—a circumstance which complicated the situation in Calcutta seriously.

In order to complete the creed of the New Dispensation Church, three articles require to be added to the nine of the Sādhāran Samāj:

(10) God is a Trinity in Unity—Father, Son, and Spirit. God is Mother as well as Father.

(11) Brāhmaism is not a new religion, but the essence of all religions, the one universal faith; the Brāhma Samāj is God's latest Dispensation; and the missionaries are the God-appointed apostles of the new gospel.

(12) Knowledge of God comes through *Inspired Men* as well as through *Nature* and *Intuition*. He reveals His will on occasion to His servants by command, *Adesh*.

Statistics.—When Keshab passed away, the number of *samājes* all told was 173. There were said to be about 1500 covenanted members, and about 8000 adherents.

7. Fifth period, 1884-1909: progress of the Sādhāran Samāj.—During this period both the Ādi Samāj and the New Dispensation Church have declined. Indeed, the old Samāj is now almost a family affair. Keshab's apostles still hold bravely on, but they have a comparatively small following in Calcutta, and their relationships with *samājes* outside are not very definite. With Keshab's death the New Dispensation at once became a staid body with an unchanging theology, like the other two branches: the contrast between this period and Keshab's last quinquennium is very marked. When he passed away, the development of Brāhma doctrine ceased. Indeed, a blight seems to have fallen on all three Societies; for during the last quarter of a century no theological work of any importance has appeared, although hymn-writing still flourishes.

The Sādhāran Samāj.—This has gone forward, not changing much in matters of faith or of practice, but slowly growing in numbers and in influence. The absence of a great leader robs their annals of great events; and we need not linger over the various difficulties they have had to encounter in working out and maintaining a constitutional government. We shall therefore merely sketch the position of the Samāj of to-day.

The affairs of the Samāj are controlled by the General Committee, which consists of 63 members, representing Calcutta and the rest of India in about equal proportions. The officers are a president, a secretary, three assistant secretaries, and a treasurer. These, with 13 others, chosen by the General Committee, form the Executive. The general work of the Samāj throughout India as well as in Calcutta is conducted by the missionaries, with their two auxiliaries, the Sadhan Asram (*Sādhana Āśrama*) and the Sebak Mandali (*Sevaka Mandali*). Pandit Siva Nath Sāstrī, though now well advanced in years, is still [1909] their chief missionary. He represents the Hindu side of the Samāj. Beside him there stands a young man of considerable promise, Hem Chandra Sircar, who was trained in Manchester New College, Oxford, and represents the Christian element. There are nine other missionaries. Sita Nath Tattvabhushan, a well known Vedāntist, is their chief educationalist and philosopher. The *Brāhma Vidyālaya*, or Brāhma School, is a Theological Institution for training young missionaries. The Sadhan Asram, or 'Work Refuge,' is a hostel attached to the Mandir; but the phrase is now more frequently used of the group of students and other workers residing in the Asram who form a society for practical service. Their work ranks next in importance after that of the missionaries. Similar societies have been formed in a few places outside Calcutta. Several notable laymen render the Samāj large assistance in the Sebak Mandali, or 'Lay-workers' Union.' The Samāj possesses a press in which its publications are printed, the *Indian Messenger* and the *Tattva Kaumudi*, i.e. 'Moonlight of Truth,' being the two journals. There are 43 provincial *samājes* formally affiliated with the central organization, and as many more in fellowship, although not affiliated. There are 1044 initiated members in all; but large numbers of men and women are practically members, though they have not been initiated. The activities of the Calcutta congregation, besides the Sunday services, are the Sunday School; the Saṅgat Sabhā, which meets weekly and discusses religious questions; the Theological Society; the Students' Weekly Service, which, though not organically connected with the Samāj, is conducted in the Mandir every Saturday evening, and draws many students to theism; the Brāhma Girls' School; and the City College.

The New Dispensation Samāj.—After Keshab's death, those members of the Apostolic Durbar who were in Calcutta met and declared that Keshab was still their leader, and that no one could ever take his place in the Mandir. But other members of the missionary body who happened to be absent, notably Pratap Chandra Mozoomdar, seriously objected to this decision, and the mass of the members stood with them. Keshab's family, on the other hand, wished to treat the Mandir and Keshab's pulpit as a sort of family preserve. Pratap, who was by far the best known of the missionaries, and the only one at all fitted for being the leader of the Samāj, wished to be elected to take Keshab's place. But the Apostolic Durbar would not agree to do that or anything else. On the one side, then, stood the quarrelling missionaries; on the other, the members, begging them to be reconciled and to make arrangements for the work and the worship of the Samāj; and so affairs have continued ever since. The old personal quarrels which Keshab was unable to put down, and which were prevented from breaking up the Samāj only by his personal influence, came uppermost, and ruined everything. For a time the laity took the Mandir into their own care, and conducted the services, excluding the missionaries from control, because they would not agree. There have been many attempts at re-organization and as many failures. Once at least the police had to be called in. There has been no open schism, but there has been constant dis-

union; and to-day three competing services are conducted under the name of the New Dispensation every Sunday; and even so there are some members who refuse to attend any one of the three.

The active work of the Samāj was thus brought almost to a complete standstill, and growth became impossible. The New Dispensation counts for less and less in the life of India.

Pratap Chandra Mozoomdar, who was often spoken of as the leader of the Brāhma Samāj, never became the acknowledged leader even of the New Dispensation Church. His name and influence were far greater in England and America than they ever were in Calcutta and India. Failing to obtain Keshab's position, he went into semi-retirement, editing his paper, *The Interpreter*, and writing elsewhere occasionally, but seldom doing any missionary work for the Samāj except when he appeared to deliver the annual address in the Town Hall. His appearance at the Parliament of Religions in Chicago in 1893 still further widened his reputation, and he was always a welcome speaker on Calcutta platforms, but he was scarcely a religious force in the city. He passed away in 1905. His funeral demonstrated in a very remarkable manner, to one observer at least, what a large number of fine intellectual men were still connected with the New Dispensation Church. Every one seemed fit to be a leader.

Since Keshab's death the fantastic elements of his later teaching and practice have not been obtruded on the public. The tendency is towards simplicity except on one point: the death of Keshab is celebrated annually as the day of the 'Ascension of the Master.'

To-day there are still a number of the old missionaries connected with the Samāj, notably Gaur Gabinda Ray, Mahendra Nath Bose, Pyari Mohan Chaudhury, but they do not pull together. Christ is one of several causes of division among them. Then there are a number of younger men who take a prominent place, especially Prof. Benoyendra Nath Sen, who is a very finished speaker, and Pramatha Lal Sen, who is an acceptable preacher, and does a good deal of work among young men.

Besides the Sunday services, the publishing work of the Samāj and the educational activities are still kept up. There is a hostel for students. The missionaries do a good deal of visiting, keeping the flame burning in families.

The Ādi Samāj.—The history of the original Samāj during the last quarter of a century is very little more than the doings of Debendra Nath Tagore and his phalanx of gifted sons. Yet there are a few societies outside Calcutta which retain their connexion with the Ādi Samāj. The theology of the Samāj has remained stationary since the schism of 1865. Debendra gave up his position after more than thirty years of service. For thirty-three years more he lived the life of a religious recluse; for he survived until 1905. He was almost exclusively under Hindu influence, his master being Rāmānuja. To him ancient India was the cradle of all that was pure in morals and religion. So powerful was Hindu thought in his life, that up to the very end he never definitely told his disciples that he had given up the doctrine of transmigration, as practically all Brāhmas have done. He was never known to quote the Bible, and in his printed sermons no reference to the teaching of Christ is to be found. The direct communion of the human soul with the Supreme Spirit was the most salient point in his teaching. His public life proved him to be a man not only of religious genius and intellectual capacity, but of a peculiarly noble and generous character. His long retirement added to the spell he had thrown over the minds of his fellow-townsmen. By common consent he was called the *Maharshi*, i.e. the great *ṛṣi*, or saintly seer. The bleached complexion and massive architecture of his face still revealed, a few months before his death at the age of eighty-seven, the lofty spiritual nature and the sensitive heart which had done so much in the far-away years.

The provincial samājes.—These continue to grow slowly in number and influence. A few are still in closer sympathy with the Ādi Samāj than with the more progressive bodies; a number belong in doctrine and worship to the New Dispensation order, but a great and increasing majority have their closest connexion with the Sādhāran Samāj. These distinctions, however, count for far less in the country than they do in the metropolis; and a missionary is certain to receive a warm welcome almost anywhere, no matter to which of the branches he belongs. The Prārthanā *samājes* in Western India, though not organically connected with the Brāhma Samāj, are on terms of close friendship and fellowship.

These societies vary largely both in size and vitality. A number have a considerable membership, own their own building, and do a good deal of work. Their activities follow the lines laid down in the older bodies. They have their weekly religious service, usually on Sunday, and sometimes a prayer-meeting besides. Keshab's original *Saṅgat Sabhā* ('Friendly Society') was copied in the Sādhāran Samāj in Calcutta, and the example has been very generally followed elsewhere. It is a sort of Wesleyan class-meeting. The annual festivals are celebrated with enthusiasm. A library and some simple missionary work complete their religious activities. But they consider their work incomplete, if they do not advance education, especially for girls. Some form of philanthropic work is usually attempted also.

It will probably conduce to clearness if we represent the theological affinities of the three *samājes* graphically:

<table>
<tr><td>(1) God is a personal being with sublime moral attributes.</td><td rowspan="6">Creed of the Ādi Samāj.</td><td rowspan="9">Creed of the Sādhāran Samāj.</td><td rowspan="12">Creed of the New Dispensation Samāj.</td></tr>
<tr><td>(2) God has never become incarnate.</td></tr>
<tr><td>(3) God hears and answers prayer.</td></tr>
<tr><td>(4) God is to be worshipped only in spiritual ways. Men of all castes and races may worship God acceptably.</td></tr>
<tr><td>(5) Repentance and cessation from sin is the only way to forgiveness and salvation.</td></tr>
<tr><td>(6) Nature and Intuition are the sources of knowledge of God. No book is authoritative.</td></tr>
<tr><td>(7) God is the Father of men, and all men are brothers.</td></tr>
<tr><td>(8) The soul is immortal and its progress eternal.</td></tr>
<tr><td>(9) God rewards virtue and punishes sin. His punishments are remedial and not eternal.</td></tr>
<tr><td>(10) God is a Trinity in Unity—Father, Son, and Spirit. God is Mother as well as Father.</td></tr>
<tr><td>(11) Brāhmaism is the universal religion; the Brāhma Samāj is God's latest Dispensation; and the missionaries are His apostles.</td></tr>
<tr><td>(12) Knowledge of God comes through Inspired Men as well as through Nature and Intuition. He reveals His will on occasion to His servants by command, Adesh.</td></tr>
</table>

8. Characteristics of the movement.—(*a*) *Width of diffused influence, narrowness of effective range.*—The Brāhma Samāj, while claiming to be a world-wide movement, and actually making its voice heard in Europe and America, has not succeeded in extending its effective service beyond India, has made no deep impression outside the province of its birth, and even where it is strongest has touched only the educated class. There is a Brāhma Mission to hill tribes in Bengal, and a Prārthanā Samāj Mission to the depressed classes in Bombay, but nowhere has the movement taken a serious hold of the common people. It is a remarkable fact that in 1901, when the Samāj was already seventy-three years old, only 4050 inhabitants of India were returned as Brāhmas in the Census papers. This, in the case of a really indigenous movement, which has had three men of high religious genius amongst its leaders, is very noteworthy.

(*b*) *Influence on India.*—The Samāj has exercised a very great influence on religious opinion all over India. The work of the Samāj has also had a good deal of weight, especially in Bengal, in the matter of social reform. But the number of those who have been induced to become real theists by the Brāhma propaganda is certainly disappointingly small. The great success of the revival within Hinduism has operated powerfully to check the drift to Brāhmaism; for men are now inclined to believe that they can get as much spiritual religion in Hinduism as in Brāhmaism, and that social reform is almost as possible within as without the camp.

(*c*) *Debt to Christianity.*—Brāhmaism owes a large debt to Christianity. The primal impulse came largely from Christianity; Brāhma methods are almost without exception Christian; Brāhma criticism of Hindu social wrongs is simply Christian criticism; and large masses of Keshab's religious and moral teaching were taken direct from Christ, and still fertilize Brāhma thought and conduct in the Sādhāran as well as in the New Dispensation Samāj.

But the Church in India also owes a considerable debt to Brāhmaism. The latter has done much to open the Hindu mind to serious monotheism; has helped to break down prejudice against Christ; like John the Baptist, has prepared the way for Christianity in more than one centre; and has drawn out of Hinduism into spiritual religion many an individual who has finally found peace in the Christian Church.

(*d*) *Relation to Hinduism and Christianity.*—The official doctrine of the Samāj puts Hinduism and Christianity in the general catalogue of particular religions as opposed to Brāhmaism, which is regarded as the absolute and universal religion. But in actual fact these two religions hold an altogether different position. They are the sources of Brāhmaism. A careful survey of the doctrines that have been professed in the Samāj will show that there is not one which has not been drawn either from Hinduism or from Christianity. The frequently repeated assertion that Brāhmaism is the essence of all religions is without any basis in fact. The Brāhma system is drawn from Hinduism and Christianity.

The next point to note is how these twin sources are related to each other in the product. The most cursory glance will convince any one that the Hindu and the Christian elements stand side by side, neither controlling the other. Indeed, the controlling principle throughout has not been revelation, whether Hindu or Christian, but rationalism;* and the elements taken from Hinduism and Christianity have been selected as being in harmony with the dominant rationalistic idea. The only complicating circumstance is this, that the rationalism has not remained constant, but has altered in the course of the history; under Ram Mohan taking its colour from Deism, under Debendra from Rāmānuja, under Keshab from Unitarianism in the earlier period, from Christianity in the later. Hence the clear distinctions between the *samājes* to-day.

The way in which all this came about is also clear. There were two points on which Ram Mohan and Keshab, the two creative leaders, were thoroughly convinced: (1) that Christ would yet be supreme in India;* (2) that the future religion of India would be Indian and loyal to Hinduism. On both these points, we may be certain, history will justify them. It was in the inference they drew that they went wrong. Believing that the future religion of India would be loyal both to Christ and to Hinduism, they imagined that they had only to bring the two together and the result would be the future religion of India. They both failed to see that essential Hinduism and essential Christianity can no more mingle than oil and water. Had they lived later, they would not have made the mistake; for they were men of open mind; and the science of religions would have revealed the truth to them.

Hinduism is ancient not only in age, but in character. It enshrines a very early conception of the universe—a conception which men's minds have now outgrown. This is to the effect that time and matter and souls are as eternal as God; the world is a never-ending series of meaningless, self-repeating changes; matter is the seat of all evil, and nature does not reveal God; men in the world are spirits in prison, and their only hope is release from its toils.

Christianity, on the other hand, brings us a conception of the universe which modern men can believe, and which stimulates and invigorates man's life in every direction: God is the loving Father; men are His children; the world is God's good world, prepared for the disciplining of His children; progress, not repetition, is the inner secret of the world-process.

These two conceptions cannot be reconciled or brought to act in harmony; the one excludes the other. The history of the Samāj supplies a clear illustration of the truth. Ram Mohan and Debendra endeavoured to keep the Samāj within the limits of the old religion, but the outcome of the history has been to drive Brāhmas to stand outside the caste system altogether and to avoid most scrupulously the touch of Hindu sacerdotalism and worship. In no other way can the health and strength of the community be secured. The Ādi Samāj has withered, because it has attempted to remain within the caste system—has attempted to graft Brāhmaism upon Hinduism. The Christian elements in the Brāhma faith are hopelessly antagonistic to the Hindu system. So Brāhmas to-day are as completely outside Hinduism as Christians are.

Thus Ram Mohan and Keshab were wrong in thinking that a new, vigorous, modern religion could be created merely by placing a few of the leading ideas of Christianity alongside of a few of the leading ideas of Hinduism and allowing the two to come together on equal terms. In order to reach the end in view, two things are indispensably necessary: (1) The supremacy of Christ must be frankly and ungrudgingly accepted. Only

* This became explicit in 1850, when the authority of the Vedas was abandoned.

* Cf. Ram Mohan Ray's *Precepts of Jesus*; the last chapter of Miss Collet's *Life and Letters of Raja Ram Mohan Roy*; and Keshab's two lectures on 'Jesus Christ.' Pratap's position was precisely the same; see *The Interpreter, passim.*

in this way can a system be secured which modern men can accept, and which will produce a healthy modern nation. Rationalism is sterile in India as elsewhere. (2) Christ must be set forth as coming not to destroy Hinduism, but to fulfil it; not as the enemy, but as the consummator of the religion. For, while the basal conceptions of the Hindu system are utterly opposed to Christianity, all the highest and holiest things in it—all that the modern thinking Hindu feels he cannot turn his back on, all that Ram Mohan, Debendra, and Keshab wished to conserve, everything that has vitality and growth in it—all this arose in reforming movements, eager spiritual struggles to transcend the traditional Hindu system. Within the pale of Hinduism these lofty spiritual aims have never had a chance to realize themselves. It is only in Christianity that a free open field for their development is found. Hinduism must die into Christianity, in order that the best that her philosophers, saints, and ascetics have longed and prayed for may live. Thus the truth with regard to the long controversy between Brāhmaism and Christianity is that the missionaries were right in insisting on the supremacy of Christ, and the Brāhmas were right in insisting that Hinduism should not be treated as a weed.

LITERATURE.—The best brief outline of Brāhma history is found in Monier Williams, *Brāhmanism and Hinduism*³, London, 1887, pp. 475–528. There are four longer narratives: Leonard, *A History of the Brāhma Samāj*, Calcutta, 1879; Mozoomdar, *The Faith and Progress of the Brahmo Somaj*, Calcutta, 1882; F. Lillingston, *The Brahmo Samaj and Arya Samaj*, London, 1901; and Slater, *Keshab Chandra Sen and the Brāhma Samāj*, Madras, 1884 [the first two interesting but inaccurate, the last two reliable, and the last containing numerous extracts from the writings of Keshab Chandra Sen]. For further detail consult the following biographies: Collet, *The Life and Letters of Raja Ram Mohan Roy*, London, 1900; *The Autobiography of Maharsi Devendranath Tagore*, translated from the original Bengali, with an introduction by Satyendranath Tagore, Calcutta, 1909; Mozoomdar, *The Life and Teachings of Keshub Chunder Sen*, Calcutta, 1887; and *Heart-Beats by P. C. Mozoomdar with a Biographical Sketch* by S. J. Barrows, Boston, 1894; the monograph, Sastri, *The New Dispensation and the Sadharan Brahma Samaj*, Madras, 1881; the works of the leaders: *The English Works of Raja Ram Moham Ray*, edited by J. C. Ghose, 2 vols., Calcutta, 1885–87; *The Complete Works of Raja Ram Mohun Roy, Sanskrit and Bengali*, Calcutta, 1880; Keshab Chandra Sen, *Lectures in India*, 2 vols., London, 1901; *The Brahmo Somaj: Keshab Chandra Sen in England*, Calcutta, 1881; Mozoomdar, *The Oriental Christ*, Boston, 1888; the collections of texts, *Brāhmadharma*, Calcutta, 1850, and many editions later; *Slokasangraha*, Calcutta, 1866, and many editions later; the Year Books, the Annual Reports, and the Periodicals.

BRAHŪIS.—See BALUCHISTĀN.

BRAIN AND MIND.—1. Historical. —That the brain of man is that part of his bodily organism which is in immediate connexion with his mind—whatever the intimate nature of that connexion may be—is to-day an accepted fact. That it has not always been so may be seen from the number of words in our own and in other languages which appear to connect mental and moral qualities with the heart, with the stomach, and even with the kidneys and bowels. In early Greek speculation, Alcmæon of Crotona (beginning of 5th cent. B.C.), a reputed pupil of Pythagoras, is referred to as holding that sense-impressions are combined together in the brain, which receives them through certain avenues (the nerves), and constructs out of them 'memory, opinion, and science'; and that the controlling centre (τὸ ἡγεμονικόν) of the body resides in the brain (Diels, *Frag. d. Vorsokratiker*², i. 101 f.). Hippocrates also and Democritus were credited with a similar belief. It was partially adopted by Plato, who placed the reasoning portion of the soul in the head, passion in the heart, and desire in the lower part of the body (*Timæus*, 69–72). According to Aristotle, the soul, as the *entelechy* of the body, was correlated with its every part; while the brain was an inert mass, the function of which was to cool the blood for the heart (*de Part. An.* ii. 7).* Galen (2nd cent. A.D.) recognized the dominant part played by the brain as the centre of the nervous system, by which the 'vital spirits' were distributed over the body; but it was in the ventricles or spaces rather than in the substance of the brain that he placed the 'seat of the soul' (*de Usu Partium*, lib. 8). These or similar views prevailed until the beginning of the 17th cent., when the anatomy of the brain began to be more clearly understood through the work of Varolius and others. From this date the tendency was to subdivide the brain, and to ascribe to separate centres the different mental functions; the most comprehensive attempt of this kind being the phrenological system of Gall and Spurzheim (1810). Their system was deficient, however, both in psychological analysis and in scientific proof: they referred different moral and intellectual characters to different areas of the surface—and underlying parts—of the brain, and assumed that the skull with its 'bumps' followed closely the outline of the brain. Causality, Combativeness, Philoprogenitiveness, the Sense of Language, and Calculation are a few out of their thirty-eight promiscuously grouped 'faculties.' A reaction followed with Flourens, who taught (in his *Recherches expérimentales*†) that the whole brain is the organ of mind, that loss of or injury to any part of it weakens its general function, *i.e.* lessens the degree of mental activity, but does not remove any *special* function. It was not until 1861, when Broca published his paper *Sur le Siège de la Faculté du Langage articulé*, that the theory of special localization began to take a new and more adequate form. The researches of Hitzig, Munk, Meynert, Flechsig, and many others in Germany, and of Ferrier, Horsley, Schäfer, etc., in England (see Literature at end of this art.), have, since 1870, gone far to establish the doctrine on a sound basis, although its interpretation is still disputed.

2. General relationship.—The general correlation between brain and mind is established partly by comparative, partly by pathological, data. (*a*) In closely allied animal species, it is found that the relative weight of the brain or corresponding ganglia increases with the complexity of the life of the animal, with its adaptability to new surroundings—in short, with all that is summed up in the vague term 'intelligence.' A striking instance is the ant's brain (the *corpora pedunculata*), which in the worker ant is very large, in the queen ant much smaller, and in the male ant almost absent; while activity and 'intelligence' are proportionately distributed (Forel). The correlation is closer still if, instead of weight, the surface-area of the brain is taken. In higher animals the nerve-elements are massed in the grey matter, the *cortex*, of the brain; and by means of *fissures* and *sulci*—dippings and foldings of this outer 'bark' into the substance of the brain—the surface may be enormously extended without a proportional increase in volume or weight. In the main, also, if animals of different species, but of approximately the same size and of similar *habitat*, are compared, the brain increases in relative weight (or surface-area) as the rank of the animal in the scale of evolution is higher. Nearest (but *longo intervallo*) to man in this respect come the anthropoid apes.

In the development of the brain with *age* in the human individual a similar comparison is found to hold. As the mental capacities improve, the brain

* ὁ μὲν οὖν ἐγκέφαλος εὔκρατον ποιεῖ τὴν ἐν τῇ καρδίᾳ θερμότητα καὶ ζέσιν (Berlin ed. 652 a. 24).

† *Recherches expér. sur les propriétés et les fonctions du système nerveux*, 1824, ²1842. Cf. his *Phrenology Examined*², 1845, tr. Meigs, 1846.

grows in volume until about the age of fifteen, when it reaches a certain maximum relative weight; after this *development* takes the place of *growth*, the brain-elements entering into more and more complex relation with each other, but without much increase in size or number. From the age of fifteen there is a gradual decline in relative weight. In general, also, a lower value has been found for the *average female* than for the *average male* brain, alike in weight, in surface-area, and in thickness of cortex. This is true even when allowance is made for the differences in relative size of body. Various interpretations of the fact may, however, be given. Lower races also show, on the average, lower standards of brain-weight. Individual men of markedly superior intellectual powers have in many cases been found to possess brains in which there was more than average development of the brain surface, the *sulci* being cut deeper, and having more numerous ramifications than in the normal man. The brains of Gauss and Helmholtz are well-known examples. On the average, 'eminent men' tend to have higher than the normal brain-weight; at the same time some great personalities have had skulls of relatively small brain-capacity for their race; and *vice versa*, it has been remarked, many persons of large skull capacity have been inmates of our poorhouses and prisons. The factors making for development, more especially the all-important one of *opportunity for exercise*, are, of course, co-determining elements with the initial growth-capacity itself. The actual development attained in adult life is a resultant of many diverse factors. It is to be noted especially that, apart from its correlation with mind, the brain has important functions that are purely physiological; it regulates the movements of the body and of its different members, and especially it regulates the nutrition, and other processes of metabolism, which take place in the particular organs of the body. Accordingly, such factors as body-weight, stature, mobility, rate of metabolism or vitality, and plasticity stand in intimate relation to the brain-capacity of the organism. Biologically considered, intelligence falls under 'plasticity'; it is a function by which the organism adapts itself readily to new surroundings or situations, and by which it carries over the experience of the past into the present, to the advantage of itself or of its species.

(*b*) The argument from the pathology of mind and of brain points in the same general direction, viz. to the conclusion that mental capacity on the one hand, mental vivacity on the other, are correlated with the development and with the functioning—healthy or the reverse—of the brain. No responsible physician now regards mental perturbations as anything but *symptoms*, that is, as consequences or effects, of which the immediate cause, whatever the primary or ultimate cause may be, is a defect or disease of *the brain*. The disease may be (1) *developmental*, the result of a defective start-off in life, owing to which the brain does not reach its full growth, or grows disproportionately, or is more sluggish in its working than the normal or average brain (as in imbecility), or is more unstable, and therefore unfit to cope with a great crisis in life such as the onset of puberty, for example, constitutes. The disease may be (2) *adventitious*, the result of any one of the innumerable strains and stresses to which the brain is liable from bodily disease, accidental injury, excessive use, the abuse of stimulants, etc.; or (3) *degenerative*, an accompaniment of *decay*—the wearing out of the brain or of part of the brain in old age, while the body as a whole remains relatively healthy. Again the diseases are recognized as falling into two broad divisions, according as they derive from organic, structural defects or changes of the brain, or from merely functional changes—changes depending on the nutritive or other chemical processes in the brain or in any part of it. But mental pathology has by no means advanced so far as to be able to foretell the changes that will be found at death in any given form of insanity: there may be no visible degeneracy at all, and, *per contra*, the brain of a person dying in perfect sanity, according to the judgment of his neighbours, may show marked signs of organic defect. Numerous cases are recorded in which very extensive degenerations of the brain, even to the whole of one of the hemispheres, have been found without any mental defect having been remarked during the subject's lifetime. While this is admitted, however, it only alters our interpretation of the correlation between mind and brain; it does not throw any doubt upon the existence of a correlation.

3. Elements of the central nervous system.—The morphological element in the cortex or grey outer layer of the brain is the *neurone*. It consists of (1) the cell-body, (2) the *dendrites* or short branching outgrowths, (3) the long axis-cylinder. There are numerous different forms of cell. Thus, as many as eight different layers may be distinguished in some parts of the cortex from without inwards, each marked by the presence of a characteristic form of cell. The largest are the pyramidal cells, which are most numerous in the motor-zone, and measure from 50 to 120 μ.* In the body of the cell is a nucleus, and often within this can be distinguished a nucleolus. The nucleus undergoes marked changes under exhaustion, as does also the form of the cell. From the cell branch out, usually in several directions, a number of protoplasmic fibres, giving off collaterals at right angles, and ending (as do the collaterals also) in basket- or bush-like masses of fine terminal fibrils: hence the name *dendrites*. One of the prolongations of the cell is, however, of a different nature. It is the axis-cylinder, or axone, issuing usually in a direction different from that of the dendrites. The axones form the white fibres of the brain and spinal cord; each is protected or isolated by a sheath of connective tissue, and a layer of myeline—a fatty substance—between the fibre and the sheath. It is this myeline that gives the white appearance to the nerve-fibres, and it has been shown that it is formed only with the actual functioning of the nerve-cell. Thus Flechsig has determined, through this fact, the successive dates at which in life the different 'brain-centres' become active. The axis-cylinder or axone is the true nerve-process, *i.e.* that by which the excitation is conveyed to the brain from a sense-organ, or to the muscle from a brain-centre, or between two such brain-centres themselves. Some of the fibres are of great length, running in some cases from the cortex down to the foot of the spinal cord. The dendrites, with their shorter processes and basket-work endings, may be regarded as the receptors, the means through which the excitation of one element is transmitted to another.† There is no continuity, according to the prevailing view, between the endings of one cell and those of another, the fibres in all cases ending freely, but usually in the close neighbourhood of, or perhaps in contact with, those of another cell or group of cells. On the other hand, it has been shown that the fibrils of the axone are continuous, passing *through* the nerve-cells to the various dendrites or branches.

The function of the cell-body seems to be mainly either (*a*) that of a nutritive centre, or (*b*) that of a store-house of energy. Distributed between and among the nerve-cells are cells of the *neuroglia*, or supporting tissue.‡ The axones, as has been said, become medullated fibres, passing either vertically downwards to the lower brain and spinal cord (projection-fibres), or horizontally along to the neighbouring centres, or across by way of the *corpus callosum*—the central commissure of the brain—to the other hemisphere. The nerve-fibres are either afferent (centripetal) or efferent (centrifugal), the former leading *to* the cortex from the lower brain or spinal cord, and being ultimately connected through other neurones with the sense-organs, the latter leading *from* the cortex to the lower brain and spinal cord, and finally, through connecting links, to the muscles, the glands, the viscera, or other organs of the body. Experiments show that the direction in which the current of excitation will flow is not dependent upon the *nerve-fibre* itself, but upon the *connexions* at either end. Thus an afferent fibre may be transformed into an efferent fibre. The law of the Specific Energy of Nerve-fibres (Johannes Müller) was interpreted as implying that a given nerve-fibre, no matter by what means or at what point in its course it was stimulated,

* μ=1/1000th millimetre.

† Energy is transmitted *to* the cells through the dendrites, and *from* the cells through the axis-cylinder (v. Gehuchten); Golgi regards the function of the dendrites as that of taking up food from the blood-vessels.

‡ Various other functions have been suggested for the neuroglia. Cajal regards the expansions and contractions of its cell as conditions of sleep and of waking respectively.

would give rise to its proper sensation, or would contract its given group of muscles, or cause secretion in its given gland, whatever its particular function might be, and that this specificity was inherent in the fibre itself. Later it was thought to depend upon the brain-centre in which the fibre ended; but there can be little doubt that Wundt is right in his view that it is the peripheral organ, sensory or muscular, that determines in the first instance the character of the reaction, and that the peripheral organ in its turn has been gradually developed in adaptation to the physical stimuli acting upon the organism, which in their sum make up its environment. This is true at least of the *origin* of such paths. Thus, when an electric current sent through any part of the optic nerve gives rise to a sensation of light, this is because the excitation first runs backward to the eye, and there sets up in the retina the changes which are normal conditions of visual sensation.

The neurone, like all other living substance, is subject to conditions of growth and decay: its growth and development are determined by moderate use, its decay and degeneration by excessive use or by disuse. Stimulation causes first of all an increase in volume, and a change of internal structure; later the cell branches out in various directions, until a fairly active cell may have innumerable ramifications—prolongations, collaterals, and brush-like terminals: in this development may be found the physical basis of *practice*, of *memory*, of *mental growth* generally. The effect of drugs or poisons (with which *fatigue* must be classed) is to cause a diminution of volume, and withdrawal of the processes, followed, if prolonged, by other more radical changes. Activity seems to determine reflexly an increased flow of blood to the parts involved,—processes of waste and repair take place more rapidly; if there is excessive activity, however, the continued flow of blood may cause permanent injury of various kinds according to the tissue affected. On the other hand, impaired activity, as in fatigue, reflexly produces diminished flow of blood to the parts involved: the neurones contract in volume and withdraw their pseudopod-like expansions. This is probably the condition of which sleep is the expression. It is noticeable that unconsciousness appears to arise alike from excessive *loss* of blood from the brain (anæmia), and from excessive *flow* of blood to the brain (hyperæmia), the result of which is probably a check to the pulse of the blood (*stasis*). The immediate cause of many mental diseases also is said to be the morbid accumulation of blood in special parts of the brain (Luys, after Forbes Winslow).

4. The special centres: localization of functions.—The complexity of the grey matter of the brain, its numberless cells, the endless tracery of interlacing fibres being understood, the question arises: What is the precise relation of the neurone to mental function? Does the activity of the neurone determine consciousness, and have different neurones different parts to play in giving rise to different mental contents or ideas?

Since 1861, as has been said above, a mass of evidence has been collected which goes to show that not merely does the *general* health and capacity of the mind depend upon the integrity and healthy functioning of the brain, but that also *special* mental functions or capacities are dependent upon certain localized areas or regions of the upper brain. In particular, it has been shown that the capacities to receive and co-ordinate 'impressions' from the different sense-organs—the impressions which are the physical correlates of sensations and perceptions—are connected with definite brain 'centres,' as are also the powers of effecting or voluntarily carrying out movements of the different parts of the body. In the year mentioned, Broca published the paper whose title is given above (p. 824[b]); he claimed to have found that in cases of aphasia—a disease symptomatized, in its pure form, by loss of the power of articulate speech, without any defect in the general intelligence, or any paralysis of the vocal muscles—a small portion of the third frontal convolution of the *left* hemisphere is almost always affected. It was afterwards added that in *left-handed* persons, if aphasia occurs, the injury will be found in the corresponding part of the *right* hemisphere. Since then, many other forms of partial loss of mental powers have been studied both as to their symptoms during life, and as to the state of the brain at death. Again, evidence has been collected since 1870 (Hitzig) from various experiments upon animals. The methods have been (1) the extirpation of smaller or larger portions of the brain, with observation of the animal's behaviour after recovery; (2) the stimulation of the naked brain at different points, with observation of the movements made; and (3) the study of the degeneration of tracts running between the brain and the sense-organs or muscles, after a given portion of the brain has been excised. More recently, our knowledge of the connexion of the nervous elements in the different parts of the brain and spinal cord has been greatly extended by newer methods of section-making and of staining. As a result we obtain a scheme like the following:—

The centres for consciousness, intelligence, and will, as distinct from the centres for reflex and automatic movements and co-ordinations, are located in the cortex or outer grey mantle of the hemispheres; they are usually classified as (1) *sensory centres*, (2) *motor centres*, and (3) *association centres*.

(1) Of the *sensory* centres, that for Sight is placed in the occipital or hindmost *lobe*, more especially in the parts lying about the *calcarine fissure*; that for Hearing in the first and second convolutions of the *temporo-sphenoidal* lobe; that for Smell in some part or all of the so-called *limbic lobe*,* seen on the internal and inferior aspects of the hemisphere; that for Taste perhaps in the lower part of the *temporal lobe* (but on this there is no agreement among anatomists); that for Cutaneous Sensations—including under this title what is called common or general sensibility, organic sensibility, muscular sensibility, sensibility to touch, to temperature, to pain, etc.—is, as might be expected, the most extensive and least definable of all the centres: the tentative conclusion of Bianchi is that its centre is the wide area lying about (and below) the *Rolandic zone*, but that within this there are various centres of 'greater functional intensity'; these vary greatly, both in position and in development, in different individuals (*Text-Book of Psychiatry*, 57).

(2) The so-called *motor* centres, the stimulation of which gives rise to limited movements of different limbs according to the part stimulated, and injury or disease of which is in man connected with limited paralysis of different parts of the body, lie within the area described above as that of common sensibility; but there are also one or two smaller 'centres' in other parts of the cortex. The principal motor zone is that which lies close to the fissure of Rolando; according to most recent views (Sherrington, etc.), just *in front of* and *in* the fissure itself, but not passing behind it, *i.e.* in the ascending frontal convolution, and parts of the first, second, and third frontal convolutions; also, on the inner side of the hemisphere, parts of the marginal convolution, and of the *Gyrus fornicatus*. It is from these parts of the cortex that the great band of white pyramidal fibres issues, passing inwards and downwards between the grey masses of the mid brain (the *Optic Thalamus* and the *Lenticular Nucleus*) to the lower brain, where the greater part of those fibres which 'serve' the limbs of the body cross over ('decussation of the pyramidal fibres') to the side opposite to that from which they set out. Probably all the true motor or efferent fibres, except possibly those of the trunk of the body, cross over at some point in their course, whether through the various commissures or connecting bands between the hemispheres themselves, or in the *Pons* and *Medulla Oblongata* of the lower brain, or in the spinal cord. Thus injury to the motor zone of the right hemisphere is followed by total or partial paralysis of some of the muscle-groups on the left side of the body, and *vice versa*. The motor zone, like the band of pyramidal fibres passing through the internal capsule, has been subdivided into smaller centres. From the front of the brain backwards to the fissure of Rolando, lie

* *Gyrus fornicatus* and *G. hippocampi*.

the centres for movements of head, trunk, and leg, in that order; from the top, downwards towards the fissure of Sylvius, the centres for movements of trunk and leg, of shoulder, arm, hand, and face. In a cross-section of the internal capsule the efferent fibres lie in a similar order—those for the head in front; next, those for the arm; and, finally, those for thigh, knee, foot, and toes.

In what sense are these 'psychical' centres, *i.e.* points at which physical stimulation gives rise to mental impression, or at which mental activity initiates physical action? The first scientific view, held to some extent by Munk, was that the *individual* cell was the *seat* of the sensation or mental image; images were, so to speak, stored up in the cells, much as electric energy may be stored up in an accumulator, and were touched off by stimulation coming either from the periphery (sensation proper) or from other centres of the brain (the memory-image). The destruction of the cell wholly removed the power alike of sensation, of recognition, and of recall in memory; the cutting of the path from the sense-organ to the cell removed the power of sensation, but left the memory intact; and the disconnecting of the cell with other regions of the brain made the memory-recall (recall by association of ideas) impossible, although the power of sensation remained. Some cells were sensory, *i.e.* end-points at which nerve-process was transformed into conscious sensation; others were motor, *i.e.* starting-points at which conscious volition was transformed into nerve-process. This simple 'corpuscular' theory has no longer many supporters.

(i.) The distinction between sensory and motor centres is questioned. The motor centres were held to be those at which movement might be initiated voluntarily or spontaneously, their destruction involving the loss of such power, while the movements could still be reflexly excited, through the lower brain or spinal cord centres. To the idea of such special motor centres objections are urged, both from the physiological and from the psychological sides. It is now known that innumerable sensory fibres lead from the muscles and joints to the brain, and that the muscular sensations derived from these—sensations of the extent, duration, complexity, resistance, etc., of the movements carried out, or being carried out—play a very important part in the formation and development of our ideas of space, of objective reality, and even of our consciousness of personal identity. If from any cause we cease to feel a movement that is in course of completion, the co-ordination becomes imperfect, and indeed absolute paralysis may occur. Quick, emotional speakers frequently show this in a slight degree; both the 'thick' speech and the imperfect control of the limbs in drunkenness must be largely attributed to the same cause. *Locomotor ataxia* springs mainly from disease of the posterior columns of the spinal cord, *i.e.* the sensory nerve-columns; the patient can stand and walk correctly so long as his eyes are open, but collapses when he closes them; he has no longer any sensory consciousness of the position of his limbs, and therefore his movements are paralyzed. The paralysis that occurs in dreams, the failure of actual movement during them, is largely due to a similar cause; not being conscious of the position of our limbs, we have no basis for movement. Accordingly, the motor zone may be really a *sensory* zone, as Goltz, Schiff, Munk, and others hold; or a *senso-motor* zone, as Luys, Luciani, and Horsley maintain. The paralysis that appears after injury may spring not from inability to *innervate* the muscles, *i.e.* to originate and co-ordinate the various contractions or extensions required, but from inability to *feel* the muscles in play, or to form an image of their position—a necessary antecedent to their voluntary control. It may be said, then, that the whole of the cortex is sensory in its functions; there is no doubt that in development it is closely connected with the *posterior*, i.e. the *sensory*, portion of the spinal cord; the strictly motor centres for the co-ordination of movements would then lie in the cerebellum and lower brain.* On the other hand, neither psychology nor histology offers grounds for any fundamental division between sensory and motor processes. (*a*) Every sensation is at the same time a feeling and an effort, every idea is an emotion and a desire. Consciousness is invariably accompanied by changes occurring in the muscular system, in the glands or viscera, as well as in the external muscular system. Every change of consciousness reverberates through the body, and issues outwards in action, *i.e.* every idea is *ideo-motor*. (*b*) There is no break or change apparent in the structure or prolongation of the cells as we pass from a 'motor' to a 'sensory' zone: the large pyramidal cells may be more frequent in the former, but they are not absent in the latter; the fibres are alike throughout, and it is even possible, as Apathy and Bethe hold, that the fine fibrils which make up the fibres are continuous throughout their course in the whole central system. If so, there is no real centre anywhere—no seat either of the soul generally, or of any special faculty or function of it. There is no end-point at which *nerve-process* comes to a stop and *sensation* begins; no starting-point at which volition is transformed into motion. Consciousness must be a correlate not of the functioning of this or of that part of the brain, but of its functioning as a whole. The action of the brain is equivalent to that of a higher and more complex reflex-centre, like the centres of the spinal cord. It performs similar functions also, viz. (*a*) it isolates the excitations, rendering them both more rapid and more effective; (*b*) it co-ordinates movements with greater delicacy of adjustment to different sense-impressions; (*c*) it co-ordinates movements with more effective adjustment (α) to the condition of the organism as a whole (fatigue, hunger, satiety, etc.); and (β) to the results of the immediate or of the past experience of the individual and of the race. This is the view which, though in a less extreme and materialistic form, is becoming generally accepted. The 'centre,' on this theory, would merely be an important *junction*, not a *terminus*, in the cerebral system. Its injury disorganizes the system, and does so in a definite way for each centre, just as the break-up of the railway lines at Perth would cause a different kind of disturbance and affect different systems from the break-up of the lines at Carstairs.

(ii.) A second point of dispute is whether there are different 'centres' for *sensation* and for *imagery*, respectively, within the same field of experience. Certain facts of mental pathology, and results of experiments on animals, suggest that the sensory cell or group of cells is distinct from that which underlies the memory-image.† In the case of vision, for example, two forms of blindness arise from disease or injury to the visual zone: in the one the subject is completely blind (cortical blindness); in the other he is able to see, but fails to recognize the most familiar objects (psychic- or soul-blindness): thus a dog no longer recognizes its master, its food-dish, or its kennel, except by smell. The failure to recognize might arise from one of two causes, either (*a*) the connexion had been cut between the visual region and the regions correlated with other sensations and memories, hence the sense-impression could not

* Cf. Donaldson, p. 260.

† See Ward's 'Assimilation and Association,' *Mind* [N.S.], vols. ii. and iii.

arouse its associate ideas—in other words, it could not be understood; or (*b*) the memory-image cells of the given objects had been destroyed, and hence the earlier experiences were no longer capable of revival; or, finally, both might have occurred. In man, the failure to *recognize* scenes and persons formerly familiar (psychic blindness) has occasionally occurred, while the power to *recall* visual images and other memories was unaffected. Hence three *pure* forms of mental defect may occur in connexion with injury to the occipital lobe: (α) sensory or cortical blindness, (β) perceptual or psychic blindness, and (γ) visual amnesia, loss of memory for visual images (while the power of recognition remains intact). Corresponding defects are found in connexion with hearing also, and with touch and muscular impressions.* Finally, either of the two last forms may be *partial* or limited; the most important case of such limited blindness is that called verbal blindness—loss of the power to recognize, *i.e.* to read and understand, written or printed words in one's own language. The part of the brain usually affected in such cases is the *angular gyrus*, and the *supramarginal convolution*. This, accordingly, is described as the visual word-centre. There are four such centres, two 'sensory,' and two 'motor.' Of the former, the second is the auditory word-area (called Wernicke's area), in the first temporal convolution; with it is connected the recognition and understanding of heard speech, of spoken words. The two others are the *articulo-motor* area (Broca's centre, referred to above), at the foot of the third frontal convolution; and the *graphomotor* area in the second frontal convolution. Injury to these centres gives rise, in the one case, to loss of the power to utter speech, in the other, to loss of the power to write, in one who has already acquired it. All four centres are located on one side of the brain only—the left side (except, it is said, in left-handed people, with whom the speech-centres are on the right side of the brain). Pure or unmixed forms of any of the mental diseases referred to as aphasia rarely occur, but when they do they are sufficiently striking. Thus a patient may be able to speak, to write and to read, intelligently, and to hear sounds of all kinds, but cannot understand words spoken to him in his own language. This is pure acoustic (sensory) aphasia. It is obvious that persons, blind deaf-mutes, for example, who have learned to read by touch, and to speak with the fingers only, will have different centres from the normal ones, viz., a sensory centre for *tactual* word-images, and a 'digito-motor' centre for gesture and word-making. The language-centres, as is clear from their position, are merely extensions of the ordinary centres for (*a*) visual, auditory and tactual impressions; and (*b*) the kinæsthetic impressions of mouth and throat or hand movements.

It has been supposed, however, that the different *horizontal* layers of the cortex may have diverse functions corresponding to sensation, percept, and image. Both the psychological analysis and pathological evidence prove that the image is not simply a fainter copy of the sensation; it is not even a 'composite' picture derived from a number of successive sensations of the same kind. Thus, the idea that the image corresponds to a weaker excitation of the same nerve-cell or group of nerve-cells as that with which the sensory-impression was connected is no longer seriously held. There is, and can be, no memory of a pure sensation: memory is of a percept, and therefore of a sensation only so far as it forms part of a percept, that is, part of a complex total group or series of impressions. Again, the simplest perception involves elements belonging to more than one sense-region, taste *plus* odour sensations, visual *plus* muscular impressions, and the like; on the other hand, the same sensation enters into innumerable combinations with others, both of its own and of other kinds. A memory image differs from its corresponding percept not only in *content*, i.e. in containing fewer of the characters of the real objects than were perceived in the direct experience, but also in its *accompaniments*—in the absence of those factors which give 'reality' to the percept, the bodily sensations from the accommodating muscles of the sense-organs, and from the limbs, which have reflex tendencies to action in the presence of every 'real' experience. It is true that what is 'real' to me may not be real to my neighbours, in which case my supposed perception is in fact an imagination: it is for me, however, indistinguishable from a perception, and is acted upon as one, simply because it has all the marks of one.

* Thus in Heubner's case the subject could repeat any word spoken to him, but could not understand its meaning. It was a mere blur of sound. His 'hearing centre' was found to have been isolated by a lesion, *i.e.* its connexion with other centres had been destroyed.

Thus, the differences in brain structure and function which might be supposed to correspond to the differences of sensation, perception, and memory are the following:—(*a*) *Complexity*: the sensation is correlated with the smallest group of cortical elements, confined to a small more or less definitely localized area; the perception with a larger number, belonging to different areas; the memory-image with a still larger number. The connexions with motor centres in the lower brain are probably equally diverse, and have the same rising scale of complexity. (β) A result of these factors is the *functional* difference, that sensation, perception, memory correspond to cortical processes which are increasingly difficult to excite, which offer a *greater resistance*, therefore require an increasingly strong stimulus, unless where habituation has weakened their resistance-force; which are more unstable, more dependent upon the condition of the body, or of the brain, as a whole, therefore more uncertain; the reaction or response taking a longer time, being more complex and modifiable according to a wider range of conditions, as we pass from sensation to perception, and from perception to imagery. Being the most unstable, the physical basis of the memory-image is also the most likely to suffer, both from chemical deterioration of the blood supply to the brain (as in fatigue, illness, senile decay, etc.), and also from any physical shock to the cerebral system. So in an electrical system, the more numerous the 'connexions' the more likely is a derangement to occur, and the more serious is it when it does occur.

(3) Some writers have gone farther still in their localization, and have determined centres of *association* (Flechsig), of *attention*, of *intelligence*, or of *apperception* (Wundt). Certain regions of the cortex lying between the various sensory centres, and especially the greater part of the frontal lobes, have no special functions that are determinable either by stimulation or by excision in animals, or by the comparison in man of mental symptoms during life with *post-mortem* examination of the brain after death. If defect is obvious at all, it appears to be general: the animal is stupid, irresponsive, mentally sluggish; it lacks spontaneity, and liveliness in its actions. In man, the onset of dementia in old age, or after some severe shock, is frequently found to have been conjoined with extensive degeneration of the frontal lobes. Again, it is here in the main that the wide difference between the human and the lower animal brain is most marked, while Flechsig has shown that in a child's brain the connexions of the sensory areas

with the sense-organs and with the lower motor centres are complete a considerable time before the connexions between the frontal lobe cortex and other parts of the brain are perfectly formed. Microscopic examination also shows that these areas have innumerable connexions with the different sensory areas, as well as with the opposite hemisphere and with the lower centres; the former connexions are the so-called 'association fibres.'

The power of abstraction or generalizing, which is the basis of *intelligence*, consists in (*a*) the summarizing of similar experiences, (*b*) the combination of diverse experiences, (*c*) the bringing of these results to bear upon new experiences (adaptation). The main process by which this is achieved is the formation of a type-idea, a representative idea of some kind, of which the *name* is the concrete symbol or counter. Whether the name be a spoken, written, or printed word, or a mere gesture, is immaterial: its relation to the type-idea, and to the many experiences from which the type-idea has been derived, is the same. The name may not be essential to the type-idea, but it is necessary to its communication and to its development: it gives it the necessary fixity and stability. The simplest assumption, accordingly, for the physical basis of intelligence appears to be that of a hierarchy of cell-groups; group V (visual, in the occipital lobe) is connected with group A (auditory, in the temporal lobe) through an intermediate group I (in the intervening or some other area): the excitation of the whole system, V-I-A, gives a combination of the visual and auditory images. Thus, when I see a bell, the excitation of the cortical area V, on which the perception directly depends, passes on to I and A, and thus gives rise to the thought of the *sound* of the bell. There can be no doubt that the great difference between human and animal intelligence depends upon the greater readiness with which these 'associations' are formed, and the rapidity with which they can be called up. It may readily be granted that in the synthesis of diverse sensations and memories into ideas and thoughts, an increasing number of connexions are laid down between different groups of neurones; and central stations will come into existence between the different regions, uniting them with each other and with remoter parts. In this sense, and in this sense only, the frontal lobes may be regarded as the centre for intelligence; they form the largest or most extensive of these intermediary regions.

Diseases and defects of the frontal lobes are frequently accompanied by defective power of attention or concentration (cf. Ribot, *Psych. de l'Attention*), suggesting that this region is the 'centre of Attention.' It is said, however (Schäfer, *Text-Book of Physiology*), that only 20 per cent. in a large collection of cases of injuries, involving the frontal lobes alone, showed evidence of intellectual deficiency accompanying the physical defect. In Goltz's dogs, loss of intelligence was apparent whether the *front* or the *hind* parts of both hemispheres were removed. In the former case, however, the animal became savage and ill-tempered; in the latter, it became gentle and good-natured. What is lost, according to Flechsig (1896), by degeneration of the frontal lobes, is the idea of the self as capable of action—personal interest in outer or inner events, the power of volition, of directing the attention upon this or that. In other words, the frontal lobes, as Wundt implies in calling them the apperception-centres, represent central stations by which new connexions, connexions based on individual experience, are formed between the various particular centres, by which impressions are grouped and correlated, not according to their kind, but according to their bearing on the purposes and aims of the individual. An animal deprived of the frontal lobes can no longer make use of its acquired skill or experience; it falls back to the level of instinctive action and perceptual consciousness. A human being in whom the frontal lobes are undeveloped remains at the level of the infant in intelligence, although he may, should he live, show the instincts and passions of the man.

We may conclude: (i.) that so far as consciousness is concerned the brain areas are *primitively indifferent*. In the nature of things there is nothing to prevent cases occurring in which the so-called visual area is found to be in the service of the auditive consciousness; as a matter of fact, relatively wide variations do occur in the positions of the different centres.

(ii.) In the course of development, a centre is formed not as a *terminus a quo* or as a *terminus ad quem*, but as a connecting station, by which, *e.g.* afferent and efferent fibres may be brought into relation with each other, according to the needs of the organism.* The evolution of the brain as the great *locus* of these connecting points has brought it about that the principal stations are mainly within the same neighbourhood in different individuals. Organic selection also has determined that the right side of the body should be 'served' by the left side of the brain, perhaps because a right limb is more frequently and extensively exercised than a left limb, while the blood is more rapidly and effectively circulated through the left hemisphere (as Wundt suggests): the right *limb* requires more frequent renewal of its material, etc., which the left *brain* is more able to supply. Hence functions which are not bilaterally developed, such as those involved in speech, the appreciation and production of music, mathematical calculation, etc., are also relegated to the left side of the brain. (Language was primitively gesture, involving chiefly actions of the *right* hand.)

(iii.) The localization is not fixed, however, even for the individual. (*a*) Some peculiarity of training may lead to the adoption of the right hemisphere as the field with which the functions of speech, etc., are correlated, or may cause a dislocation of particular centres.† (*b*) After injury to a centre, and the loss of any particular mental ability, the loss may be made good by practice, by re-learning or the like, and thus a new centre becomes trained for the functions which the defective centre performed. This *compensation*, or *vicarious functioning*, may take place either through neighbouring areas or through the symmetrically opposite region in the other hemisphere taking over the function. (*c*) It must be added that in man this compensation is limited in range: if a sensation area is completely destroyed, no recovery of the corresponding sensibility takes place; but the patient may learn to use other sensations to replace those he has lost, as guides for action. Thus a person who has become blind in one half of the field of vision (hemianopsia) cannot after a short time be distinguished in his actions from a normal individual. In the case of higher functions, as thought and speech, the patient may re-build his knowledge upon new material: a 'visualist,' whose visual imagery has been taken from him, and who accordingly has lost the ability to read, may re-acquire it

* Cf. Foster, p. 1060, on the cortical motor area and pyramidal tract: 'We are driven to regard them rather as links, important links, it is true, but still links, in a complex chain.'

† Cf. Bateman, p. 350, on the variations in the 'centre' for language; Foster, p. 1065: 'The passage of nervous impulses . . . is not rigidly and unalterably fixed by the anatomical distribution of tracts of fibres.'

by using the sensations of movement as his materials, and correlating these with the optical impressions. (*d*) In comparing different animals in regard to the effect of excising portions of the brain, it is found that the lower the animal stands in development, the more complete is the recovery from loss of any particular brain-organ likely to be; in other words, the remaining parts more rapidly take up the functions of those removed, and in this case the lower brain-centres appear to act as vicarious organs as well as the neighbouring and symmetrically opposite centres. Even the apparently complete loss of the cerebral lobes from both hemispheres may not permanently destroy the sensibility or general capacity of the dog. Substitution and compensation are rarer in the monkey than in the dog, rarer and less complete in the dog than in the rabbit, in the rabbit than in the pigeon, etc.

(iv.) When new impressions are received, or new ideas formed, it may be supposed that some new portion of the cerebral cortex becomes functionally active: this probably occurs through its entering into contact with other cell-groups. The undeveloped portions of a child's or of an uncultured person's brain cannot, of course, be wholly *inactive*, but they remain simple in structure and form; with use they put out prolongations, and enter into touch with others, while at the same time they become more highly differentiated within themselves; with deficient exercise of a developed cell, the opposite processes of contraction and degeneration set in. It may be added that exercise appears to increase the vitality of the brain, and hence the vitality of the body as a whole (Donaldson, chs. 16 and 17). Capacity for work or exercise depends in its turn on interest, and finally on the will of the subject. Hence the remarkable freshness and vigour of intellect which some men have shown even in extreme old age (Thomson, p. 274).

This leads to the final question, *Which is primary, the brain or the mind?* Does the brain with which he is born determine the character and capacity of each individual, or do his character and capacity, *plus* the environment in which he is set, mould and form the brain into an efficient instrument for themselves? There can be no doubt that, as in all such cases, *both* questions may be answered in the affirmative. A child born with an imperfect brain can never achieve a rational mind, and the man with the most perfect brain will *tend* to be foremost in his occupation (which may be that of a philanthropist or that of a 'sharp') and neighbourhood. But the greatest weight in individual life, and the *whole weight* in evolution, must be laid on the two factors of opportunity and use. That is to say, the mind itself and the environment determine between them the structure of their intermediary—the brain. Consciousness is correlated not with any limited section of the brain, but with the whole brain, indeed with the whole nervous system. We may go further and say that consciousness is a response to the functioning of the whole living organism; and that the mind, through the feelings and the will, is '*dynamic*' to the whole organism; in other words, that the action and reaction we have postulated between body and mind are between body *as a living whole* and mind as a *unity*, as an unextended system of qualitative determinations and tendencies. As de Sanctis has said, 'an idea cannot be the uniform and invariable product of a pyramidal cell (the *psychic* cell of Cajal): it exists only at the moment of its appearance, and for the appearance there is required the synergic concurrence of almost all the elementary activities of the brain, *i.e.* the functioning of manifold systems of all kinds of neurones' (*Fenomeni del Contrasto*, pp. 75, 76 note). Cf. Loeb, ch. 17: 'The cerebral hemispheres act as a whole and not as a mosaic of a number of independent parts.' The anatomical localization of fibres is not a 'psychic localization of functions.' This is especially true of the higher ideas, abstract and general ideas, ideas of relations, etc. The formation, the use and the adaptation of a general idea involve not a single group of cells in the frontal lobes or elsewhere; but systems in different parts of the cortex, some acting with greater intensity, some with less, and so in a gradually decreasing scale, all parts of the nervous organism being more or less affected. The localization of functions means that certain parts of the cortex have by their primitive connexions with sense-organs or muscles or both, and by their use in the life of the individual, become centres more readily excitable by particular forms of stimulation. The destruction of such a centre renders the corresponding process impossible until a new area has been educated, *i.e.* has been brought into connexion with the same sensory or muscular organs as the original area. In many cases this may no longer be possible. A large part of the brain may, however, be destroyed without any gap in the mental field, or any serious defect in the mental capacity being observable. A case is reported in which the whole of the right hemisphere was affected, the front portion being entirely void of grey matter, and the remainder degenerate; yet the only symptom manifesting itself was a paralysis of the left side; this had begun ten years before death (Bailey, 1889 [reported by Thomson, p. 63 f.]).

In general, the *degree* of consciousness appears to be correlated with the amount of resistance which is overcome. Learning new ways is always accompanied by intense consciousness, as shown by the concentrated attention it involves, while it also involves a large expenditure of energy, as shown by the readiness with which fatigue occurs. The more familiar the action becomes, the less the intensity of consciousness, until the latter may be wholly latent, as in many of the automatic actions the civilized man goes through in the course of a day. This does not mean that the nerve-process has been 'short-circuited,' that it takes place through lower, reflex centres, and therefore by shorter paths; it means rather that with the same path the resistance is less, and therefore the current flows more rapidly. On the other hand, whatever increases the resistance increases the intensity of consciousness involved in the action. Many poisons, whether of external or internal origin, have this effect. In some forms of insanity, the simplest actions—speaking, walking, or dressing—are accompanied by vivid and painful consciousness, and at the same time by such extreme physical exhaustion that the patient soon becomes quite unable to carry them out. In such cases a very strong stimulus may occasionally overcome the great resistance, and the normal reaction takes place. Thus an overwhelming emotion has been known to do so.

In verbal amnesia, a parallel instance is that known as Wolff's case (cf. Loeb, p. 281).* The patient in this case could not tell the names of objects or their qualities except when some actual sensation was given him: thus he could not say whether sugar was sweet unless he *tasted* it, or whether snow was white or black, unless he *saw* it. Mainly it was the visual sensation that was most effective; but in general the most vivid or most striking sensation was that which was required to arouse the idea or memory. An umbrella, for example, could be named only when it was seen *open*.

We may conclude, then, that the brain-connexions vary in the greater or less resistance they offer to excitation; that consciousness is a correlate of

* For another case see Bateman, p. 103.

high resistance; habituation, automatic action, of low resistance: and the higher the resistance, the stronger the impression that is required to 'touch off' the conscious process as a whole in any given case. In amnesia of all kinds, the most *complex* mental achievements or the most *recent* memories are the first to fail: thus a Bohemian peasant learnt German when he entered the army; after some time, at sword practice, his brain was accidentally pierced; his German failed him, but he retained the power of speech in his native tongue (Adamkiewicz; for other cases see Bateman p. 188). In such cases the brain-associations which are least firmly fixed (either because of their recentness or because of their complexity), *i.e.* those which offer greatest resistance to excitation, are those which first fail in their functions; and in recovery from the disease or injury the order is the reverse, the last memories to return being those of the events immediately preceding the illness, etc. These are only a few of the phenomena which make it certain that the relation between mind and brain is functional, not structural, except so far as structure follows and is determined by function; that the general function served by the upper brain is to correlate the results of past individual experience, as the lower brain correlates those of race-experience, with present and immediate needs and situations, *i.e.* retention and co-ordination; but that individual mental activity is the essential condition both of retention and of co-ordination; that, accordingly, the brain is mainly the instrument, the means, rather than the cause or condition, of mental development.

BRANCHES AND TWIGS.—Branches and twigs are used in a variety of rites and ceremonies, and their use is generally conditioned by the sacred nature of the trees from which they are taken, though this is not always the case.

1. Ritual.—In the ritual of primitive peoples, other ceremonial articles being few in number, branches and twigs have a prominent place. Thus, among the Australian tribes, they are used in a great variety of rites. In the fire ceremony of the Warramunga tribe, huge torches are prepared, made of saplings 15 feet long, thickly encased in a mass of gum-tree twigs; while another part of the ceremony consists in the erection of a long pole to which gum-tree twigs are attached. The men of the tribe at this rite enter a *wurley* made of boughs, and sing there for hours. Bunches of similar twigs are also attached to different parts of the body (Spencer-Gillen[b], p. 380 ff.). At mourning ceremonies, widows of the dead man mourn under the shelter of a bough *wurley* (*ib.* p. 521). In these tribes the dead are often left on a platform of boughs erected on a tree (*ib.* p. 517). Further, at the totem ceremonies of the Kingilli tribe, each performer wears on either thigh what is known as a *tjintilli*. This consists of a central stick, about a yard long, to which are attached a number of leafy green gum-twigs (*ib.* p. 198). A bamboo, to which is tied a leaf of the sago-palm, is used by some tribes in New Guinea to indicate tabued articles (Haddon, *Head-Hunters*, London, 1901, p. 270 f.). But at higher levels, branches and twigs are variously employed. Thus in Japan, at the festival of first-fruits, a place for the *inami-dono*, or rice fruit hall, is chosen by divination and marked out at the four corners by twigs of the sacred evergreen tree, hung with tree fibre. In the setting apart of a portion of rice field, two *sakaki* twigs are planted (Aston, *Shinto*, London, 1905, p. 269). In the Hindu village ritual-marriage of Śiva and Pārvatī, clay images of the divinities are attached to the ends of forked branches, the prongs of which are stuck into heaps of grass and flowers (*IA* xi., 1882, p. 297 ff.). The pious Hindu also uses for the ceremony of teeth-cleaning a twig or small stick, which is cut fresh every day (Monier Williams, *Rel. Thought and Life in India*, London, 1883, pt. i. p. 376). Again, Pliny says of the Celts that they used oak branches in nearly all their ceremonies (*HN* xvi. 44). At the Greek Olympic games the victors' crowns were made of branches of sacred olive, cut with a golden sickle by a boy whose parents were both alive (schol. on Pindar, *Olymp.* iii. 60). The Jews, during the feast of Tabernacles, connected with the ingathering of the fruits of the land, dwelt in booths made of branches of olive, pine, myrtle, willow, palm, and of 'thick trees' (Lv $23^{40ff.}$, Neh $8^{14ff.}$). It is probable that this custom arose out of the practices of an earlier cult of vegetation (see § 5).

2. Lustration.—In lustration, branches and twigs form a natural, and therefore a primitive, form of asperger for sprinkling water or blood over the worshippers, or over sacred objects. In such a ceremony their use is doubtless wider than can now be ascertained, as the method of sprinkling is not always clearly reported. At the native baptismal ceremony in Polynesia, the priest asperged the child with a green branch or twig dipped in water, to the accompaniment of archaic prayers (Tylor[4], ii. 430; BAPTISM [Ethnic], § 7). Lustration ceremonies among the Romans were frequently performed by means of branches of laurel or olive. Ovid speaks of the moistened laurel bough sending forth the sprinkled water at the *Palilia* (*Fasti*, iv. 721 ff.), and describes the rites at the fountain of Mercury, where traders sprinkled themselves and their goods with a dripping laurel branch dipped in its waters (*ib.* v. 663 ff.). Among the Semites, branches and other parts of sacred trees were used for lustrations (W. R. Smith, p. 178). Certain of the sprinklings in the rites of purification used by the Hebrews were performed by a bunch of hyssop. Thus, water was sprinkled with hyssop by a ceremonially clean person over the persons and things which had come in contact with a corpse (Nu 19^{18}). Hyssop and cedar wood, the latter probably in the form of a twig, were also used in the ritual of cleansing the leper or the leprous house (Lv 14); and, in the account of the origin of the Passover, a bunch of hyssop is ordered to be dipped in the blood of the lamb, and used to strike the lintel and doorposts (Ex 12^{22}; cf. also He 9^{19}, Ps 51^{7}). In Scandinavia the blood of sacrificed animals was collected in bowls and sprinkled over the altar, temple walls, and people by means of *blautteinar*, or sortilege twigs (Vigfusson and Powell, *Corpus Poet. Boreale*, Oxford, 1883, i. 403 f.; Simrock, *Handb. der deutschen Myth.*, Bonn, 1887, p. 509; de la Saussaye, *Rel. of*

the Teutons, Boston, 1902, p. 376). Sometimes sacred twigs were placed in water which was to be used ritually, as in the Lapp ceremony of baptism, in which sacred alder twigs were used in this way (Tylor[3], ii. 437; cf. BAPTISM [Ethnic], § 7 [5] and [8]). In other cases, a branch is used by itself as a means of purification. In the New Hebrides, it suffices to draw a branch down the body to remove the contagion or defilement (*JAI* xxiii. 12), or, as in Japan, at the new moon ceremonies a branch of *sakaki* is waved in token of the purification of sins (Aston, p. 292). Scourging or beating with branches, whose sacred or magical virtues are supposed to drive away evil influences, is not uncommon (see AUSTERITIES, § 5; de la Saussaye, p. 376; Frazer, *GB*[2] iii. 98, 126–133, 217 ff.).

3. **Sacrifice.**—In sacrifice, branches and twigs are frequently used. In the more primitive forms of sacrifice by fire, the fire is naturally fed with branches. But occasionally branches and twigs of some sacred tree are thrown upon the fire or are burned for purposes of purification or to bring good luck. Instances are found in the burning of cedar and hyssop in the Hebrew sacrifice of the red heifer (Nu 19[6]), the Roman custom of throwing laurel on the sacrificial fire or on the hearth (Granger, *Worship of the Romans*, London, 1895, p. 305; Ovid, *Fasti*, iv. 741), the Hindu feeding of the sacred hearth fire every morning with pieces of consecrated wood generally taken from the *Palāśa-tree* (Monier Williams, pt. i. p. 366), etc. Reference may also be made to the images, made of osiers, within which human victims were consumed by fire among the Gauls (Cæsar, *de Bell. Gall.* vi. 16). For probable late survivals of this custom, see Frazer, *GB*[2] iii. 320 ff. Branches or twigs of sacred trees sometimes accompany offerings; thus, in Scandinavia, twigs were cut from special kinds of trees, and these, interwoven with flowers, were afterwards fastened to the tails of animals intended for sacrifice (de la Saussaye, p. 376). A Hindu instance is that of the balls of rice used in the funeral ceremonies, in which sprigs of the *Tulasi* plant are inserted (Williams, p. 302). Or, again, they are offered as sacrifice, as in the case of the Japanese *kedzurikake*, wands of elder or willow, whittled at the top into a mass of shavings, which are also symbols of deity and fetishes (Aston, p. 191 ff.). Among the Ainus similar wands of willow or lilac, called *inao*, are both sacrifices and fetishes (Batchelor, *The Ainu of Japan*, London, 1892, p. 87 ff., *The Ainu and their Folklore*, London, 1901, p. 92 ff.; see also AINUS, § 23 ff.).

4. **Divination.**—In certain processes of divination the use of branches and twigs occurs. Tacitus says of the ancient Germans that, in order to consult lots, they cut off the twig of a fruit-bearing tree and made it into little wands. Upon these they put distinguishing marks and scattered them at random upon a white garment (*Germania*, ch. 10). These twigs, whether or not the marks on them were runes, are probably connected with the Norse sortilege twigs, or consecrated chips used in divination, and the Frisian *tein*, or twigs, used for casting lots in judicial procedure (de la Saussaye, p. 394; Vigfusson and Powell, p. 411; Simrock, p. 531). For a similar Celtic instance see CELTS, § xiii. (4). Here, too, may be noted the wide-spread use of the divining rod, a forked twig, usually of hazel. The forks of the twig are held, one in each hand of the seeker, and the twig twists in his grasp when he arrives at the spot under which what he seeks is concealed (Barrett, 'The so-called Divining Rod,' in *Proc. Soc. Psych. Research*, 1897; Lang, *Making of Religion*, London, 1898, p. 164 ff.; Baring Gould, *Curious Myths of the Middle Ages*, London, 1868, p. 55 ff.; see also DIVINATION).

5. **Vegetation-cults.**—Many folk survivals show the uses of branches and twigs in connexion with vegetation-cults. Under various names (Jack-in-the-Green, etc.) and at various times puppets are made of green stuff, twigs, and branches; or selected persons are clad in green boughs, leaves, and flowers, and undergo various ceremonies. These represent the old tree-spirit, or spirit of vegetation, though now no longer regarded in that light by the folk. At such times, also, especially after the ceremony of 'carrying out death,' boughs are cut and brought home to the village, and these have also some connexion with the spirit of vegetation. Many instances of these are collected by Frazer (*GB*[2] i. 214 ff., ii. 82 ff.), and by Grimm (*Teut. Myth.* pp. 769, 772, 775, 784 ff.). The power of the tree-spirit is communicated also to the fields by placing a branch in the furrow, or by carrying branches round the fields, and it is also conveyed to houses which are decked with branches at the times of the old pagan festivals, May-day and Midsummer, and, under Christian influences, at Christmas—probably a survival of the practice at the festival which began the winter season (Elworthy, *The Evil Eye*, London, 1895, p. 103; Brand, *Popular Antiquities*, London, 1870, i. 71, 121, 125, 173, 174, 246 f., 288 ff.; Grimm, pp. 778, 786; *GB*[2] iii. 276 f.; for decking houses at weddings and funerals, and for Palm Sunday customs, see Brand, i. 71, ii. 71 ff., 175). The connexion of the branch with the vegetation- or fertility-spirit is seen in an Irish instance when a bough set up on the house on May-day is supposed to produce plenty of milk during the summer (Brand, i. 131). Branches or twigs from trees regarded as sacred, the rowan, the elder, etc., were placed on houses, stables, sheepfolds, and barns as a protection against evil spirits, witches, and other evil influences. They were also placed in boats, or carried on the person as a talisman. These practices occur very widely in modern European folk custom (*GB*[2] iii. 132, 261, 265; Elworthy, p. 347; Brand, i. 151; MacCulloch, *The Misty Isle of Skye*, Edinburgh, 1905, p. 237). But that it is derived from ancient paganism is shown by similar practices among pagan peoples (Ovid, *Fasti*, iv. 721 ff., vi. 151 ff.; de la Saussaye, p. 376 f. [Scandinavians]; Monier Williams, p. 296 [Hindus]; for the Parsi custom see BARSOM). The Midsummer and other bonfires, as well as the need fire, were fed by branches, twigs, and leaves of oak, especially in Celtic and Teutonic districts (Grimm, p. 605); in the case of need fires, nine sorts of wood were used in Sweden and elsewhere (Grimm, p. 607; *GB*[2] iii. 270, and *passim*). Through these fires cattle were driven, and burning brands or branches were carried through the fields or villages, and set up in the fields (*GB*[2] iii. 313; Brand, i. 215; Grimm, p. 621; de la Saussaye, p. 375 ff.). New fires were lit on the hearth with blazing brands from these fires or with branches lit at their flames (*GB*[2] iii. 245). Brands were also taken from the bonfires and kept in houses or in cattle-sheds, as preservatives against thunder and lightning, fire, and other evils, or were carried about for luck (*ib.* p. 254 ff.). In some cases walnut-branches are carried by the people in procession round the fire or passed over it, and then placed on the cattle-sheds, or the backs of cattle are singed with a hazel-twig lit at the fire, or birch boughs are thrown into the fire, in Russia, to cause the flax to grow to the height of the boughs (*ib.* pp. 275, 284, 291). The fires are sun-charms, and the brands have the virtues of the fire and the sun, which they impart to field, house, or hearth, promoting growth of crops, warding off evils, bringing luck, etc.

Connected with the cult of sacred trees was the practice of hanging sacrificial offerings upon their

branches. This practice has occurred wherever tree-worship is found, or where worship took place in sacred groves (see art. TREES; and, for particular instances from South America, New Zealand, and among the Dayaks, cf. Tylor[3], ii. 223 f.; for the Semites, cf. W. R. Smith, p. 169; for the Scandinavians, cf. de la Saussaye, p. 356; and for the Celts, Jullian, *Recherches sur la Religion gauloise*, Bordeaux, 1903, p. 55). Among the Japanese, presents to a superior were delivered attached to the branch of a tree (Aston, p. 215).

In the ritual of healing at sacred wells, a rag which has been in contact with the patient, or part of his clothing, is hung on the branches of a sacred tree near the well, either as an offering or as a magical means of conveying the disease to the tree or of bringing the sufferer within the healing influence of the tree-spirit (see Tylor[3], ii. 150; Brand, iii. 10). Sacred wells are also decked with green boughs on certain occasions, *e.g.* Holy Thursday and the day of the saint to whom the well is dedicated (Brand, iii. 9).

Where sacred trees are venerated, either in actual cult or in late folk-survivals, it is considered sacrilegious to break even a twig from them. To do so will be followed by a punishment, misfortune, or ill-luck. The same is true of trees growing on graves (Tylor[3], ii. 115 [Malagasy]; W. R. Smith, p. 169 [Semites]; Elworthy, p. 99 [Livonians]; Brand, iii. 13 [Celts]; Mackenzie, *Ten Years North of the Orange River*, Edinburgh, 1871 [Bechuanas]).

Branches are also used in rain magic in a variety of ways, probably because the tree-spirit was originally believed to have influence over the weather. Thus, among the Congo people, mounds are covered with branches of trees and fetish-ornaments. Round these mounds a priest walks, muttering incantations (Reade, *Savage Africa*, London, 1863, p. 363). Pausanias mentions a temple on Mt. Lycæum, whose priest had power to produce rain by throwing an oak branch into a fountain (viii. 38). In Gaul, a naked virgin standing up to her knees in the river was asperged by her companions with branches dipped in the water, as a charm to produce rain (Grimm, p. 593).

The ceremonial cutting of the mistletoe from the oak by the druids, and its use in magico-medical rites, are described by Pliny (*HN* xvi. 44). Frazer connects this rite with the Scandinavian myth of Balder, slain by the mistletoe, and with the plucking of the bough from a tree in the sacred grove by the slayer and successor of the priest of Nemi. The mistletoe was regarded as the soul of the oak, and had to be plucked before the tree, in which dwelt the spirit of vegetation, could be destroyed, or the human representative of the same spirit could be slain (*GB*[2] iii. 446 ff.; FESTIVALS [Celtic]). Mistletoe is also ceremonially plucked in modern folk-custom in Scandinavia, and elsewhere in Europe (*ib.* p. 348). For the bough which had to be plucked by Æneas, before his descent to the under world, see Virgil, *Æneid*, vi. 203 ff.; and for the magic silver boughs of Celtic myth with their precious fruits, see BLEST, ABODE OF THE (Celtic).

See also BARSOM.

LITERATURE.—The literature has been given fully throughout the article.

J. A. MACCULLOCH.

BRAWLING.—The word 'brawling' is technically used in English Law for the offence of quarrelling or creating a disturbance in a place of worship, churchyard, or burial-ground. The word is derived from the French *brailler*, 'to be noisy,' which gives the main idea of the term, viz. the disturbing of people at their devotions.

I. Legal.—Brawling is a branch of sacrilege, though the latter term is now usually confined to the robbery of churches. The punishment for sacrilege in most countries up to the date of the French Revolution, and later, was death. In England, sacrilege involving the taking of goods from a church or chapel remained a capital offence till 1835, being abolished by statute 5 & 6 Will. IV. c. 81. Brawling, however, had always been treated more leniently. The most vindictive of the English 'brawling' statutes requires merely that the offender shall be adjudged to have one of his ears cut off, or (what a comment on the customs of the period!), if he have no ears, to be marked and burned in the cheek with a hot iron having the letter F, whereby he may be known and taken for a fray-maker and fighter; in addition, of course, to the usual excommunication.

With reference to this law, it must be said that the Act was passed in 1552, a time of great religious disturbance, when the change of religion was taking place in England, and that there had been a good deal of open fighting with weapons, even in churches; so that strong measures were necessary. It must also be said that these barbarous penalties applied only to persons who actually smote with a weapon or drew a weapon with intent to smite. Those who merely 'smote' without weapons, or only 'chided,' received much lighter punishment.

This Act (5 & 6 Edw. VI. c. 4) remained on the statute-book till 1829, in company with many other statutes of our Draconian code. The principle, however, still exists that disturbances in sacred places deserve greater punishment than those occurring elsewhere; in fact, some acts of disturbance which are commendable if done in another place are criminal if performed in church; for example, arrests by virtue of legal process. This principle seems to be recognized in all countries, and in France during the Revolution protection was extended to religious services of all kinds.

In England, at present, brawling by a layman, which by the Act of 1860 (23 & 24 Vict. c. 32) is defined as being riotous, violent, or indecent behaviour in a place of worship (as also molestation of a minister while celebrating any divine service in church), is no longer punishable by the ecclesiastical courts, but as a civil offence it is a misdemeanour under several statutes. The penalty under 52 Geo. III. c. 155 is £40; under 23 & 24 Vict. c. 32, £5. The statute 24 & 25 Vict. c. 100 § 36 enacts as follows:

'Whosoever shall, by threats or force, obstruct or prevent, or endeavour to obstruct or prevent, any clergyman or other minister in or from celebrating divine service or otherwise officiating in any church, chapel, meeting-house, or other place of divine worship, or in or from the performance of his duty in the lawful burial of the dead in any churchyard or other burial-place, or shall strike or offer any violence to, or shall, upon any civil process, or under the pretence of executing any civil process, arrest any clergyman or other minister who is engaged in, or to the knowledge of the offender is about to engage in, any of the rites or duties aforesaid, or who, to the knowledge of the offender, shall be going to perform the same or returning from the performance thereof, is guilty of a misdemeanour, and, being convicted thereof, is liable to two years' imprisonment with or without hard labour.'

The offender may also be fined and required to give sureties (*ib.* § 71).

Also, by the Burial Law Amendment Act, 1880, provision is made to prevent improper conduct at burials.

Under 23 & 24 Vict. c. 32, any constable or churchwarden of the parish has power to apprehend the offender and take him before a justice. There is an appeal to Quarter Sessions from a conviction under this Act.

A man may be convicted for brawling, although acting in the *bona fide* assertion of a claim of right, and that independently of the question whether the claim is a good one or not (*Asher* v. *Calcraft* [1887], 18 Q.B.D. 607).

It was held, by London Quarter Sessions, that under this Act the behaviour must be really riotous, violent, or indecent; mere protests in words are not sufficient.

In a case where in a Church of England church a crucifix was placed on the altar steps and the congregation crawled up, two by two, to kiss it, and a person present took up the crucifix and said (holding it above his head) in a loud voice: 'In the name of God I protest against this idolatry,' it was held that violent conduct or brawling was not proved (*Kensit* v. *Ross* [1898], 62 J.P. 489).

But, on the other hand, in a case which went to the Divisional Court, where, in answer to the invitation in the ordination service a statement was read in a perfectly orderly manner, this

was nevertheless held to be brawling (*Kensit* v. *St. Paul's Chapter* [1905], 2 K.B. 249).

A minister of religion can commit the offence of brawling as well as a layman (*Vallancey* v. *Fletcher* [1897], 1 Q.B. 265), and may, if a minister of the Church of England, be punished in the ecclesiastical instead of in the civil court (*Girt* v. *Fillingham* [1901], P. 176). This is obvious if he indulges in an open quarrel or wordy warfare in the sacred place; but he also commits the offence if he uses violent language, unsuitable to public worship, either in the course of his sermon or at any other part of the service, or 'improves the occasion' against individual members of the congregation in a violent or scolding manner.

Instances of this have come before the courts in the case of clergymen of the Church of England, who are strictly bound (during prayers), by the Acts of Uniformity, to the words prescribed for use. Thus in one case a clergyman interpolated, when reading the lesson, the following: 'I have been accused by some ill-natured neighbour of making alterations in the service; I have done so now and shall do so again, so mark.' In another case the clergyman paused in the service to deliver a long address in a chiding, quarrelsome, and brawling manner, in which passages like the following appeared: 'You were perhaps surprised at the pause I made at the end of the prayer [in the Litany], but it reminded me of my enemies.' 'Some one in the congregation has had the audacity to write to the archdeacon.' 'Who has had the audacity to do this?' 'Some one has committed perjury against me.' 'Another of my enemies has written a letter to the bishop full of falsehoods.' Such conduct is punishable.

The object of the laws of England is well put by Sir John Nicholl in the case of *Palmer* v. *Roffey*, 2 Addams 144. It is to protect the sanctity of those places and their appurtenances set apart for the worship of the Supreme Being and for the repose of the dead, in which nothing but religious awe and Christian goodwill between men should prevail, and to prevent them from being converted with impunity into scenes of human passion and malice, of disturbance and violence. The sacredness of the place being thus the object of this protecting law, it is no part of a legal inquiry, when more than one person is implicated in the transaction, which of the two persons so implicated is more to blame or which of them began the quarrel. Each who engages in it violates the law; each is bound to abstain from quarrelling, chiding, or brawling in the sacred place. Therefore, as Blackstone (*Commentaries*, iv. 145) says, 'mere quarrelsome words, which are neither an affray nor an offence in any other place, are penal here.'

Churchwardens, however, and also constables may, for the purpose of maintaining order during Divine service, eject disturbers; and churchwardens may take off a person's hat if, on being asked, he refuses to remove it; and, it has been said, may whip boys who play in church during or immediately before service. But such action might be attended with awkward consequences in these days (*Burton* v. *Henson* [1842], 10 M. & W. 108; *Worth* v. *Terrington* [1845], 13 M. & W. 781; the Church of England canons of 1604, Nos. 19, 85, and 111 may also be consulted). It has, however, been decided that a churchwarden has no right forcibly to prevent an inhabitant from entering the church for the purpose of attending service, on the ground that in his opinion there is no room (*Taylor* v. *Timson* [1888], 20 Q.B.D. 671).

2. Ethical.—From the ethical point of view there may be considerable difference of opinion on the question, Is brawling, that is, the disturbance of other people's worship, under any circumstances justifiable? The answer will depend largely on the view taken of the ethical standard of right and wrong. Those who think that the law of the particular country is the only standard, and must be obeyed, can easily answer this question. The laws of many civilized countries now protect all public worship from disturbance and all ministers of religion from molestation, and the answer in those countries would be—No.

Those who find the will of the Deity expressed in the Bible, and regard this as the ultimate standard, have a more difficult task. It is undoubted that many instances of 'brawling' are commended in Holy Writ. For example, there is the case of Moses, who at a 'feast to the Lord' (Ex. 32[5]) took the golden calf which the Israelites had made, and burnt it in the fire, and ground it to powder and strewed it upon the water, and made the children of Israel to drink of it (v.[20]). Further OT examples are numerous—the destruction of the high places and the altars of the priests of Baal at various times; and of the brazen serpent by king Hezekiah. It is true these cases raise points as to the rights of heads of States. But from the abstract point of view they involve questions of sacrilege and brawling.

To come to the NT, we may mention (with all reverence) the action of Jesus Christ, who went into the temple of God and cast out all them that sold and bought there, overthrowing the tables of the money-changers and of them that sold doves. These people were in the house of God by lawful authority; the doves were no doubt required for sacrifice. Our Lord's reason was founded on the law: 'It is written,' He said, 'my house shall be called the house of prayer; but ye have made it a den of thieves.' Such a plea would not be admitted in a modern court of justice. It is a clear case of 'brawling' according to modern ideas.

The third point of view is that of people who think that the law of their particular Church or sect is the ultimate test. The Church of Rome has undoubtedly taught, and its adherents have acted on the opinion, that it is proper not only to disturb devotions which are contrary to its tenets, but also to molest and even to put to death ministers of religion and others who teach doctrines inconsistent with theirs. Members of religious bodies of this type would undoubtedly hold that 'brawling' at the command of their religious superiors is not only justifiable, but virtuous. Their sense of duty is of that kind which would burn the body to save the soul.

Lastly, there is the point of view of those who think that the ethical standard is a certain fitness, suitability, or propriety in actions as determined by our understanding or reason (Bain, *Mental and Moral Science*, p. 430) or, in Kant's words, that people should act in such a way that their conduct might be a law to all beings. It is conceived that all those who hold this view would approve of the laws of England practically as they now stand; that is, that, although a person may be constrained by an overpowering sense of duty to put down false religion, illegality, and wrong, he must not take the law into his own hands, and act so as to disturb, annoy, or injure his fellow-men. *Sic utere tuo ut alienum non laedas.*

LITERATURE.—Most of the law-books deal with brawling, but not completely: amongst others, B. Whitehead, *Church Law*[2], London 1899, and Lord Halsbury, Laws of England, 1909. Stephens' *Laws relating to the Clergy*, London, 1848 (s.v. 'Brawling and Smiting'), is the fullest, but its date precludes the new statutes and cases. Archbold, *Criminal Law*, 1905, gives statutes and cases to that date. The encyclopædias also have short articles, the best being Larousse, *Grand Dict. Univ.* Paris, 1875, s.v. 'Sacrilège.' The ethical view is almost always ignored.

BENJAMIN WHITEHEAD.

BRAZIL.—The area enclosed by the confines of the present Republic of Brazil contains four principal ethnological stocks—the Arawak, the Carib, the Tupi-Guarani, and the Tapuya. But many of the sub-sections of these races overlap into territory outside the boundaries of Brazil proper, so that the information in this article must be taken as referring to the religious con-

ceptions of those four families as a whole, and not to those of them who are strictly confined to the territories of the Republic.

The status of religious conception among the native tribes of Brazil is not very far advanced in the scale of belief. It consists mainly of a crude anthropomorphism. Indeed, it may be said that the distinction between the natural and supernatural has not yet been realized by them. Many of the agencies by which they believe the universe to be ordered are of a human or *quasi*-human character. They appear to be, for the most part, incapable of the abstract thought required to conceive of an eternal spirit, and their ideas of a Supreme Being are of the faintest. The general theogony of the Tupi, for example, though extremely hazy, appears to consist in the primal idea of a universal maternal agent. Fetish and animistic beliefs are also widely prevalent; and, as in nearly every religion of the lower cultus, the explicit (or comparatively explicit) belief is accompanied by an extraneous and confused body of semi-legendary superstition, such as a belief in demons and evil spirits of the forest, river, and mountain. These last vary in their characteristics according to locality, and in the course of generations several may have attained the distinction of godhead, if the name may be applied to entities few of whose attributes appear to be truly supernatural. It may be said that the religious conceptions of all four families mentioned above are on a similar level, and that certain beliefs are common to all.

1. **The Arawaks.** — The Arawak tribes are widely distributed over an area extending from the River Paraguay to the extreme north of the South American continent, and they have contributed largely to the formation of the existing stocks inhabiting the Antilles and Bahamas groups. It is generally admitted that they originated in the northern part of the continent; but their nomadic traits, and the ready manner in which they have intermingled with other stocks, have caused marked differentiation between the various tribes belonging to the family. At the present day most of them have ceased to be nomads, and are engaged mainly in hunting and fishing; certain of them, however, exist on an agricultural basis. Their principal divisions are: *Northern group*—Maypures, Atorais, Wapisianas, and other insignificant confederacies; *Southern and Western Groups*—Piris of the Uccayali River, Minanhas of the Jurua River, Canamaris of the Purus River, Manaos of the Rio Negro, Custenaús, Vaurás, Mehinakus, Yualapiti (all of the River Xingu territory), and Guanas, dwelling on the left bank of the Upper Paraguay.

(1) *Cosmogony.*—The Creation and Flood myths of the various Arawak tribes bear a close resemblance to those generally current throughout the South American continent; that is, they assume a twofold destruction of the world prior to its present condition. Thus the Arawaks of Guiana believe that Aimon Kondi scourged the world with fire, from which the survivors sought refuge in subterranean dwellings. Then a great flood followed, from which Marerewana and his followers saved themselves in a canoe. Such a Flood-myth is practically identical with that of the Quichés of Guatemala, as found in the *Popol Vuh*, the sacred book of that people, and in the mythologies of many other American races. That man originated in a subterranean world is a belief widely disseminated among the Arawaks. There death was unknown, but the ruler of mankind chanced to discover the upper world, and, returning, warned his people that, though sunlight was there, so was death. Many, despite the warning, sought the upper air; but multitudes are still believed to exist in bliss far below. Another Arawak version of the Creation asserts that the Great Spirit, having completed the heavens and earth, seated Himself on a huge silk-cotton tree by a river side, and cut off pieces of its bark, which He cast all around. Those which touched the water became fish, those which touched the air, birds; and those which alighted upon the earth became animals and men. The Arawaks of Guiana are almost wholly in a condition of totemism.

(2) *Theogony and ritual.*—The theogony of many of the Brazilian tribes clusters round the cult of the god Jurupari, which is best exemplified by that phase of it practised by the Uapes. This cult is invested with the utmost secrecy, but has been fully examined by Coudreau and Stradelli. The name Jurupari (*Juru-para-i*) signifies 'Issue from the mouth of a river,' and the myth of his birth states that he was born of a virgin who possessed no sexual parts. She, however, conceived through swallowing a draught of *cachiri*, or fermented liquor, but could not be relieved of her offspring until, when bathing, she was bitten severely by a fish called 'Tarire,' when Jurupari was born. He grew speedily to manhood, and one day invited the men of the tribe to partake of a great bowl of *cachiri*; but the women refused their assistance in its manufacture, and thus gained his ill-will. Their children likewise incurred his enmity through eating the fruit of the *uacu* tree, which was sacred to him; and for this offence he devoured them. Enraged at the loss of their children, the men of the tribe surrounded him, and cast him into a fire, from the cinders of which sprang the *paxiuba* palm, which the Uapes believe to be his bones. Whilst it was still night, the men cut down this tree, and fashioned it into sacred instruments, which it is ordained the women of the tribe must never see. Should a woman of the Uapes set eyes upon any of the sacred symbols of Jurupari, she is at once poisoned.

This exclusion of women from the secret rites of the worship of Jurupari seems to point to some remote totemic origin of which all but the mere remembrance has been lost. There would appear to have been an ancient apprehension among the Uapes that Jurupari, who was regarded by them as more of a demiurge than a god proper, might exercise upon the women of the tribe 'le droit d'un dieu.' Indeed, a myth exists which relates how one woman who had in her possession the sacred symbols was violated by Jurupari, and that the exclusion of the women from his worship dates from that event.

On the days upon which the worship of Jurupari is to be celebrated, the men proceed from the place of his adoration on a tour of the surrounding district, playing loudly upon pipes and flutes. Upon hearing the 'Jurupari music' the women shut themselves up in their houses, and do not emerge again until they are certain that all risk of their beholding the procession is over. The men then return to the headquarters of the priests, where the sacred symbols are exposed to view. These are the *macacaraua* and the *paxiuba.* The former is a black cloak without arms, descending to the middle of the body, and made of monkeys' hair interwoven with hair cut from the heads of virgins immediately after their arrival at puberty. The *paxiuba* is a portion of the palm-tree of that species, about the height of a man, and some ten centimetres in diameter. By a device consisting of holes bored in the part of the tree beneath the foliage, its leaves are made to tremble by the breath of the priest who evokes it.

The principal religious ceremony in the worship of Jurupari is the *Dabucuri*, or initiation of the young men. This occurs six times in the year, as follows: the *assaby* on Jan. 1; the *ucuqui* on Feb. 2; the *miritz* on March 3; the *pataud* on May 4; the *umari* on July 5; and the *uiga* on Nov. 6. Of all these indigenous fruits the Indians make intoxicating beverages. These are freely

partaken of in the accompanying revels, which are of the most riotous description. On the day of the festival those who have arrived at manhood are painted in black and red. They chant mournful melodies, whilst the *pagés*, or priests, join them in marriage to women of the tribe, who are then sent into the forest. Three men in barbaric costumes then carry in the *paxiuba*, and several Indians disguised as Jurupari dress in the *macacaraua* and symbolize the god's myth. The *paxiuba* horn is then sounded, and the women return. Mutual flagellations commence, and the proceedings degenerate into a saturnalia. Jurupari is invited, but replies through the mouth of the *pagés* that he dare not be present, as, if he were to have relations with a woman, he would 'be changed into a serpent.'

The demiurgic nature of Jurupari is indicated by his relative position to Tupan, a primitive deity common to many Brazilian tribes. The Tupan of the Indians of the period immediately subsequent to the discovery of Brazil was by no means a beneficent deity, but typified the thunder, or any agency terrible or majestic. The first missionaries in the southern part of Brazil identified Tupan with God the Father, and the Christian reminiscences which we discover in the Jurupari cult doubtless had their origin in the old missionary idea of Tupan. The *pagés* differ regarding the identity of Tupan. Some regard him as a species of All-father, whilst others construct a vague hierarchy from Jurupari the Terrible, the Tupan of the Indians ('the Good'), and the Tupan of the Whites ('the Mighty'). Jurupari is not at strife with Tupan, but rather supplementary to him; for whereas the former has a local and precise significance, that of Tupan is vague and general. Tupan, it is said, created Jurupari 'for evil.' When he visits the earth, Jurupari is always his guide. Jurupari dwells with Tupan in heaven; and if in life the men of the Uapes have honoured the cult of Jurupari, they go to dwell with him after death. If they have not done so, they perish on the long road from earth to heaven. The women who behold the sacred symbols go to Bichiu, a place inhabited by inferior spirits—a species of purgatory; but if they have not thus offended, they go to the heaven of Jurupari. Tribes akin to the Uapes believe that those women who see the symbols are changed at death into serpents or crocodiles. In the heaven of Jurupari the dead hunt, fish, drink *cachiri*, and make sacred symbols. Grief and ennui are unknown. Those men who are lost on the route finally arrive at a hell, a badly-defined, shadowy extension of earth, where they continue the terrestrial life.

The Arawaks have a wholesome dread of evil spirits and forest-giants, which they designate *canchemar*. They have also a Jurupari of the Forest, an evil and malignant being, who, however, appears to bear no relation to the demiurge of the same name.

(3) *Priesthood.*—Among the Uapes the sacerdotal caste of the *pagés*, or priests, is strongly organized in a hierarchy, and is subdivided into the *uarassu*, or adepts, the *assu*, or arch-priests, and the *mirim*, or neophytes, who are very numerous. The secret of their organization is little known and well guarded. It is, in fact, a species of freemasonry, and candidates are initiated into the several degrees by similar processes. The *pagés* are also doctors, but, above all, exorcists. They possess magical formulæ, which vary with each tribe. Certain *pagés* act as mediums to demons whom they profess to have in their service, and others undertake invocation of the dead. The thoroughness with which they carry out their purely religious duties is remarkable. Even the children are examined and interrogated by them in secret regarding the cult of Jurupari. In fact, the initiation of the layman into that cult lasts during the entire period of his life. Although the *pagés* resort to symbolism, they are not fetish-worshippers, and distinguish strongly between the symbol and the being it symbolizes. The *macacaraua* is not Jurupari, they say. It is his 'figure' (*rangaua*). The Guaycurús of Paraguay possess a similar religious order, whom they call *Vünägenetó*, and who act principally as exorcists of the evil in man, which they designate *nanigo gigó*. They believe that the goat-sucker bird and the screaming vulture act as messengers from the dead to the priest, between whom and the deceased persons of the tribe there is frequent communication. They also practise exorcism by fumigation. The dualism which the *pagés* of the Puris profess was in all probability communicated to them by European missionaries (Spix and Martius).

2. The Caribs.—The Caribs, one of the first American races to come under the notice of the European discoverers, were until recently supposed to be confined to Venezuela, Guiana, and the Antilles; but von den Steinen met with tribes cognate to them in speech and physiological characteristics in the very heart of Brazil—the Bakairi and Nahuquas of the Upper Xingu, which he regarded as the Carib cradle-land. They were, *par excellence*, the maritime race of America, and in their great sea-canoes extended their piratical voyages to Cuba and Haiti, and permanently occupied some of the Lesser Antilles. On the mainland they were in possession of the shore west of the mouth of the Orinoco, nearly to the Cordilleras. From their name is derived that of 'cannibal,' owing to their custom of eating human flesh. Most of the present-day Caribs are nominally Christians.

(1) *Mythology.* — The Caribs of the Antilles regarded the earth, which they called Mama Nono, as 'the good mother from which all things come.' Their mythological ideas corresponded with their degree of civilization, which was extremely primitive. The first ancestor of the Caribs created his offspring by sowing the soil with stones, or with the fruit of the Mauritius palm, which sprouted forth into men and women. They believed that a multiplicity of souls inhabited one body, and that, wherever they might detect a pulsation, a soul was present. All these, however, were subordinate to one principal spirit enthroned in the heart, which alone would be transported to the skies at death (anon. *Voyage à la Louisiane fait en 1720*). The seat of the deceased was named by them *Hueyu Ku*, the Mansion of the Sun, where, as in the Mexican paradise, the barbaric idea of bliss was to be attained. With the Caribs of the mainland, some shadowy belief in resurrection seems to have obtained, as they were most punctilious in preserving the bones of their ancestors, which, after having cleaned, bleached, and painted them, they kept in a wicker basket full of spices suspended from the doors of their dwellings.

They possessed a culture-hero, Tamu (Grandfather), who was also known as 'Old Man of the Sky.' He appears to have been almost identical with the Nahuatlac Quetzalcoatl, the Quiché Gucumatz, and the Mayan Cuculcan, in that he was of light complexion, came from the east, and, after having instructed the Caribs in agriculture and the primitive arts, disappeared in the direction whence he came. Brinton believed him to be identical with the Zumé of the Guarani of Paraguay, and Ehrenreich with the Kamu of the Arawaks (a culture-hero), and the Kaboi of the Karayas. In the legend of the latter he dwelt

with their ancestors in the under world until a bird, the *Dicholophos cristatus*, by its call, led them to life and light in the upper world. With the Caribs the sun and moon shared sovereignty with the earth as the supreme beings of the Universe. It is almost certain that the god Hurakan (from whose name is derived our word 'hurricane'), who figures in the Quiché *Popol Vuh* as 'the Heart of Heaven,' the supreme god, was of Carib origin, although it is possible that he may have been borrowed by the Caribs from the indigenous tribes of the Antilles; but von den Steinen gives the Carib form as *ye'lo*, 'thunder,' whence Island-Carib *toüallou*.

(2) *Priesthood*.—Although the Carib religion was of an extremely primitive type, it was well organized by a hereditary class of shamans called *piayes*, similar to the *pagés* of the Arawaks, to whom the Caribs were probably ethnologically related. This class exercised unlimited power, and, besides performing the very elaborate religious rites appertaining to their worship, were, as with the Arawaks, exorcists.

3. The Tupi-Guarani.—This stock, so called to show the ethnic affinity existing between the Tupi of Brazil and the Guarani of Paraguay, originally advanced in a northerly direction from the River Plate region, and drove the Tapuyas from the coast lands, which it thenceforth occupied as a maritime people. It is now represented by tribes occupying various belts of country in a territory so vast as that between the rivers Maroni in French Guiana, to the north, and the Plate, to the south. In Guiana the principal divisions are the Oyampi and the Emerillons, in Brazil proper the various tribes of the Central Plateau, and in Paraguay the Guarani. These various tribes were at one time addicted to cannibalism, but large numbers have become converted to Christianity, although many still retain their ancient beliefs. They speak a dialect of the ancient Tupi language, called the Lingoa Geral, which was standardized by the early Portuguese missionaries for their own uses, and gradually became the general tongue of the Amazonian tribes. Tupi branches are also found in Argentina and Uruguay.

(1) *Cosmogony*.—A certain magician, Irin Magé, is credited by the Eastern Tupi with the creation of seas and rivers, and at his intervention Monan, the Maker or Begetter, withdrew the *tata*, or Divine fire, with which he had resolved to destroy the world. An early account (Hans Staden, 1550) states their belief in a destruction of their ancestors by a powerful supernatural enemy called Mair, who sent upon them an inundation, from which only a few were saved, by climbing trees and hiding in caves—a variant of the *Popol Vuh* legend. The same authority gives the names of three brothers—Krimen, Hermittan, and Coem—from whom they claimed descent; and the Guarani speak of four brothers, and give two of their names as Tupi and Guarani, parents of the tribes called after them respectively. These four brothers are identical with similar quartettes in other American mythologies, and typify the cardinal points of the compass.

(2) *Theogony*.—The theogony of the Tupi is a simple nature-worship, although much confusion exists among authorities as to its constituents. The Vicomte d'Itabayana sees in Tupi belief the quality of dualism (a rare occurrence in American religions), and gives it as his opinion that Toru-shom-pek, the sun, stands for their principle of good, and Toru-guenket, the moon, for their evil principle. The latter is supposed to fall periodically and wreck the earth; and all baneful influences, such as thunders and floods, proceed from her. Magalhães (*O Selvagem*) is of opinion that Tupi theogony rests on the primal idea that all created things have a mother or maker, who is responsible for the general scheme of animate and inanimate matter. There are, further, three superior deities, to whom are apportioned the making of the various natural families. These are Guaracy, the sun, creator of all animals; Jacy, the moon, creator of plants; and Perudá or Rudá, the god of love, who promotes the reproduction of human beings. Each of these is assisted by inferior beings. Subordinate to the sun are Guirapuru, who has charge of the birds; Anhanga, who protects the field game; Caá-póra, who protects the forest game; Uayará, who guards the fishes. Under Jacy are Saci Cererê (in South Brazil) Mhoitatá, the fire-snake, who protects the country from fire; Urutaú, the phantom-bird; and Curupira, the guardian of the forests. Subject to Rudá are Cairé, the full moon, and Catití, the new moon. Each of these, in turn, has as many inferior assistants as the Indians admit classes; and these are served by as many beings as the Indians admit species, and so on, until every lake and river and kind of animal or plant has its protective genius or 'mother.' Brinton describes this polytheism as 'simple animistic nature-worship.' Though this may be said to apply to the Tupi race in general, its standards undoubtedly vary with locality; and this fact accounts for the seemingly widely differing accounts of Tupi theogony furnished by its several investigators.

With the Guarani, the southern branch of the Tupi, belief and worship appear largely to cluster round the figure of the god Zumé, a culture-hero, probably identical with the Carib Tamu. He, like other American culture-heroes, 'came from the East'; but the Guarani, according to the myth, grew so tired of his sententious advice and constant patronage, that they tried to drive him away with arrows. These, however, he caught, and hurled back upon his tormentors, and, dividing the waters of a neighbouring river by his Divine power, he walked to the other bank dryshod, and disappeared from view. He indicated to the Guarani his intention of returning in order to gather them into towns, and rule them in peace. Zumé is, of course, like the Mexican Quetzalcoatl, the Man of the Sun, the civilizing agent. He has been identified with Cemi, an Antillean deity, and his worship is found under various guises throughout South America.

A less mild personage is Tupa or Tupan,* the god-in-chief of the Tupi proper of Brazil. The earliest notice of this god is that of the missionary Père d'Evreux, who directly compares him with God the Father. He alone of the four brothers survived the Flood, and became the highest divinity of the Tupi, ruler of the lightning and the storm, whose voice is the thunder. He is, indeed, the Tupan of the Uapes, who, although of Arawak stock, have been deeply influenced by Tupi and Carib beliefs. Anhanga, the protector of field game, is sometimes opposed to him as an evil principle; but it is vain to affect to discern dualism where the notion of divinity is so slight, and that of anthropomorphism so strong. In any case, it cannot be an ethical dualism, but merely the opportunist invention of the priestly caste (see remarks on American dualism in Brinton's *Myths of the New World* and Spence's *Popol Vuh*). There is not wanting evidence, however, that Tupa was also a 'culture-hero,' who latterly attained godhead. He is credited with teaching the Tupi the use of fire, the *pisang*, and the cane, as well as with instructing them in agriculture.

(3) *Inferior spirits*.—Many of the Amazonian

* The name is derived by Tatevin (*Anthropos* ii. 269 f.) from *tuba upayn*, 'Father of All.'

tribes of the Tupi have an elaborate system of myths clustering round the tortoise—a favourite figure in South American folklore. In these many inferior spirits are the principal actors, the most important of them being Kurupira, the wood-demon, and Oiara, the water-sprite. Paituna, 'the wonder-monkey,' is no simian, but the son of a woman belonging to a tribe of females with only one husband. He possesses miraculous powers, which he uses to discomfit his enemies in an amusing manner.

4. **The Tapuyas.**—The Tapuyas or Ges tribe are the oldest of the Brazilian races. They are best known perhaps by their name of Botocudos, from a lip-peg (*botoque*) which they wear. They are found on the eastern slopes of the Cordilleras, from the peninsula of Goajira in the north to the borders of Chili, and in large numbers in Eastern Bolivia. Their principal divisions are the Karayas, the Kayapos, and the Suyas of the rivers Xingu and Araguaya. They have not as yet realized the distinction between the natural and the supernatural. The universe is kept together or disturbed, as the case may be, by human or *quasi*-human agencies. The Karaya Flood-myth relates that the hostile demon Anatiwa originated the Deluge, and sent fish to pull down those who had taken flight to the hill Topirapé. The Ges attributed the re-building of the earth to the water-hen Saracura, which fetched earth to the hills, where those saved from the Flood congregated, so that the area of safety might be enlarged. The Karaya ancestral god, Kaboi, led his people from the under to the upper world by the cry of a bird. All these myths, though in circulation among the various tribes of the Tapuya family, have their counterparts in many other American mythologies. It cannot be discovered, however, whether or no the Tapuya tribes worship those 'deities' to whom they give the credit of creating the cosmos. Indeed, there is good reason to believe that they do not. 'They have,' says Brinton, 'no definite religious rites, but are careful to bury the dead, and have a belief that the spirit of the departed survives and wanders about at night (*Amer. Race*, p. 144). They are firm believers in metempsychosis, and the appeasement by mimicry of those vague powers who cause natural phenomena. Thus they shake a burning brand and shoot arrows at the sky to appease the powers of the storm. Semi-religious dances are common among them. They are, in fact, on the borderland between totemic practice and the anthropomorphism which generally succeeds it, as is proved by the circumstance that a sub-stock, the Tucanos, take their name from the toucan bird which they adopted as the totem of their tribe.

LITERATURE.—1. *THE ARAWAKS*: E. im Thurn, *Among the Indians of Guiana* (1883); Coudreau, *Études sur les Guyane et l'Amazonie* (1886); Stradelli, 'La leggenda dell' Iurupari' (*Bol. de la soc. geogr. Ital.*), 1890, pp. 659 ff., 798 ff.; Brett, *Legends and Myths of the Aboriginal Indians of British Guiana* (1868).—2. *THE CARIBS*: Karl von den Steinen, *Die Bakairi Sprache* (1892), *Unter den Naturvölkern Zentral-Brasiliens* (1894); Müller, *Amer. Urreligionen* (1855); de la Borde, *Religion des Caraïbes* (Paris, 1674).—3. *THE TUPI-GUARANI*: Barboza Rodriguez, *Exploração do Rio Jamundá* (1875); 'Poranduba amazonense' (*Ann. d. LEWIS SPENCE.

BREAD.—See FOOD.

BREATH.—Breath consists of air alternately drawn in and expelled from the lungs, and constitutes a vital element in man's spiritual as well as in his physical being. As a manifestation of existence, breath is frequently used, among many peoples, as synonymous with 'life,' 'spirit,' and 'soul.' The force of these several meanings becomes clear, for example, from such passages in the Bible as Gn 2^7, 1 Co 15^{45}, and from the various designations for 'breath,' 'spirit,' 'soul' in Hebrew (*ruaḥ*, *nephesh*, *nĕshāmāh*), Greek (πνεῦμα, ψυχή), Latin (*animus*, *anima*, *spiritus*), and Old Church Slavic (*duchŭ*, 'breath,' 'spirit,' *duša*, 'soul'; cf. Lithuanian *dausos*, 'air'). This is equally true of the kindred designations in other languages, even in savage tongues (see Tylor,[3] i. 433). The natural association, moreover, of the breath and breathing with the spiritual phenomenon of inspiration is seen in such a passage as Jn 20^{22}, where Jesus breathed upon the disciples when imparting to them the gift of the Holy Spirit. Cf. also Job 4^9 33^4, Is 11^4, Ezk $37^{9f.}$, and artt. SOUL, SPIRIT.

In classic times, among the Greeks and Romans, there were current a number of well-recognized ideas (all of them perfectly natural) which show the wide-spread and normal association of breath and air as the vital principle. Philosophers started with the postulate that the soul was drawn into the body with the first breath at birth, and they sometimes made the kindred element, wind, a vital factor in generation (*e.g.* Chrysippus, cited by Plutarch, *de Stoic. Repugn.* xli. 391; also Dio Chrysos. *Borysth. Orat.* xii. 387; cf. also the αὖραι ζωογόνοι of *Anth. Pal.* x. lxxv. 4, the πνοαὶ ψυχοτρόφοι of *Hymn. Orph.* xxxviii. 22, and, in general, Lobeck, *Aglaophamus*, i. 753–764). In connexion with death, moreover, the Romans regarded it as a religious duty that the nearest relative should catch the last breath of the dying, at the moment when the vital spark was leaving the body, in order to ensure the continued existence of the spirit (see Vergil, *Aen.* iv. 684; Cic. *Verr.* ii. 5. 45; Ovid, *Metam.* xii. 424). A somewhat similar custom formerly existed among the Seminole Indians of Florida; and the fancy of the Tyrolese peasants saw the soul out-breathed like a little white cloud at death (cf. Tylor, *l.c.*). This receives still stronger exemplification among the Athapascan Tahkali, who bring breath into direct connexion with transmigration. When one is either dead or dying, the medicine-man lays his hands on the breast of the individual in question, and then places them on the head of a kinsman of the dead or moribund. The medicine-man now breathes through the hands thus imposed, and the next child born to the kinsman of the dead man is held to have received the soul of the deceased, whose rank and name he assumes (Waitz, *Anthropologie*, iii. 195). Among some of the Tupi-Guarani tribes of South America, medicine-men frequently endeavour to effect cures by breathing on the diseased or injured part, and at certain ceremonies they blow tobacco smoke on the warriors, saying, 'Receive the spirit of bravery, wherewith ye conquer your foes' (*ib.* p. 419).

None of the nations of the world, however, paid so marked attention both to the physical side of breathing and to the psychical phenomena connected with it as did the early Hindus. By them breathing was regarded as one of the sciences, and the regulation of respiration in connexion with ascetic and ritual practices was of paramount importance; nor has the art disappeared in India to-day. In early times, as shown by the philosophic treatises of the Upaniṣads, careful observers, who were imbued with the idea of the importance of controlling the vital breath, had faithfully counted the normal number of respirations *per diem*, and found the average to be 22,636 inhalations and exhalations (*Amṛtabindu Upaniṣad*, 33), or 21,606 (*Haṁsa Upaniṣad*, 4), a round 21,600

(*Sarvadarśanasaṅgraha*, p. 175, 4), or again 21,000 (Rāmatīrtha in his notes on *Maitrāyaṇa Upaniṣad*, vi. 1); see Deussen, *Sechzig Upaniṣads*, pp. 656 n. 4, 675 n. 2; Ewing, 'Hindu Conception of the Functions of Breath,' in *JAOS*, xxii. 264. This calculation (about 15.9 respirations per minute) answers well to the modern computations made by Western scientists, who estimate the normal breath of the healthy adult to be between 16 and 20 respirations a minute. The meditative calm and the unsurpassed self-control of the Hindu ascetic, it must be remembered, would tend to reduce the frequency of respiration, and thus justify the lower figure as claimed.

Hindu devotees and philosophers not only made these statistical observations of respiration in connexion with their religious practices and their recluse life of self-abnegation, but they also distinguished various phases of the breath-element, and assigned a particular function to each. The spiritual and religious aspect of breath is to be recognized as early as the Vedas and Brāhmaṇas, but it reaches its full development in the Upaniṣads, where it assumes a paramount place.

In Sanskrit the cardinal words relating to breath and breathing are all derivatives of the root *an*, 'breathe,' 'respire' (cognate with Gr. ἄνεμος, Lat. *animus*, Goth. *us-anan*). The principal word for 'breath' in general is the derivative *prāṇa* (from *an* with prefix *pra*). This word heads the fivefold list (sometimes known as the *prāṇa*-series), consisting of *prāṇa, apāna, vyāna, udāna*, and *samāna*, under which the early Hindu physiological and psychological views grouped breath in its various functions.

Much attention has been devoted to studying this fivefold series of *prāṇa, apāna, vyāna, udāna, samāna*. The most thorough of the Western investigations of the subject are those by Deussen and especially Ewing, in the works alluded to already, and quoted with full titles at the end of this article. So painstaking and exhaustive an examination as that made by Ewing (*op. cit.* 250–275, 305) proves that the first member of the series, *prāṇa*, breath in general, designates either the double process of respiration or, more particularly, 'in-breathing,' 'inhalation,' as contrasted with 'out-breathing,' which is designated more especially by *apāna*, 'exhalation,' 'expiration.' These two words, *prāṇa* and *apāna*, occur very often together (frequently united in a *dvandva*-compound), and are used to denote the composite act of respiration. This very frequency of occurrence has caused their common long *a* (which is etymologically correct in composition of the vocalic prefixes *pra, apa*, with *an*) to be assumed analogically by the other three members of the group (in which the long *a* is not authorized by composition of the consonantal prefixes *vy, ud, sam*, with *an*). As to the meanings assigned, it should be noted, however, that Deussen maintains that *prāṇa* sometimes signifies 'expiration' (*Aushauch*), and *apāna*, 'inspiration' (*Einhauch*); see his *Allgem. Gesch. d. Philos.* I. i. 294–305, I. ii. 248–252, I. iii. 69–72, 441, 492, 605, 627, 649, and his *Das System des Vedânta*, 359–364. Ewing (*op. cit.* 292) strongly combats the point. His own investigations, moreover (*op. cit.* 275–276), tend to show that *apāna* denotes not only 'out-breathing,' but also the physiological breath-functions of that part of the body below the navel.

The term *vyāna*, lit. 'breathing apart,' appears to denote a permeating or abiding breath-factor which forms a sort of connecting link between *prāṇa* and *apāna*, though separate from them, and occupies also the interval between respirations (see Ewing, *op. cit.* 277–303). Deussen's rendering of the word is 'interspiration' (*Zwischenhauch*). The other two terms, *udāna* and *samāna*, are less frequent in occurrence and more obscure in significance. They seem to have to do with the function of breath in connexion with digestion. Deussen's renderings are 'up-breathing' (*Aufhauch*) and 'all-breathing' (*Allhauch*); see his *Philos. of the Upanishads*, 279–280. Ewing's various allusions to these last two breath-elements of the *prāṇa*-series (*op. cit.* 260–287) should be compared.

In modern times the Hindu *yogi*-ascetics and certain of the advanced native thinkers of India still look upon breathing as a science to be cultivated under competent teachers. The practice of appropriately regulated breathing, they maintain, affects not only the vital activity, but also the mental activity, and produces corresponding psychic results. The complete control of the vital breaths, even to suspending the breath for a considerable length of time, brings with it a mastery over all the forces that govern both mind and body. For some of the claims still made by living exponents of these views, reference may be made to the writings of Rāma Prasād and the Swāmi Abhedānanda, cited below.

LITERATURE.—The full titles of the chief works alluded to in this art. are: Ewing, 'The Hindu Conception of the Functions of Breath—a Study in Early Hindu Psycho-physics,' in *JAOS*, xxii. 249–308, New Haven, 1901; Deussen, *Allgem. Gesch. der Philos.* i. (3 parts), Leipzig, 1894–1908, his *Sechzig Upanishads des Veda*, Leipzig, 1897, also *Das System des Vedânta*, 359–364, Leipzig, 1883, and *The Philosophy of the Upanishads* [Eng. tr. by Geden, pp. 274–280, Edinburgh, 1906]; Tylor, *Primitive Culture*[3], i. 431–433, London, 1871 [[4]1903]; Lobeck, *Aglaophamus*, Königsberg, 1829; Waitz, *Anthropologie der Naturvölker*, iii., Leipzig, 1862; Rāma Prasād, *Nature's Finer Forces* (Science of Breath), Bombay, 1890; Abhedānanda, *How to be a Yogi* (Science of Breathing), pp. 125–160, New York, 1902.

A. V. WILLIAMS JACKSON.

BRETHREN OF THE COMMON LIFE.—

1. **Founders.**—The Brethren of the Common Life represent one of the most successful of the many efforts made during the Middle Ages for the revival of piety. Some of their external arrangements were similar to those of the Beghards and Beguines, but their organization was more closely connected with the system and discipline of the Church, as was intended by their founders, Gerard Groot and his chief disciple, Florentius. Gerard (1340–1384) was the son of Werner Groot, a wealthy citizen and magistrate of Deventer. He took his degree at the University of Paris, acquiring a considerable reputation for talent and attainments, and then settled at Cologne, which had long been a celebrated seat of learning, and subsequently became a university town. Here he combined the pursuit of study with worldly amusements, and became very popular among his associates. Converted by the efforts and prayers of a former friend, named Henry Kalkar, the prior of a Carthusian monastery, he completely changed his mode of life. Throwing off his elegant clothes, he assumed the simplest and humblest dress, while for his inward improvement he withdrew for three years into a Carthusian monastery, where he spent his time in meditation and self-discipline. He also visited the saintly Ruysbroeck, prior of the monastery of Grünthal, to whose spiritual influence he owed much of the progress of his soul. After five years he came forth as an evangelizing preacher of great force and persuasiveness, full of zeal for the revival of truly spiritual religion among the people at large, and anxious for the reform of the monks and clergy. He was ordained deacon, but never regarded himself as worthy of the priesthood. For three years and a half he went about preaching in Holland and the Netherlands, with the result that he drew many souls out of worldliness and sin and led them to holiness of life. His success, and his severe condemnation of the laxity of the clergy, however deserved, led to opposition to his preaching; and the Bishop of Utrecht was persuaded to

silence him, by withdrawing licences to preach from deacons. An appeal was made to the Pope, but it is uncertain whether this was successful, for Groot died soon after, in his 44th year. He was prematurely cut off by the plague, caught while visiting a sick friend. But he had had time, with the help of his foremost disciple, Florentius, to plan arrangements for confirming his converts in Christian ways. These two good men sought to establish Brotherhoods and Sisterhoods, in which those who had been rescued from worldliness might find refuge, and they decided on the foundation of some monasteries which might serve as a support and means of guidance to the inmates of the Houses, and might also offer a model of monastic reformation. The movement received the name of the 'moderna devotio.' Groot had some years before his death given over his own spacious house to the town authorities of Deventer as an abode for widows and maidens who should live together in piety and good works. The Brotherhoods were also begun at Deventer, while the first monastery was established at Windesheim. It was Augustinian, and became the centre of several new and many reformed monasteries. The next was founded on Mount St. Agnes, near Zwolle. A brother of Thomas à Kempis was the first prior of the latter, and Thomas himself, after his education at Deventer, spent his life in it as a monk.

2. **Regulations.** — In common with all pious persons in the mediæval Church, Groot regarded the career of the monastic regulars as the highest; but his societies were intended as a link between the monks and the people, and his Brotherhoods and Sisterhoods formed a kind of modified monasticism without any vows. Their members, living a common life in their respective houses, were to work for their maintenance, to give what they could save to the poor and sick, and to interest themselves in the religious teaching of the young. The members of a Brotherhood were drawn from various classes. The educated copied books, as was done in monasteries, and, later on, attended to printing them, while those who had been brought up to handicrafts practised these for the benefit of the House. The hours of prayer and of attendance at Mass were diligently observed. There were several priests in each house, besides the lay members. The head of the community was called 'rector,' and implicit obedience to him was required. Under him was the 'procurator,' who was general manager. Various offices, such as those of librarian, sacristan, warden of the infirmary, down to the humbler ones of tailor, baker, and cook, were distributed among the Brethren. Besides being called *Fratres vitæ communis*, the brothers acquired several other appellations, such as *Fratres bonæ voluntatis*, from their benevolence, and *Fratres cucullati* from their cap or head-dress, and they were often called Lollards by their enemies, though they had no real connexion with that sect. Owing to their educational labours, they also acquired the designation of *Fratres Hieronymi*, 'Brothers of St. Jerome,' who was regarded as a patron of learning. The dress of the Brothers was black or grey; for priests and clerics it went down to the feet, for lay brethren to the knee; and a black cap was worn on the head. The under garment was washed every month in summer, every two months in winter. On entrance into the society each man could deal with his property as he liked; but if he once gave it over to the House, he could not withdraw it in the event of his leaving. The Brothers rose at half-past three in the morning, and went to bed at nine in the evening. During the day an interval was allowed for repose. Dinner was at ten o'clock, supper at five. At meals the Scriptures or the *Lives* of the Saints were read, the Brothers taking a week each, from the seniors downwards. Meat might be eaten on Sundays, and other days except Fridays and fast days. Their drink was one little mug of beer of the small size out of which wine was usually drunk (Dumbar, *Analecta*, i. 14). Many members of the society injured themselves by excessive fasting, in a degree not required by the rules. Constant industry, according to the previous training of each man, was inculcated; and where there was a farm or garden, outdoor labour was required. All these activities of the Brothers contrasted favourably with the begging habits of the friars, who were mostly living in idleness, and became in consequence the bitter enemies of the Brothers; while the domestic work of the Sisterhoods and their instruction of girls made them appear to great advantage as compared with the degenerate nuns. It might well be supposed that these hard-working and devout societies would have been commended of all men, but the friars succeeded in raising much opposition against them, while among the people at large the reverence which was felt for the regular and long-established monastic orders, bound by lifelong vows, was not bestowed upon the more secular system of the new society, till eventually they were known by their fruits and became respected for their good deeds. It was doubtless better for them not to be thought much of, at any rate at first, as they were thereby guarded from the temptation to pride which beset the old religious orders. The opposition, however, was carried to the verge of persecution, for at the Council of Constance a Dominican named Grabow accused the Brethren of the Common Life, and maintained that it was a mortal sin to form a community without the vows of poverty, obedience, and chastity. They were, however, defended by their friends and supporters, the Windesheim monks, and also by Gerson. The Council condemned Grabow, and offered him the choice of retractation or the stake. Several Popes also had the good sense to support the Brotherhoods and Sisterhoods by their rescripts.

3. **Influence on education.**—The eventual estimation of the Brothers among the people at large was mainly promoted by their devoted efforts on behalf of the religious education of boys. At their first centre, Deventer, they boarded many of the scholars who attended the noted school already existing there, or obtained hospitality for them among devout widows or benevolent burghers. Their religious teaching was mainly given in their Houses, but some of their scholars rose to be assistant teachers, or 'lectors,' in the school, and thus their work and influence became blended with the secular parts of education. Similar arrangements were made in the many other towns to which the educational work of the Brotherhoods rapidly extended. There was no opposition in those days to the religious side of education. On the contrary, the authorities of towns in Holland and Germany frequently invited the help of the Brothers, and induced members of their Society to settle in their midst, providing houses for them. In some places they were entrusted with the reorganization of the schools. Distinguished and pious schoolmasters, such as Hegius at Deventer and John Cele at Zwolle, were in close touch with the Brothers, and there can be no doubt that not a few of the latter became teachers of classics as well as of religion. When the culture brought in by the Renaissance, with its revived study of Greek, extended to Germany, through the energy of Rudolph Agricola and others, it gradually won over members of the Brotherhoods, and added thereby to the effectiveness of their educational labours. In some of the schools there were more

than a thousand scholars, and the spectacle of devoted men giving their best energies to bringing up the rising generation in true religion and sound learning gave new hope to all who had the good of their country at heart. At the same time it must be admitted that it was the aim of the Brothers not only to produce good laymen and priests, but also to recruit the monasteries with more earnest novices; and Erasmus complains that they unduly pressed their youths to enter monastic life. This was certainly not the case with Florentius, but it may have been so later on; and we must remember that Erasmus was induced by the desire of his guardians to become a monk, because they had wasted his patrimony, so that he was somewhat prejudiced.

It has been sometimes stated that the Brothers founded schools of their own, but this is a mistake; for instance, Erasmus was not educated in schools belonging to them, as has been usually alleged. He attended the public schools, while boarding with the Brothers and receiving religious teaching from them. Their educational labours continued for about a hundred and fifty years, when most of the schools in which they had taught came under the influence of the Jesuits. The Lutheran Reformation occasioned the Roman Catholic movement that has been called the Counter-Reformation. This was led mainly by the Jesuits, and their pushing and aggressive methods eventually superseded the more modest and quiet work that the societies founded by Groot and Florentius had carried on.

In connexion with the name of Florentius Radewin (1350–1400), we have to notice the boyhood of Thomas à Kempis (1380–1471) before his entrance upon the life of a monk in the Augustinian monastery of Mount St. Agnes. Very early in life Thomas was sent to the school of Deventer, and was brought into connexion with the saintly Florentius, who had, for the sake of being near Gerard Groot, given up higher ecclesiastical emoluments to become one of the Vicars of the collegiate Church of St. Lebuin. He was, after Groot's death, the recognized leader of the societies that Groot and he were establishing, but he did not become at first the Rector of the House at Deventer. He had accepted that office by the time à Kempis applied for admission, and his winning and gracious manners and a natural dignity of bearing had given him a predominant influence for good. He befriended the youthful à Kempis and placed him with a devout widow, receiving him for a part of the time into his own house. It is not too much to say that we owe the spiritual meditations written by à Kempis to the effect on his after life of the saintly character of Florentius. Among many such writings the *Imitatio Christi* is usually included; and if, as we fully believe, the authorship of that well-known book of devotion is rightly ascribed to him, the debt we owe to the revered teacher of his early days can hardly be over-rated. Thomas himself has commemorated Groot and Florentius and some of the early Brethren in a remarkable work, which has long been bound up with his other writings in the edition of Sommalius. In this he gives most interesting details of his spiritual Father and Rector, as well as of other members of the House. A short sketch of a youth of his own age, named Arnold of Schoonhoven, who was his model of piety, closes these valuable memoirs. They are also interesting as affording one among many evidences of the *Imitatio* having been composed by à Kempis. Dr. Hirsche, in his *Kritisch-exegetische Einleitung*, brings forward a number of quotations to show the similarity of many expressions in these biographies to those in the *Imitatio*. And it may be added that the lives of the founders and brothers so recorded afford an impressive realization of the precepts of that manual of devotion, and exhibit a spirit of piety which belongs to the same lines of religious thought. It is scarcely too much to say that the *Imitatio* cannot be fully understood without a perusal of these records.

4. Doctrines.—The remarks just made bring us to the question as to the doctrinal limitations of the Brothers and their kindred monks. Groot was a firm adherent of all the dogmas of the Roman Church, and had even been called *malleus hæreticorum*, 'the hammer of heretics.' When the saintly Ruysbroeck expressed himself, as Groot thought, with too great freedom in the direction of mysticism, he opposed his sentiments. Yet if we take the word 'mysticism,' which may be used in many senses, as meaning the personal and inward realization of spiritual truth imparted by the Holy Ghost as contrasted with a mere outward and formal religion, we shall find it present in the teaching of Groot and Florentius and in that of à Kempis; and some of the Windesheim monks were even more definitely mystics. Yet none of the earlier Brothers would have allowed himself to question any belief that was a part of the Papal system. And those writers are wrong who have maintained that the Brethren of the Common Life were 'Reformers before the Reformation.' In one respect, indeed, they were reformers, but they never intended to be so in the sense that we associate with Protestantism. This point was their advocacy of encouraging the laity to read the Scriptures in the vulgar tongue; but they did so without any doubt occurring to them as to the Bible being fully consonant with Roman doctrine. They wished laymen to study Holy Scripture for their personal improvement, and frequently gave informal addresses to them in their houses on passages of the Bible, and especially on those that bore on practical duty. Among the Brothers at Deventer, Gerard Zerbolt, one of the librarians, was the strongest advocate of translations of Holy Writ and of prayers being supplied to the lay-folk in the vernacular; and his arguments are well worthy of study in the treatises that he put forth, and which still exist.

When, later on, the Lutheran Reformation began to make progress, the Brethren of the Common Life were found, as was natural, on the side of the Papacy; yet in time the new doctrines made their way into some of the Houses, and individual members were won over by them. After a while several of the Brother-houses went over entirely to the Reformed faith, and that at Wesel received the warm approbation of Luther himself.

The welcome given in many towns to the greater freedom of doctrine promised by the Reformers damaged the continuance of Brother-houses in which the Roman teaching was still maintained; but a few here and there survived for a long time; and while the educational work passed either to the Protestants or to the Jesuits, some Brother-houses lingered on till suppressed by Napoleon Bonaparte. The Sister-houses, begun in the first instance by Groot himself at Deventer, became widely extended, and accomplished good work in the training of girls, as well as in copying books, in miniature painting, and in the humbler offices of household duty. The Superior was usually called 'Martha,' and one of the most impressive of the treatises of Thomas à Kempis is an encomium on the duties and influence of a woman who thus cares in practical matters for the welfare of the devout. There was usually a priest attached to the Sister-houses who acted as ruler and confessor. Among the most remarkable of the latter was Brinckerinck, who ruled Groot's house for women at Deventer. Some of his addresses to the Sisters still exist, and are full of helpful words of encouragement for the spiritual life. A good many of the Sisters eventually joined Augustinian nunneries.

It has been stated that the monasteries of Windesheim and St. Agnes, and others afterwards established, were a part of Groot's scheme, and remained in close sympathy with the Brothers. A *Chronicle of Windesheim*, by Busch, a contemporary of à Kempis, contains many references to Groot and Florentius, and extracts from their letters, which show that the spiritual teaching in both these parts of Groot's system was identical, and that Florentius, when Rector of the House at Deventer, exercised the greatest care as to recommending Brothers to take the vows at Windesheim, or elsewhere, fully knowing the danger it had been to monasteries to receive persons who had no adequate vocation for lifelong devotion. The *Chronicle of Mount St. Agnes* was written during

his life by à Kempis, and a touching notice of his death is added at the close by another hand.

LITERATURE.—I. *ORIGINAL SOURCES.*—The most readily available of these are the lives of Gerard, Florentius, and others, by Thomas à Kempis, in the editions by Sommalius, in the 17th cent., of the works of à Kempis (earlier editions: *Opera et libri vitæ*, Nuremberg, 1494, and *à Kempis opera*, Antwerp, 1574; Eng. tr. *The Founders of the New Devotion*, by J. P. Arthur, Lond. 1905); also Thomas à Kempis, *Chronicon canonicorum regularium Montis S. Agnetis* (Eng. tr. *Chronicle of Mount St. Agnes*, by J. P. Arthur, Lond. 1905–1906); J. Buschius, *Chronicon Windeshemense*, Antwerp, 1621, re-edited by Karl Grube, with the *Liber de reformatione monasteriorum*, Halle, 1886 (an indispensable source for the study of Gerard Groot, and the Brothers and monks influenced by him); and a tr. of Gerald Zerbolt's *Beatus vir* and *Homo quidam*, by J. P. Arthur, London, 1908.

II. *MODERN LITERATURE.*—Delprat, *Verhandeling over de Broederschap van G. Groote en over ten invloed der Fraterhuizen*, Utrecht, 1830 (revised ed. Arnheim, 1856); Acquoy, *Het Klooster te Windesheim en zijn invloed*, 1875–1880; Hirsche, *Kritisch-exegetische Einleitung in die Werke des Thomas von Kempen*, Berlin, 1873; artt. on 'Gerard,' 'Florentius,' and others in *PRE* (3 editions); artt. on 'Brüder des gemeinsamen Lebens' in *PRE*^{1} (Ullmann), in *PRE*^{2} (Hirsche), and in *PRE*^{3} (Schulze). Of these, the article by Hirsche goes the deepest, Schulze treating chiefly of the outward development. See also K. Grube, *Groot und seine Stiftungen*, Cologne, 1883. One of the most valuable treatises on the characteristics and work of the Brotherhood is that by E. Möbius, Leipzig, 1887. Bonet-Maury, *Gérard de Groote*, Paris, 1878, contains a useful list of Gerardic writings, and extracts from them. Kettlewell, *Thomas à Kempis and the Brothers of the Common Life*^{3} (abridged), Lond. 1885, will be found useful, but does not contain the more recent criticism and information. An interesting sketch of the Brethren of the Common Life is contained in Neale's *History of the Jansenist Church of Holland*, Oxford, 1858. Sir Francis Cruise, *Thomas à Kempis: a Visit to the Scenes in which his Life was spent*, Lond. 1887, contains a very valuable list of the bibliography and literature of the whole subject. A further list of original sources is given in S. Harvey Gem, *Hidden Saints: the Brothers of the Common Life*, London, 1907.

S. HARVEY GEM.

BRETHREN OF THE FREE SPIRIT.—This name has been given to mystic-pantheists who emerged in the 13th cent., were associated with different sects such as the Beghards, and continued generation after generation down to the 16th century. Mosheim found, as he thought, their characteristic doctrines in writings of the 11th cent.; but it is safer to connect the origin of the Brethren with a speculative movement of the 13th century. At the beginning of that century there was a philosophical revival, which was quickened by Aristotelianism mixed with Neo-Platonism and introduced to the West in an Arabic dress. Under its influence David of Dinant indulged in speculations tending to pantheism; and at the same time Almaric of Bena, also affected by the Oriental Aristotelianism, set forth mystic doctrines which were accounted pantheistic and therefore dangerous to religion. At Paris in 1204, Almaric was charged with teaching 'quod quilibet Christianus teneatur credere, se esse membrum Christi, nec aliquem posse salvari, qui hoc non crederet.' On an appeal to Rome he was condemned; and it is evident, therefore, that his teaching must have had some meaning other than the mystical union of the believer with Christ, since it was judged to be heretical.

Thomas Aquinas, enumerating three errors regarding the being of God, distinguished between David of Dinant and Almaric:

> 'Alii autem dixerunt deum esse principium formale omnium rerum, et haec dicitur fuisse opinio Almaricanorum. Sed tertius error fuit David de Dinando, qui stultissime posuit deum esse materiam primam' (*Summa*, I. iii. 8).

Though the men were both dead, a Council of Paris in 1209 condemned their works; and it was asserted that Almaric had inspired the dangerous doctrines of the Almaricians, as they were called. Among these doctrines this was set forth:

> 'Pater in Abraham incarnatus, Filius in Maria, Spiritus Sanctus in nobis quotidie incarnatur—omnia unum, quia quidquid est, est deus.'

Further, the Almaricians were accused of teaching that now, in the time of the Spirit, salvation in no way depends on the sacraments of the Church, and that what are accounted sins of the flesh are not sins if done through love. It was not likely that these men would escape the censure and punishment of the Church, and a persecution directed against heretics was begun in Paris in 1210, and in 1212 was raging in Strassburg. Among those who perished at Strassburg were *Ortliebenses*, a name derived from Ortlieb, whose teaching marked him as a follower of Almaric.

These men were hardly entitled to be considered speculative thinkers, but none the less there were elements of pantheism and mysticism in their principles. They maintained that the uncreated universe is eternal, and that, while there is no resurrection of the body, immortality is for all. The Trinity was represented in some mystic fashion by three members of their community. They were not charged with carnal practices, but they roused ecclesiastical opposition by repudiating the sacraments and ordinances of the Church as unnecessary for men united with God. In 1215, at the fourth Lateran Council, the theories of Almaric were once more condemned, and condemned with the full authority of the Church. The mystic-pantheistic doctrines set forth by the Almaricians were not crushed, however, by the persecution of 1210, by the Lateran decree, or by a persecution which took place in 1216, as they were wide-spread, and had reached even the Waldenses, in the middle of the century, when they were attacked by Albertus Magnus. The opposition of Albertus did not stay the progress of these doctrines, and they began to affect the Beguines and Beghards, who, though they had long enjoyed the blessing of the Church, were exciting suspicion by their fanatical laudation of poverty. In these communities, prophets or teachers appeared who taught that God could best be served in freedom of spirit, and they and their converts were known as 'Brethren of the Free Spirit.' The orthodox Beghards and Beguines suffered from the evil reputation of the heretics, and the Franciscan spirituals, often confused with the Beghards, suffered in the same way.

It is difficult to determine the circumstances under which the name of 'Brethren of the Free Spirit' was adopted or applied, and also to discover the author of the phrase. Lea in his *History of the Inquisition* (ii. 321) says:

> 'Even the orthodox Cæsarius of Heisterbach [died c. 1240] argues that much is permitted to the saints which is forbidden to sinners; where is the Spirit of God, there is liberty—have charity and do what thou pleasest. When the fatal word had once been spoken, it could not be hushed to silence.'

In an episcopal letter of 1317, quoted by Gieseler (*Lehrbuch*, III. vii. 90), the writer enumerated the errors of those

> 'quos vulgus Beghardos et Schwestrones nominant, ipsi vero et ipsae se de secta liberi spiritus et voluntariae paupertatis parvos fratres vel sorores vocant.'

The name, whatever its origin, was directly associated neither with pantheism nor mysticism, but with the liberty of which Cæsarius of Heisterbach wrote, and for which Pauline authority was claimed. Yet this liberty was asserted not as mere licence, but as the natural right of men with the Divine Spirit.

The logic of the doctrines of the Brethren is intelligible. God is what is, and men, being of Him, come from and return to Him. There is therefore neither purgatory nor hell, and the sacraments and ordinances of the Church are unneeded. As man is essentially Divine and is able through contemplation and withdrawal from things of sense to know himself united with God, he can in his freedom do what God does, and must act as God works in him. There is therefore for the free man neither virtue nor vice. God is all, and all is God, and all is His; and men are therefore free to take or beg their bread, so that they

may not be entangled through labour in the things of sense. Intelligible though the logic may be, the doctrines contradicted the dogmas, and led to a violation of the practices, of the Church, with the destruction of morality. The same Cæsarius of Heisterbach who had a plea for liberty condemned the men who indulged in it (*de Miraculis*, v. 22):

'Maximam etiam blasphemiam ausi sunt dicere in Spiritum Sanctum, a quo omnis munditia est et sanctitas. Si aliquis est in Spiritu Sancto, aiebant, et faciat fornicationem, aut aliqua alia pollutione polluatur, non est ei peccatum, quia ille spiritus qui est Deus, est in eo, ille operatur omnia in omnibus.'

Mosheim (*Instit.* II. v. 11) quotes the following from *de Novem Rupibus*, a private book of the Brethren:

'Moreover, the godlike man operates and begets the same that God operates and begets. For in God he worked and created heaven and earth. He is also the generator of the eternal word. Nor can God do anything without this man. The god-like man should, therefore, make his will conformable to God's will, so that he should will all that God wills. If, therefore, God wills that I should sin, I ought by no means to will that I may not have sinned. This is true contrition. And if a man have committed a thousand mortal sins, and the man is well regulated and united to God, he ought not to wish that he had not done those sins; and he ought to prefer suffering a thousand deaths rather than to have omitted one of those mortal sins.'

An indictment of a Beghard in 1367 is recorded by Döllinger in his *Sektengesch. des Mittelalters* (ii. 386). The charges may have been exaggerated, but they show at least what could be urged against the Brethren. The accused had declared, it was alleged,

'quod talis homo liber redditur impeccabilis et potest agere quidquid vult et sibi placet, et si natura inclinaret ad actum venereum, potest licite ipsum perficere cum sorore sua vel matre et in quocumque loco sicut in altari; et dixit quod magis naturale est talem actum venereum exercere cum uxore sua carnali quam cum alia muliere propter affinitatem naturae; et subjunxit quod perfectus liber a se licentiat virtutes sub tali distinctione, quod homo liber non est sub lege quocunque, nec tenetur ad statuta ecclesiae nec praecepta qualiacunque, quod talis est liber spiritu id est *ein fry Geist*, quod idem est quam homo liber, et statuta et praecepta ecclesiae debent saltem tenere grossi homines, id est homines sub lege existentes, quos ipse grossos homines appellat.'

The ecclesiastical councils of the 14th cent. condemned from time to time the doctrines of the Brethren, and the Inquisition added many of them to the number of its victims. One of those who suffered death (in 1310) was Marguerite de Hainault, described as *béguine clergesse*. She was charged with teaching that the soul absorbed in Divine love could yield without sin or remorse to all demands of the flesh. At the end of the century (in 1397), Nicholas of Basel, the most noted of the Brethren of his time, was burned, along with two of his disciples, at Vienna by the Inquisition. The famous Eckhart, the founder of the German Mystics, was harassed by the Inquisition, and, but for his natural death, might have perished as a heretic. John XXII. condemned twenty-eight articles said to be founded on Eckhart's teaching, and among these were the assertions of the common divinity of God and man, and of sin and virtue as the same in the sight of God. The accused, however, was not alive to defend himself. The famous company of the Friends of God sprang from the Brethren, Lea asserts (*op. cit.* ii. 365); but he admits that they 'avoided the deplorable moral extravagances of the parent sect.' Tauler was careful in his sermons to mark the difference between his doctrines and those of the Brethren, and the author of the *Deutsche Theologie* condemned theories which were those of the Brethren.

In the 15th cent. the Brethren, thanks to the Inquisition, were less active than they had been in the 14th; but amidst the Hussite troubles there was evidence of them in Bohemia, where the name of *Beghard* was modified to *Picard*. In 1453, Pope Nicholas V. ordered the wandering Beghards to ally themselves to the Tertiaries of the Mendicant Orders, and thus many of the Brethren, or those professing the doctrines of the Free Spirit, were brought under rule. Even then, however, the doctrines were not altogether suppressed, for in 1492, Friar John of Moravia was crushing Hussites and Beghards; and in the Libertines of the Netherlands, France, Germany, and Switzerland who flourished in the 16th cent., and even in some of the Anabaptists, were found doctrines and practices associating them with the Brethren of the Free Spirit.

[1897] 467-472, and the references there cited.

J. HERKLESS.

BRETHREN (Plymouth).—In the 2nd quarter of the 19th century the State Churches in Great Britain were worldly and dead; the Dissenters were orthodox and cold; the great Evangelical Revival was on the wane. Edward Irving had translated Ben Ezra's book, *The Coming of Messiah in Glory and Majesty*. He had been greatly moved by it, and was preaching that the Lord was coming. This had stirred people of all classes, and it seemed like the midnight cry: 'Behold the Bridegroom cometh.' It was in the midst of this state of things that the movement of Brethrenism originated (1827). The first 'Brother' was Edward Cronin, a doctor, who felt that true Christians, being one body in Christ, ought to be welcomed to the Lord's Table, wherever His Table was spread. But the movement received its impulse and direction from men far excelling Cronin in gifts and power. Anthony Norris Groves, a missionary to Syria and India, suggested to John Gifford Bellett, a lawyer: 'This, I doubt not, is the mind of God concerning us, that we should come together in all simplicity as disciples, not waiting on any pulpit or ministry, but trusting the Lord will edify us together by ministering to us, as He sees good, from ourselves.' This idea got hold of Bellett's mind, and was the germ of the movement. With Francis Hutchinson, John V. Parnell (afterwards Lord Congleton), and others, he organized a meeting in Hutchinson's house, to which Cronin came. In 1830, at Parnell's suggestion, they removed to a large room in Aungier Street, Dublin, so that they might be more of a testimony. Another eminent man associated himself with them, John Nelson Darby. Born at Westminster, London, November 18th, 1800, he graduated with honours at Trinity College, was trained for the law, but forsook it for a clerical career, and became a curate in Co. Wicklow, where he was reputed a saint on account of his holy life. He was now in the prime of life; his intellectual abilities were of the highest order; his piety was sincere and deep, while his power to hold men under his influence was the wonder of his foes and the admiration of his friends. The way in which he controlled the Brethren for fifty years exemplifies this.

Groves asserted that ordination to preach was not needed by a spirit-gifted minister; Cronin, that there was only one church-membership, viz. the body of Christ; while Darby, in a pamphlet written in 1828 (while he was a clergyman in the Irish Church), entitled 'The Nature and Unity of the Church of Christ,' set forth the principles of gathering to the Lord's name and the Church's union with Christ. Thus, Cronin, Groves, Bellett, Parnell, and Darby were the founders of the movement. It would be difficult to determine the relative influence of the first four, but, undoubtedly, Darby was the great leader and teacher.

To the company in Aungier Street many were

added between 1830 and 1832. At first they did not think of separating from the Churches around. This came as the result of their principles and practice, and when they increased in power and numbers. Darby visited Oxford in July 1830, where he met, amongst others, B. W. Newton and G. V. Wigram, both of whom came under his influence and power. A meeting was formed at Plymouth. Newton and other able men ministered there for years. From it the name 'Plymouth Brethren' was derived, while from Darby the name 'Darbyites' was received. Newton had a speculative mind, was grave and earnest, and became the most prominent leader at Plymouth. George Müller, brother-in-law to Groves, was the co-pastor with Henry Craik at Bethesda Chapel, Bristol. Both these and their congregation, in a measure, adopted the principles of the Brethren. A few brethren joined them, and one meeting was formed, but most Brethren now think this was a mistake. A gathering was formed at Rawstorne Street, London, and meetings sprang up both in England and Ireland. Between 1832 and 1838 meetings to study prophecy were held in Lady Powercourt's mansion, Co. Wicklow. They were attended by eminent clergymen, and Darby, Bellett, and Wigram went to them, and took part in them.

From 1830 to 1835 the movement swept on. J. L. Harris, a clergyman, joined the ranks of the Brethren. He edited their first magazine, *The Christian Witness*, to which Darby, Bellett, Newton, S. P. Tregelles and other writers contributed. It set forth the doctrines of Brethrenism with vigour and freshness (1834–40). A tract depôt was begun, from which issued a steady stream of tracts. The clergy became alarmed as several of their order joined the movement, which was at first, undoubtedly, a 'better-class' movement, containing lords, ladies, and officers not a few. The people were evangelized with great zeal; lay preaching was held to be the duty of all who had received grace and gift, and in the open air and in meeting-rooms the doctrines of Brethrenism were expounded. Separateness from the world was necessary; for the Lord was at hand, and every one must be ready to meet Him.

Groves went on a mission to Baghdad, and then laboured in India, with the result that many Anglo-Indians became disciples of the new faith. On returning to England, however, he found a stricter system of fellowship existing than when he left. He wrote to Darby protesting against this, but it was too late, for his own words to Bellett had raised a force which he could not now control.

Darby evangelized in Ireland, and visited Switzerland, where his success was phenomenal. The Evangelical Revival had taken place. He preached the Atonement of Christ, His Resurrection, Intercession, and Second Coming. He engaged in controversies with the Wesleyans and with Church leaders. Seventy companies of Brethren were gathered in Switzerland. He also visited France and Germany, where he gained many disciples. His labours extended, with intervals of visitations to England, several years. A reference to the first vol. of his *Letters* will show his great activity. Later, he devoted his attention to Germany, and translated the New Testament, and afterwards the Old, into German. G. Müller visited Germany in 1843. Ministering amongst the Baptists, he spread the tenets of the Brethren in the Fatherland.

Meanwhile, Newton remained at Plymouth, but, unlike Darby and others, never heartily adopted the doctrine of the Spirit's presence in the assembly, but set up what Tregelles called 'a modified Presbyterianism,' which was self-elected, and confined the services of prayer, praise, teaching, and rule to himself and those associated with him at Plymouth.

This was to be the model for all meetings, and an effort was made to carry it out. He denied the immediate return of the Lord, teaching that certain events must take place before He did come. He discouraged brethren who held opposite views from ministering. His lectures, copied in manuscript, were circulated widely amongst a select few. J. L. Harris and others, helpless to combat this state of things, left Plymouth. It was at this time (1845) that Darby returned. He had borne with Newton's views on the Second Coming, but would not tolerate the setting aside of the Spirit's presence in the Church, for that Darby viewed as the re-establishment of the clerical system that the Brethren had left in the Churches around. Darby maintained that by Newton's clerical control the Spirit was displaced in the assembly. He protested against this, but Newton and his supporters would not yield. Darby and many others withdrew from communion, and, after waiting from March till December, they broke bread apart from the Newton party at Raleigh Street, Plymouth. Indignation against Darby was intense. He had broken the unity of the Brethren, and they, who had testified to unity, were now in disunion. Darby's contention was that he 'could not maintain union to support evil,' and that 'truth was more to him than friends, religious reputation, or unity.' Two years' controversy followed, in which the leaders took part. Charges against Newton's writings and his rule in the Plymouth assembly were interwoven with the main issue, viz. the 'Spirit's freedom to use whomsoever He pleased in the assembly while gathered to the Lord's name for worship and ministry.' This was what Darby and his followers contended for, and it was this that Newton and his associates resisted. Round this same question of clericalism many later disputes arose and caused divisions.

In 1847, Newton's opinions on the sufferings of Christ came to light. He had taught, amongst a select body of disciples, that our Lord, being a man and an Israelite, was born relatively under the curse of God, which rested on the human race generally, and on Israel specially, on account of their having broken the Law and rejected their Messiah; and that, from childhood to His baptism in Jordan, Christ was obnoxious to the wrath of God, but escaped much on account of His prayer and piety. When Newton's views became known, they were rejected by the mass of the Brethren, and many of his former supporters, such as Soltau, Batten, Dyer, and Clulow, abjured their errors, and confessed they had been under the delusion of Satan as to their doctrines, and in supporting Newton. Newton made a confession, which was considered insufficient, and withdrew his tracts, which he never re-issued, for re-consideration. He admitted that in expressions he was wrong, and that in one particular he had erred, viz. in contending that our Lord was under Adam's federal headship. The meeting at Ebrington Street, Plymouth, was broken up. Newton removed to London, modified his views considerably, and formed a church of which he became minister, having no fellowship with any other religious body. He wrote largely on Prophecy, and in his writings there are passages of great literary beauty. He died in 1899, aged 92, having outlived all his compeers.

It was Newton's teachings that caused the first division amongst Brethren, which took place at Bethesda in 1849. Müller and Craik refused to allow a congregational judgment on Newton's

tracts. Several who had sympathized with Newton's views, and two Brethren who had imbibed his teachings, were received by the Bethesda congregation. It is a moot point whether Müller and Craik knew of the views of those disciples of Newton who did not openly promulgate them. Their reception called forth from G. Alexander and sixty others a vigorous protest. Müller and Craik would not allow the congregation to judge and condemn Newton's tracts until it adopted a paper called 'The Letter of the Ten,' signed by themselves and eight other leaders, and to which some of Newton's sympathizers adhibited their names. This paper committed the Church to a neutral position, and defined for years the ecclesiastical position of those afterwards called 'Open' Brethren. It became a document of discord, and a barrier to fellowship between the two great sections of the Brethren. Bethesda assembly adopted the paper, and retained the ministry of their pastors, who had threatened to resign unless this were done. To Darby, Wigram, Dorman, and others the position thus taken up was wrong, and they would not tolerate it. Darby was branded as a schismatic, and severely attacked. The result was that the dispute affected all the meetings throughout the land. Bethesda assembly, with its pastors, now took up the question. Seven meetings were held before the end of the year, as a result of which some of those who had supported Newton withdrew from fellowship, in order to relieve the Church from its dilemma. Two of these, on retiring, in a paper read to the congregation, declared that Newton was fundamentally sound. With some others they attempted to form a congregation, but failed, and were afterwards re-admitted to Bethesda on their confessing that they had erred in leaving. By Darby and those who agreed with him this was not considered a proper judgment of the evil doctrines. Müller and Craik both condemned Newton's doctrines, and declared that, if Newton's teachings were right, then Christ would require a Saviour Himself. But their judgment came too late, as what might have prevented a schism in July could not heal the division in December.

When Bethesda had judged the question in this fashion, Darby called on Müller with a view to reconciliation; but the accounts of the interview differ essentially, as can be seen by comparing Darby's letter to J. S. Oliphant with Müller's letter to an unknown correspondent in 1883. Darby issued a letter to all the Brethren condemning Bethesda, and calling upon all assemblies to reject her principles. He denounced as evil 'The Letter of the Ten,' which, he said, permitted association with a heretical congregation by allowing persons coming from it to have fellowship, provided they had not imbibed the evil doctrines. And this the Exclusive Brethren hold with inflexible strictness to this day. Fellowship with meetings where evil doctrines are held is repudiated, and no one is allowed fellowship unless he is sound doctrinally, and leads a godly life.

Henceforward Müller devoted himself to evangelical and philanthropic labours. He continued to be co-pastor at Bethesda. During the later years of his life he went on evangelical tours, and died on 10th March 1898, greatly honoured.

Müller and his followers took a definite stand against Darby, and the division became permanent. The Müller party was in the majority at first. J. L. Harris, W. H. Soltau, Lord Congleton, and other leaders sided with Müller, and stood for 'Open' principles, declaring them to be the original views of the Brethren. The Open Brethren devoted themselves to gospel work. Spurgeon called them a 'simple evangelical race.' They made converts in large numbers. They have had a number of earnest teachers and evangelists. Their books and tracts have been circulated in millions during the past fifty years.

Several attempts have been made to effect reconciliation with their Exclusive friends, one especially by Henry Bewley in 1870–71, but all have been unsuccessful. As late as 1892, the Exclusive Brethren in Grant's fellowship in America were approached with a view to reunion. In 1906, however, Bethesda adopted a declaration which had been drawn up in 1894 by fourteen leaders on their own responsibility, and was now signed on behalf of the Assembly by eleven Brethren. It explained and modified some of the objectionable statements in 'The Letter of the Ten,' and had as its object a union with G. W. Heath and his associates who sought the re-union of all sections of Brethren. This movement is still in progress.

Amongst the Open Brethren disputes have been few. Their principal dispute, which took place in 1892, was over what is called the 'Needed Truth' question. The majority rejected the 'Needed Truth' principles, which were: (1) complete separation from all Christians not in their own fellowship; (2) only those baptized after conversion to be allowed to break bread; (3) elders in the oversight to be recognized in the place of rule over the assemblies. The movement has not been a success, as many of the 'Needed Truth' party have returned to the 'Open' fold, and in 1904 a dispute arose causing division amongst that party. The 'Open' Brethren are active and earnest, fraternize freely with other Christians, and do not evoke the same opposition as the 'Exclusives.' Their meetings are numerous, being established in nearly all large towns. It is generally admitted that in writers they are poorer than the Exclusives; still they have had some able writers, such as Thomas Newbery, editor of a valuable edition of the Bible, J. Denham Smith, W. Lincoln, Arthur Pridham, W. H. Soltau, etc.

From 1849 to 1879 the Exclusive Brethren had a period of prosperity. In 1849, G. V. Wigram commenced their chief organ, which extended to 18 vols. (1849–81), the *Present Testimony*. To it Darby contributed his 'Synopsis of the Books of the Bible,' and other writers gave of their best. It was in 1845 that William Kelly, the son of an Ulster squire, and a graduate with highest honours in Classics at Dublin, joined the movement. After having edited *The Prospect* (1848–50), he, in 1856, took up the editorship of the *Bible Treasury*, which he conducted for fifty years. To it Darby, Stoney, Mackintosh, Denny, Grant, Bellett, and others contributed, and, though its editor has passed away, it is still issued, and is the oldest organ of the Brethren. All their chief doctrines and controversies have been discussed in its pages. It was in it that Kelly's 'Commentaries' first appeared. W. H. Dorman edited the *Girdle of Truth*, 10 vols. (1855–66); J. B. Stoney conducted *A Voice to the Faithful* for thirty years; and C. H. Mackintosh, who had been engaged in scholastic work, and had given it up (1853), wrote *Notes on the Pentateuch*, which has had a wide circulation, and has greatly popularized Darby's views. There were many other publications during this period of great activity, which strengthened the Exclusive movement; and a ceaseless circulation of books and tracts went on. The Revivals of 1857–60 and 1870 got a considerable impetus and colouring from the Brethren, and, ultimately, many of the converts joined their assemblies. A band of young officers resigned their commissions, devoting themselves to evangelizing and teaching. England, Ireland, Scotland, Canada, and the

United States came under their labours, and to this day some of these continue teaching the tenets of the Brethren, such as E. Cross and J. W. Smith.

Darby and Wigram visited foreign parts again and again. Though small at first, Darby's success in America was considerable. He influenced two men, viz. F. W. Grant and Dwight L. Moody. Grant joined the Exclusive Brethren's fellowship, and became their foremost author and leader in America, and meetings were established in most of the great American centres. In 1864, Dr. W. Wolston came to Scotland. Then there were meetings only in Edinburgh, Glasgow, and Aberdeen, but, chiefly through his labours and those of others, gatherings sprang up all round, though many have died out since. Another man, William Reid, a Scottish clergyman, helped the movement greatly. He edited the *British Herald*, which had a wide circulation, and in it were inserted the choicest writings of the Brethren. In 1864, Bellett died. His piety and writings (which have been called prose-poems) left a deep impression on the Brethren, and greatly moulded their theology. It is worthy of note that, amid all the bitter controversies of those days, he was beloved by all parties. In 1872, Wigram visited Australia, where he gained many converts, and where, to this day, the tenets of the Brethren are taught and believed in.

From 1849–79 might be termed the flowing tide of the Exclusive movement. Though attacked and assailed on all hands, they steadily increased in numbers. Between 1858–66 controversy arose regarding some articles on the 'Sufferings of Christ' contributed by Darby to the *Bible Treasury*. W. H. Dorman and P. H. Hall charged him with holding views similar to Newton's. He offered to retire from fellowship, but the mass of the Brethren refused to regard him as a heretic. The controversy was bitter. Dorman, Hall, and others retired from communion, but formed no party. A host of writers attacked the Brethren. Darby, Kelly, and others replied vigorously. Darby's views were eventually adopted, and the controversy died down. Two other small disputes of no consequence occurred, one at Jersey, the other at Sheffield. Then in 1876, at Ryde, Isle of Wight, a dispute arose regarding marriage within the prohibited degrees. A clergyman, named Finch, who had left the English Church, and had broken bread in London, would not, on his return to Ryde, identify himself with the Ryde meeting because of its state, but, with some others, broke bread apart. In 1879 the aged Dr. Cronin, while on a visit to Ryde, broke bread with the Finch party. This brought the matter to a climax. On returning to London, Cronin was challenged for his action. As he affirmed that he was right, his act became a question for judgment. The Kennington meeting, though slow to judge, condemned his act, and on 31st August 1879 he was excluded from fellowship. It is generally conceded that serious blunders were committed during this dispute, with which the question of baptism mingled; and, as a result of it, the Ramsgate meeting divided into two parties, called after the names of the places at which they met, viz. Guildford Hall and Abbotshill. Finally, a letter commending a person from Guildford Hall was presented at Park Street, London. That meeting, after considering the case, decided to receive that person. This entailed the rejection of Abbotshill. Kelly, with others, maintained that this judgment was wrong, and would not accept it, even though his old leader Darby was the adviser. The result was that Blackheath, where Kelly resided, with other meetings, rejected the Park Street judgment, upon the plea that it was not the voice of all the London meetings, which hitherto had always acted in unison. A new section of Brethren was formed, led by Kelly, and marked by very exclusive principles. They have not increased in numbers, and in 1899 a revolt, led by W. W. Fereday, took place on the question of freedom in preaching the gospel; but he has since joined the Open communion, and the movement is dissolved.

Kelly died at Exeter on 27th March 1906. Next to Darby he was perhaps the greatest amongst the Brethren. As a scholar, an expositor, and a controversalist, he stood high, and had a clear and convincing style of expression. When he died, the *Times* and many religious magazines proclaimed him the 'Nestor' of the Brethren. His works are highly spoken of by such scholars as Ewald, Westcott, and Sanday. In the British Museum catalogue his works fill ten pages. On the suggestion of the Archbishop of York, he presented his unique library, weighing 17 tons, to the town of Middlesborough.

Darby died on 29th April 1882. He felt keenly the Kelly division, as can be seen from one of his last letters to the Brethren, in which he requested them not to attack Kelly. His writings extend to 50 vols., and he translated the Bible into English, German, and French.

A small division, occasioned by S. O'Malley Cluff, took place in 1881, but the party is now nearly extinct.

In 1882, after fifty-five years spent amongst the Brethren, the aged Dr. Cronin died. He was marked for his piety and fervour. Previously (in 1879) Darby's trusted friend, G. V. Wigram, had passed away. He was the editor of the *Englishman's Hebrew and Greek Concordances to the Old and New Testaments*, a work of accuracy and scholarship on which he spent a fortune, and in the production of which he received invaluable help from the learned Tregelles, who had been identified with the Brethren in their early days, but had disagreed with their judgment in the Newton case.

When Darby died, J. B. Stoney, whose religious ideas and teaching were said to be High Church, became leader in Britain; while, in America, F. W. Grant, who had put forth, while Darby was alive, some views on the 'Old Testament Saints having life in the Son,' and had affirmed that 'the man in the seventh of Romans was sealed by the Holy Spirit,' became leader. Darby had borne with Grant's views, but now that Darby was gone, fault was found with them, especially by Lord A. P. Cecil. Grant published his views in a pamphlet, which was severely criticized by W. J. Lowe and A. C. Ord. In 1884, Cecil and Alfred Mace, the evangelist, visited Montreal, where they condemned Grant's views, and, with a majority of the Montreal meeting, pronounced him a heretic, and excluded him from communion. This action affected only America and the few followers of C. E. Stuart in England. Most of the American meetings sided with Grant, and the Grant company prospered greatly. Mace in 1905 tendered a confession to the Grant Brethren for his rash act, lamenting that the man he had chiefly wronged was dead. Grant's death in 1903 prevented his completing his *Numerical Bible*, a work of considerable merit. He was beloved and honoured by those amongst whom he had laboured for forty years.

In 1885 a dispute took place at Reading. C. E. Stuart, a learned Brother, published a pamphlet on 'Christian Standing and Condition.' This provoked a controversy mingled with a petty local quarrel, and brought about the separation of

Stuart, with a small body of followers in England and some in the north of Scotland. The party has not grown, and Stuart died in January 1902. It is now generally thought that, if the pamphlet had been left alone, it would have passed into oblivion, and this division would have been averted. The Grant section in America and the followers of Stuart are now joined in fellowship.

During the last ten years of Stoney's leadership there was associated with him F. E. Raven, who went even beyond Stoney in pressing the subjective side of truth. About 1890, Raven expressed views such as that 'eternal life is not imparted to the saint; it is a sphere in which he lives in the love of God,' and is distinct from the new birth; Christ did not manifest eternal life to the world, but only to His own; 'Eternal Life' is not a title of Christ prior to incarnation, and the righteousness of God in 2 Co 5^{21} is future. Irreverent expressions concerning Christ's infancy were used by some of Raven's followers. These were condemned, but, nevertheless, a separation took place at Bexhill. This assembly refused to receive from Greenwich a person commended in the usual way, and cut off Raven and his meeting from fellowship. The Bexhill decision was upheld by W. L. Lowe, H. H. MacArthy, C. Stanley, and others in England, and by A. H. Rule and others in America; while, on the Continent, C. Brockhaus and many Dutch, French, and Swiss Brethren refused Raven's views. In England the division was serious. In France, Germany, and Switzerland the Brethren practically as a whole rejected Raven's doctrines.

At a conference in 1895, Raven questioned the ancient formula, 'the unity of His Person,' when applied to Christ's being God and man in one Person. His definition of Christ's Person was 'a Divine Person in human condition.' He affirmed that the Incarnation did not change or add to the Person of the Son. These and other assertions caused trouble. W. T. Turpin, a gifted Brother, who had long been in fellowship, retired from the Brethren; and many of their best men, though still remaining in communion, did so with much misgiving. Raven's teaching was severely criticized by Brethren outside his own communion, such as E. A. Thomas (Australia), F. W. Grant (America), and W. Kelly (England). Raven did not press his views, but his followers did. His visit to America in 1898 caused a division at Minneapolis. The extremists pressed his views too much, and some English Brethren supported E. Acomb, who opposed Raven; but most of the London leaders upheld Acomb's opponents. A small number were recognized as being in fellowship by the London Brethren in July 1905. These had all accepted Raven's views. J. S. Oliphant and Mace protested against the reception of this party, and would not withdraw their protest; so they were excluded from fellowship by the London leaders. It was at this time that Mace joined G. W. Heath in his attempt to amalgamate the different companies of Open and Exclusive Brethren.

Another storm burst after Raven's death. Several evangelists were preaching with considerable freedom, claiming the right to act on their own responsibility in their work. This was pronounced 'looseness and independency.' J. Taylor, of New York, set forth the view that 'we are saved by Christ and what He has established down here, viz. the Church or House of God.' A brother named James Boyd visited Taylor, and thereafter judged Taylor's views to be semi-Romanism. He wrote criticizing Taylor's errors. A controversy ensued. Boyd was called upon to withdraw his tract, or retire from fellowship. He would do neither, and in this he was supported by a great many Brethren in the north of England.

In 1905–7 a local dispute arose at Alnwick, Northumberland. That meeting was 'broken to pieces,' it was said, 'by its own folly.' Efforts were made to effect a reconciliation. At the end of two years (1907), Glanton and the neighbouring assemblies, with the concurrence of most Brethren in the district, decided to receive any person who had judged himself and sought reconciliation with his Brethren at Alnwick. This had been the practice of Brethren hitherto; but those who opposed Glanton's action in so doing pronounced this an infringement of the principle of 'local responsibility' and an interference with the Lord's rights. A few withdrew from fellowship at Newcastle and South Shields, and so forced on a crisis. An effort was made to suspend fellowship with the Northumberland meetings, as they were said to be 'in confusion.' This principle of 'suspending fellowship' was resented in many places; and, finally, when a sister from Whitley Bay presented a letter of commendation at George Street, Edinburgh, the Brethren there refused this principle of 'suspended fellowship,' and received her. There was a secession in consequence, and those opposed to Glanton formed a new meeting. The London Brethren were called upon to consider the rival claims of the two companies in Edinburgh, when a sister presented a letter to a London meeting, and most of the London meetings decided that Glanton infringed the principle of 'local responsibility,' extinguished the Alnwick assembly, and 'usurped the Lord's functions' in so doing. This decision, carried into effect 31st August 1908, cut off Glanton, Edinburgh, and all other meetings associated with them. W. T. P. Wolston's pamphlet, 'Hear the Right,' gives the history of this last division, and deals in detail with all the contributory causes that led to it.

Such is a very brief outline of the history of the Brethren. Forty years ago their early dissolution was prophesied; but they are still, though divided, a living force. Their religion is a simple one. The Bible to them is an infallible and living book; Christ is an all-sufficient and living Saviour; God is a loving Father revealed in the Son of His bosom; salvation is a reality, and can be known now; Heaven with its glories, and the everlasting Kingdom of our Lord and Saviour Jesus Christ, are proclaimed, and believed in; the Lord's Coming is the great object of hope; the world is under the judgment of the Cross, and men must be saved from impending doom; Hell and eternal punishment are realities; the world's politics, philosophy, and mere social reform advocated for the betterment of the world are but the whitewashing of a house built on sand, or the attempted renovation of a system morally corrupt; their mission is not to save the world but to save people out of it, and while passing through it the Christian is to live soberly, righteously, and godly; his business is to get right and keep right in his soul with God; it is his duty to obey the powers that be, save only when the civil government interferes with his conscience in obedience to God's command. The Brethren all take the place of the Christian priesthood, and gather to the Lord's name. They look for His Holy Spirit to guide some brother to break the bread, pray, or minister, in subjection to the Lord in the midst. Women are not allowed to speak in the assembly. Their teachers minister by lecture or Bible-reading; their pastors care for and tend the flock, while their evangelists preach the gospel. In the present condition of the Church they do not believe in appointing elders, seeing that their meeting is but a fragment of the body of true

Christians resident in their own locality, and some who might be elders are in the churches around. If, however, in their meetings there be men possessing the requisite qualifications, these are thankfully owned and honoured, though not officially appointed. Statistics of Brethren cannot be ascertained, but they form a good proportion of the Christian community in Britain and America and on the Continent.

LITERATURE.—The clearest statement of the general views of the Brethren is found in Darby's *What I Learn from Scripture*, which was revised by Wm. Kelly in his *Bible Treasury*, and is published by Morrish, London, as a tract. The following is a select Bibliography from hundreds of books and pamphlets, and gives both sides of their disputes, and what is written against them:—For the general history of the Brethren: W. B. Neatby, *A History of the Plymouth Brethren*, 1901; J. S. Teulon, *History and Teaching of the Plymouth Brethren*, 1883; A. Miller, *The Brethren: their Rise, Progress, and Testimony*, c. 1877. For the Plymouth Question: J. N. Darby, *Narrative of Facts, Proceedings at Rawstorne Street*; Lord Congleton, *Reasons for Leaving Rawstorne Street*. On the Sufferings of Christ: Wm. Trotter, *The Whole Case of Plymouth and Bethesda*, 1898. On Bethesda: G. V. Wigram, *The Present Question*, 1848–9; H. Groves, *Darbyism, its Rise and Development: A Review of the Bethesda Question*, 1867; J. N. D., *The Sufferings of Christ*; W. H. Dorman, *The Close of Twenty-eight Years of Association with J. N. D.*, 1886. On the Law and the Righteousness of God: J. N. D., *Brethren and Their Reviewers*; S. P. Tregelles, *Five Letters of the Recent Denials of Our Lord's Vicarious Life*, 1864. On the Ramsgate Question: J. H., *A Fresh Testimony . . . Ecclesiastical Error . . . an Epitome of the Ramsgate Sorrow*, 1882. On Grant and Montreal: *Narrative of the Facts at Montreal*, 1884; E. C. L. and E. Crain, *Statement of Separation*; F. W. Grant, *Letter on the Montreal Division*. On Reading: C. B., *The Reading Question, the History and Review*; F. H. B., *A Concise Statement of the Reading Question*. On F. E. Raven, or the Bexhill Division: F. E. R., *Papers on Eternal Life*, etc.; H. A. Hammond, *Record of Some Correspondence, Documents, and Facts*, 1890–1. On the attempted union of Open Brethren with Grant: F. W. Grant, *What is the Present Position of Open Brethren?* 1888. On the second Raven trouble: F. E. R., *Readings and Lectures in United States and Canada*, 1898–1902; Wm. Kelly, *F. E. R.'s Heterodox on Eternal Life and other Divine Truths*; F. W. Grant, *Retracings of Truth*; E. A. Thomas, *Refutation of False Doctrine, being Truth for the Time* (No. 8). On the American and English troubles: J. S. Oliphant, *Minneapolis*, 1905; J. Taylor, J. Pillatt, and others, *Readings at Chicago, Dec. 1904 and Jan. 1905; Letters from J. Boyd on American Teaching*, 1908, 1909; W. T. P. Wolston, *Hear the Right; Two Letters by H. Vinal on the Glanton Question*. On 'Needed Truth' and Open Brethren Dispute: *Brief Statement of the Doctrines of Holy Scripture* (views of the 'Needed Truth' party). For attacks on the Brethren generally (of these there are many, but the following are the strongest): W. Reid, *Plymouth Brethrenism Unveiled and Refuted*, 1880; *The Plymouth Brethren, their Rise, Progress, Practice, and Doctrines*, a lecture by Edward Dennett, 1871. To this, Dennet himself replied later when he became a Brother, in his *The Step I have taken*, 1876. See also J. C. L. Carson, *The Heresies of the Plymouth Brethren*, 1870; Thomas Croskery, *Plymouth Brethrenism*, 1879.

BRIDE, BRIDEGROOM.—See MARRIAGE.

BRIDGE.—To the awe with which primitive man regarded the flowing of a wide, deep river, effectually barring his access to the opposite side, may be traced an extensive series of superstitious and religious practices current in former ages, and still observed in modified forms to-day. The subject may be approached under the following three postulates: (i.) To all early races, rivers were part of a Divine scheme for delimiting frontiers, for apportioning territories to the different races of mankind, and for obstructing the interference of district with district. Rivers accordingly acquired a semi-sacred character, and each stream had its tutelary divinity. The torrent that foamed across man's path was the vomit of a local demon. (ii.) To interfere with what the gods had laid down as a natural boundary, to bridge the stream which had been intended to act as a barrier to the insatiable and the restless curiosity of man, was a daring, nay, a sacrilegious act. In the event of a bridge being built, therefore, the local river-spirit must be appeased by some compensating sacrifice. (iii.) Once this sacrifice has been made, and the river-spirit been placated, the bridge becomes in a sense sacred. It is the aim of this article to trace out the ramifications of these three fundamental ideas.

i. THE PRIMITIVE CONCEPTION THAT EACH STREAM HAD ITS RESIDENT DIVINITY OR RIVER-SPIRIT.—It is beyond the scope of this article to marshal the evidence in support of this first notion. The conception that each stream had its protecting divinity, whose majesty must not be trifled with, was a very common one in Greek and Roman mythology. The customary emblematic representation of the idea in Greek art was that of a figure of an old man with a long beard, clothed in blue garments, and crowned with a chaplet of reeds. He is usually depicted reclining upon an urn from which water continually flows, and, as the river-god, he was supposed to dwell by preference in the caverns and deepest recesses of the river's bed. His care of the river extended to its pollution, and Homer (*Iliad*, xxi. 136 ff.) has described the resentment of the two rivers of Troy, the Scamander and Simois, against Achilles, when he presumptuously profaned their waters. (For further illustration of the hostility of a river-spirit if his majesty be insulted and his quiet disturbed, see J. Rhys, *Celtic Folklore*, ii. 425–430; W. Gregor, *Folklore of the North-East of Scotland*, pp. 66, 67; *Trans. Asiatic Soc. of Japan* for Ainu river-gods and goddesses; J. Abercromby, 'Beliefs and Religious Ceremonies of the Mordvins,' in *FLJ* vii. 72; also *Annales Archéol.* tom. ix. pp. 107–108; and for the idea of the impiety of disturbing natural boundaries, cf. Horace, *Carm.* i. 3. 21: 'Nequicquam deus abscidit Prudens Oceano dissociabili Terras, si tamen impiae Non tangenda rates transiliunt vada').

ii. THE APPEASING OF THE OFFENDED RIVER-SPIRIT.—1. **Was this observed in connexion with the Pons Sublicius?**—The necessity of some expiatory sacrifice to the river-god, when a bridge was built across the stream, defying his supremacy, seems to have been recognized at a very early period. The early history of Rome shows traces of it. Probably not more than three bridges were erected over the Tiber before the end of the Republic. Of these the most ancient and by far the most famous was the *Pons Sublicius*.* Erected by Ancus Martius to unite Rome to his new fortification on the Janiculum, it was probably situated at the Forum Boarium, not far from the broken arches of the Ponte de Rotto (Livy, i. 33; Dionys. iii. 45, ix. 68; Plut. *Numa*, 9). Down to its latest days, the entire structure, including every bolt and fastening, was constructed of timber [for the reason for this see p. 855]. On the Ides of May (Ovid says the day before), an annual procession of Pontifices, Prætors, and Vestal Virgins marched to this bridge. On the way they visited the so-called 24 *Sacella Argeorum* (chapels), and from them carried away a corresponding† number of *Argei*. These *Argei* were puppets or effigies made of bulrushes, and stuffed so as to represent bodies of old men bound hand and foot. The Flaminica Dialis, the priestess of Juppiter, was present, dressed, not in her customary bridal attire, but in mourning garb. To the accompaniment of the chanting of appropriate hymns and prayers, the puppets were lifted by the Vestal Virgins and flung into the river from the parapet of the bridge (Dionys. i. 38; Ovid, *Fasti*, v. 621 ff.; Plutarch, *Quæst. Rom.* 32 and 86). Of a custom so peculiar,

* From the *sublices*, or piles, on which it was built.
† Dionysius gives 30 as the number.

the Roman antiquarians suggested various explanations:—

(*a*) The *Sacella* were reported to be the graves of the Greeks who came to Italy with Hercules, and the *Argei* were his followers. Though settled in fair Italy, they entertained tender memories of sweet Argos; and, as each hero died, he bequeathed to his friends the sacred duty of throwing his body into the Tiber that it might be transported by the waves to the far-off shore of his fatherland. The rush-made image was the later substitute for the dead body of the early Greek (Ovid, *Fasti*, v. 656). The ancient etymology of *Argei* from 'Αργεῖοι is supported by Mommsen (*Staatsrecht*, iii. 123).

(*b*) The second explanation of the practice was that it was the harmless survival of an earlier and ruder epoch, when old men, above the age of sixty, being considered useless for military service, were cast into the stream and drowned. Though Ovid acknowledges that this traditional explanation was an old one, he nevertheless indignantly repudiates it as a slander on the humanity of his ancestors. Such practices, however, were not unknown in the ancient world. That those past their prime, and afflicted with the increasing infirmities of age, should thus be put to death, was not considered incompatible with filial piety, but rather in the line of kindness, and even of patriotic duty to the State (Cæsar, *de Bell. Gall.* vi. 16; Tac. *Germ.* 9 and 39; cf. also art. OLD AGE).

In later days there arose a belief that the *pons* from which these old men were flung was a more innocuous structure than the Pons Sublicius. On the day of the Comitia, a number of polling-booths were erected in the forum, or wherever the voting was to take place. These booths, or *septa*, were entered by a narrow passage or plank termed *pons* or *ponticulus*, and, when the voter had received his *tabella*, or voting-ticket, out of one of the large vases called *sistæ* or *cistellæ*, he passed along the *pons*, and emerged from the booth by a corresponding 'bridge' on the other side (Cicero, *in Pison.* 15. 40, *pro Plancio*, 6, *pro Harusp. resp.* 20). Festus (p. 334, *s.v.* 'Sexagenarii') argues that, though the aged men were free from the burden of active service for the State, they jealously retained their right to vote. The younger men accordingly were annoyed, and, as their seniors went up the *pons* to record their vote, they raised the cry, which became proverbial, that the old men should be thrown from the bridge ('sexagenarios de ponte'). Ovid (*Fasti*, v. 634) states that the youths actually threw the old men from the bridge (see Cic. *pro Roscio Amerino*, 35. 100; Varro, *apud* Lactant. *Inst.* i. 21. 6). But as these voting *pontes* were comparatively late institutions, and the proverb is a very old one, it would seem after all that the bridge referred to was not the plank of the Comitia polling-booth, but the more fatal Pons Sublicius. The fact, however, remains that parricide was always looked on with horror by the Romans, and it is hard to see how the practice should have passed into a yearly ceremony.

(*c*) By others the rite was regarded as a relic of the time when human sacrifices were general. Ovid states that it was believed by some that Hercules was the first to throw into the stream as sacrifices to the river-god, not living citizens, but fictitious bundles of straw. That human sacrifices were not infrequent in the early days of the Republic is shown by the evidence collected by Merivale (*Hist.* iii. 35). O. Müller (*Etrusker*, ii. 20) believes that the practice was introduced into the Roman cultus from Etruria. It continued down to A.U.C. 657, when Cn. Corn. Lentulus and P. Licin. Crassus, as consuls for the year, made a law which, for the future, prohibited any such human sacrifices. There is, therefore, nothing inherently impossible in the notion that the Pons Sublicius was the scene of primitive human immolation. J. G. Frazer points out (*JPh* xiv. [1885] p. 156, note) that, in early Rome, bridges, being novelties, were viewed with suspicion. They were an insult to the river-god, inasmuch as 'they robbed him of his food by carrying dry-shod over his head the people who, in the course of nature, would have been drowned at the ford.' Thus arose the practice of yielding to Father Tiber a yearly compensation, at first of living citizens who were flung into the river, but later of substitutes in the form of stuffed effigies of old men.

On the other hand, W. Warde Fowler (*Roman Festivals*, p. 112 ff.), in an elaborate analysis of the ancient rite, arrives at the conclusion that the ceremony was dramatic rather than sacrificial, and had primarily to do with the annual purification of the land. He dwells upon the presence at the rite of the Pontifices, and especially of the Vestals, on whom lay the duty of throwing the puppets into the stream, the idea being that the food and nourishment of the State depended on an accurate performance of their duties. He points to the presence and the dress of the Flaminica Dialis, who appeared in this garb only on those great occasions of purification that marked the conclusion of one season, and the beginning of a new season which must be entered on with great care. It was something akin to Adonis-worship, which in Egypt was observed in the same method by the immersion in water of a puppet accompanied by wailings. Mannhardt (*Ant. Wald- und Feldkulte*, p. 276) mentions a Russian practice in which figures of straw, dressed in female clothing, are laid on a bier, carried to a lake or river, torn up, and thrown in, while the spectators hide their faces and wail; and again, in another district, on the same day (June 29th), an old man is carried out of the town, as a symbol that spring has gone, and is followed by *women* singing mournful songs, and indulging in gestures of grief.* Mannhardt (*Baumkultus*, chs. iii. iv. v.) gives many instances from mediæval and modern times of the practice of similar rites, showing that the place of the puppet is sometimes taken by a sheaf, a small tree, or a man or boy dressed up in foliage or fastened in a sheaf. In almost every case the puppet is ducked in water or sprinkled, though sometimes it is burned or buried. The Bavarian *Wasservogel* was an effigy which was carried round the fields at Whitsuntide and then thrown from a bridge into a stream. There is still extant a law passed in A.D. 1351 forbidding the ducking of persons at Erfurt at the Easter or Whitsuntide festivals. Warde Fowler follows Mannhardt in maintaining that all this is a symbol of the departure of winter, and the arrival of the fruitful season. In support of this theory he points out that, while the old Roman practice was to throw in 'old men,' it is a curious coincidence that the name of the puppet thrown in at Whitsuntide at Halle is 'der Alte.' The German puppet, again, is *white*, and the Roman effigy bore a name 'Αργεῖοι, which is probably derived from a root *arg* (seen in *argentum*), meaning the *white* ones (=the old ones). This explanation, however, though it explains some things very aptly, and fits in with some otherwise obscure details, fails to give any satisfactory reason why *a bridge over a river* should be the scene of the purification of the *land*, or why in each case there should be *water*, and the casting of a puppet into a *stream*. We come back, therefore, to the view, supported by a multitude of corroborative facts, that the casting into the stream in early times of a live victim, and the substitution in later ages of effigies, were due to a belief in the necessity of placating the river-spirit, whose majesty was offended by a structure spanning his waters, the very object of which was to rob him of his toll in human victims.

2. This root-idea of the necessity of a sacrifice traced to modern times.—The wide-spread nature of this custom will be recognized from the following instances. Herodotus (ii. 90) states that the priests of the Nile-god claimed the right to bury with high honours all bodies drowned in the river, 'as being something more than human.' The god had claimed them, and they were his property. Maspero (*Dawn of Civilization*, p. 39) describes the sacrifices to the river at Silsileh on the rising of the Nile. See also Lane (*Mod. Egyptians*, ch. xxvi.) for the *'arooséh* (bride)—the virgin thrown into the river as a sacrifice to obtain a plentiful inundation. Picart (*Cerem. and Relig. Cust. of the World*, 1733, iii. 87) refers to the practice of the savages on the Mississippi of sacrificing prisoners to the genii who preside over the waters. Compare also the yearly sacrifice of a girl to the spirit of Niagara. When a man is drowning in a river, it is a common saying in Germany that 'the spirit of the stream is getting his yearly victim' (Grimm, *Deutsche Mythol.* p. 409). There is a legend that the spirit of the river Ribble, in York-

* In Silesia, as late as the 16th cent., according to Guagnini (*Sarmatiae Europeae descriptio*, fol. 10*b*), on March 17 of each year, being the anniversary of the destruction of the pagan idols by Mieczyslaw I. (962–992), 'pueri in villis et oppidis ex more recepto simulacrum quoddam ad similitudinem mulieris conficiunt, oppidoque turmatim egressi quandam cantionem ingeminantes simulacrum illud de ponte in flumen præcipitant.' This would seem, however, to be merely a sort of Guy Fawkes celebration of the destruction of paganism. In this general connexion it should be noted that Gruppe (*Griechische Mythologie und Religionsgeschichte*, p. 821) holds that such ceremonies as those associated with the *Argei* were originally rain-charms.

shire (known as Peg o' Nell), demanded a victim every seven years (W. Henderson, *Folklore of the Northern Counties*, p. 265); and the American Indians have a tradition that the Falls of Niagara must have two human victims annually. The notion, however, is very prominently brought out in the following connexions:—

(*a*) *Sacrifices necessary at the foundation of bridges.*—A legend is current about London Bridge that, in order to render the structure secure, the stones were besprinkled with the blood of little children. When the broken dam of the Nogat was repaired in A.D. 1463, the peasants were advised to throw in a living man. They seized a beggar, made him drunk, and buried him (Tylor, *Primitive Culture*[3], i. 104). In 1843, on the erection of a new bridge at Halle, it was widely believed that the structure ought to have had a child built into it (Grimm, *op. cit.* p. 956). The builder of the 'Loh-Family Bridge' at Shanghai experienced some difficulty in laying the foundation. He vowed to Heaven 2000 children if the river-spirit would allow the stones to be laid properly. The divinity (she was a goddess on this occasion) replied that she would not require their lives, but that the number named would be attacked by smallpox. The epidemic actually broke out, and half the number died. It is a Chinese belief that a bridge built without attention to these religious observances will bring about a visitation of smallpox. In Tibet, when smallpox is raging, the inhabitants of the villages as yet untouched by the disease try to stay its progress by placing thorns on the bridges to terrify away the evil spirits who bring the plague. Those who die of the disease are thrown into the rivers (Annie W. Marston, *The Great Closed Land* [Tibet], p. 41). At Hang-Chow, a tea-merchant cast himself into the river Tsien-tang as a sacrifice to the spirit of the dykes which were constantly being washed away (Moncure D. Conway, *Demonology and Devil-lore*, 1879, i. 204). In 1872 there was a scare at Calcutta when the Hooghly Bridge was built. The Hindus imagined that the spirit of the river would consent to have its majesty invaded only on condition that each pier of the structure was founded on a layer of children's heads (A. B. Gomme, *Traditional Games of England, Scotland, and Ireland*, i. 346 ff.; G. L. Gomme, *Folklore Relics of Early Village Life*, p. 29). In 1890 the *Pall Mall Gazette* reported that heads of unwary travellers in China were being cut off, and £10 was being paid for each head by the Department of Public Works in order that they might be built into the foundations of the piers of a number of new bridges that were in course of erection. It was stated that such was the terror of the coolies that for no money could they be induced to carry fares to the suburbs at night. (For a similar story see *Nature*, April 30, 1896, under title 'Megalithic Folklore,' by S. E. Peal, Sibsagar, Assam, March 27.) Among the popular traditions of Albania, there is one to the effect that human beings were formerly buried under the foundations of important bridges. Throughout the Greek East there is a current belief that every building has a resident spirit, and every stream a resident genie, which goes by the name of the στοιχεῖον. It is believed that the man whose shadow falls on the first-laid stone of a house will die within the year, and his shadow, remaining in the building, becomes its στοιχεῖον; hence the practice of sacrificing fowls and sheep at the beginning of any important construction to avert danger from the workmen. 'But sometimes, instead of killing an animal, the builder entices a man to the foundation-stone, secretly measures his body, or a part of it, or his shadow, and buries the measure under the foundation-stone; or he lays the foundation-stone upon the man's shadow. It is believed that the man will die within the year' (B. Schmidt, *Das Volksleben der Neugriechen*, p. 196 f., quoted by J. G. Frazer, *Golden Bough*[2], i. 291). Until a sacrifice has been offered to this spirit, no bridge will be allowed to stand secure. A bridge so secured is termed 'stoicheion-built' (στοιχειοθεμελιώμενα), and legends regarding such bridges are everywhere met with. Some of the Greek folk-songs are famous, *e.g. The Bridge of Adana in Kappadocia*: 'All day long they built the piers: by night they fell in ruins.' The builders are at their wits' end. They know that the bridge will never stand until a living spirit is given to it in sacrifice. But who is willing to be thus offered? The engineer entices his wife to the edge of the excavation for one of the piers. He drops his ring into it, and induces his wife to fetch it up:

> 'Then down goes she, and down goes she, steps forty-two descends she,
> And fall upon her as she goes of stones a thousand litras,
> And throw they down upon her, too, of earth a thousand spadefuls.'

As she dies, she calls out:

> 'Hear thou my words, Yiannáki mine, let not the world rejoice thee,
> Three only sisters once were we, we were three sisters only;
> The one did build the Danube's bridge, the second the Euphrates,
> And I, I too, the murdered one, the bridge build of Adana'

(Lucy M. J. Garnett and J. S. Stuart-Glennie, *Greek Folk Poesy*, 1896, p. 71).

The same legend is current in Italy as regards the Bridge of Arta, which collapsed till the master-builder walled in his wife. With her dying curse, however, she prophesied that the bridge would always tremble (*ib.* p. 81). The same story is told of the 'Lady's Bridge' in Peloponnesus (*ib.* p. 70) and the 'Trembling Bridge' near Canea in Crete. So engrained is the belief in the necessity of such sacrifices, that it is alleged that in Zacynthus the inhabitants would still kill a human victim if they were not deterred by fear of the law's vengeance (B. Schmidt, *op. cit.* p. 197 ff.). The idea that underlay the old Roman substitution of rush-men for human victims is still observable occasionally in different parts of the world; and to this day sacrifices of a less dreadful character than that of human beings continue to be offered to the water-spirits of Austria and Germany (Th. Vernaleken, *Mythen u. Bräuche des Volkes in Oesterreich*, 1859, p. 168; A. D. Wuttke, *Deutscher Volksaberglaube*[3], 1900, § 429).

(*b*) *The 'bridge-sacrifice' a part of the wide-spread belief in the necessity of a 'foundation-sacrifice' for all structures.*—This placating of the river-spirit is thus in strict harmony with the almost universal belief in the necessity of a sacrifice as a rite preliminary to the erection of all buildings. Thus the Picts are said to have bathed their pre-historic foundation-stones with human blood to propitiate the spirit of the soil (Forbes Leslie, *Early Races of Scotland*, i. 149). Mackinnon (*Culture in Early Scotland*, p. 53) asserts that 'even after the humanizing doctrines of Jesus had become the popular creed, the power of this grim rite occasionally asserted itself in the practice of slaying or burying a victim, before or during the erection of a building, in the belief that only thus could it be made secure' (see also Gaidoz, *Mélusine*, iv. 16). A Thuringian legend is extant that, to make the castle of Liebenstein secure and impregnable, a child was bought from its mother for hard cash, and walled into the foundations. The wall of Copenhagen sank during its erection as fast as it was built. The workmen took an innocent little girl, set her on a chair at a table with toys and eatables, and then twelve master-

masons closed a vault over her. The wall thereupon was completed and stood firm (Tylor, *Primitive Culture*[2], i. 104 f.). There is a Servian legend that three brothers combined to build the fortress of Scutari, but were baffled by the demons, who razed by night what it had taken 300 masons to erect by day. At last the fiends were appeased by the immolation of the wife of the youngest of the three, who happened to be the first to come with food for the workmen (*ib.*). When Vortigern was erecting a strong fort in Snowdon, what the workmen built in one day was always swallowed up in earth the next night. The king consulted Merlin, who advised that the stones and mortar should be sprinkled with the blood of a child born of a mother without a father (Nennius, *Mon. Hist. Brit.* p. 67; also Selden's note to Drayton's *Polyolbion*, p. 158). In Adamnan's *Life of St. Columba* (Reeve's tr. 1857, p. 203) there is the following naive yet significant statement:

'Columkille said then to his people, "It would be well for us that our roots should pass into the earth here." And he said to them, "It is permitted to you that some of you go under the earth of this island to consecrate it." Odhran arose quickly, and then spake. "If you accept me," he said, "I am ready for that." "O Odhran," said Columkille, "you shall receive the reward of this: no request shall be granted to any one at my tomb unless he first ask of thee." Odhran then went to heaven. He (Columkille) then founded the church of Hy.'

Thus the spirits of the soil of Iona were propitiated, whereas till then they had overthrown by night what had been erected by day (see Scott's *Minstrelsy of the Scott. Border*, note to the 'Court of Keeldar' and 'Glenfinlas'; Innes, *Eccles. Hist.*; Pennant, *Voyage to Scotland*, i. 286 ff.; Joyce, *Social History of Ancient Ireland*, i. 284 ff.).

Human skeletons have been found under foundations of the round towers in Ireland (*FLJ* i. 23). A Highland tradition relates that, when the workmen had assembled to lay the foundation of Tighan-Torr, in Western Ross-shire, they caught the first person who chanced to pass, and buried him under the foundation-stone. At the laying of the foundation of Redcastle, a red-haired girl was buried alive under the stone (Haddon, *The Study of Man*, 1898, p. 354; see also MacBain, *Celtic Mythology and Religion*, pp. 45, 46; Stokes, *Revue Celtique*, ii. 200, 201; Windisch, *Irish Grammar*, p. 139). Fitzstephen, in his account of London in the 12th cent., mentions that, when the Tower was built, the mortar was tempered with the blood of beasts (A. B. Gomme, *Tradit. Games*, p. 346 f.). Formerly in Siam, when a new city gate was being erected, it was customary for a number of officers to lie in wait and seize the first four or eight persons who happened to pass by. These were then buried alive under the gate-posts to serve as guardian-angels. The *Ceylon Observer* of Jan. 27th, 1887, had a paragraph in which it was stated that the schools in Colombo were empty, many children were missing, and parents were afraid to let their offspring venture out of doors, because the report had got abroad that 350 boys under the age of 12 were required as sacrifices to propitiate the deity who was responsible for the crack in the great Maligakanda reservoir (*FLJ* v. 260). For further illustrations of this 'foundation-sacrifice' idea see Gerard, *The Land beyond the Forest* (Transylvania), ii. 17; H. Clay Trumbull, *The Threshold Covenant*, p. 47; Macalister in *PEFSt*, 1904, p. 16, where a plate shows a skeleton of a woman discovered at Gezer as a foundation-sacrifice in a pre-Israelitic Palestine town; Rodd, *Customs and Lore of Modern Greece*, p. 168; *FLR*, vol. iii. pp. 282–283, vol. iv. pp. 124, 186; *FLJ*, vol. i. pp. 23–24, 92; Bowring, *Servian Popular Poetry*, p. 64; Grimm, *Deutsche Mythologie*, pp. 972, 1095; St. John, *Far East*, i. 46. See also art. FOUNDATION.

(*c*) *The primitive heathen 'river-spirit' becomes the 'devil' of Christian times.*—In the Christian centuries the heathen idea of a water-spirit, or genius of the river, gave place to the conception that the devil assumes guardianship over all streams. And yet there was a wide-spread belief that the jurisdiction of the devil extended no further than the middle of a running stream (cf. Burns, *Tam o' Shanter*). He has accordingly a special antipathy to bridges, as was the case with his ancient prototype. Numerous, therefore, are the legends to be found over all Europe attached to so-called 'Devils' Bridges,' narrating how the Evil One would not allow the bridge to be erected until he had received payment of an offering like that of Iphigenia. In Herzegovina the Muslims regard the office of a civil engineer with pious horror, and curse a new bridge when they pass it. It is to them the symbol of the devil's presence, and the token of an unholy compact between the Evil One and the architect (A. J. Evans, *Through Bosnia and Herzegovina*, p. 314). Like his predecessor the river-spirit, the devil, however, was sometimes cheated of his due. Many of the more ancient bridges of Germany and Switzerland have legends attached to them narrating how the hard conditions laid down by the great enemy (whose tale of victims by drowning was cut short by the erection of a bridge) were successfully evaded.

The Montafon bridge in the Tyrol and the bridge at Ratisbon are illustrations. In the case of the latter, the architect was apprenticed to a master who was building the Cathedral. He laid a wager that he would bridge the Danube before his superior laid the cope-stone of the church. After many failures, the apprentice entered into a compact with the devil, who appeared to him in the garb of a friar. The devil undertook to build fifteen arches of the bridge, on the understanding that he would get the first three living creatures that crossed the bridge. The work was completed in time. The wily apprentice sent across the bridge a dog, a cock, and a hen. The devil in wrath tore the animals to pieces and disappeared. A procession of holy monks passed over the bridge and rendered it safe, and in proof of the reality of the story the figures of the three animals are still triumphantly shown, carved upon the bridge (Moncure D. Conway, *op. cit.* vol. i. p. 204; Tylor, *op. cit.* i. 106; for other instances in Germany, see Grimm, *op. cit.* p. 853). Goethe (*Faust*, ii. 4, Hayward's tr.) makes Mephistopheles say:

'My wanderer on faith's crutches hobbles on
Towards the Devil's Bridge and Devil's Stone.'

A French legend of another 'Pont du diable' describes how an apple was thrown along a newly-finished bridge, and a cat allowed to go in chase of it. The devil was again thus cheated. Principal Rhys has kindly favoured the writer with a similar legend from Wales. 'The devil bargains with an old woman who wants the bridge built, to have as his pay the first creature that crosses the bridge, and expects thus to get the old woman herself. But she takes her dog with her, and throws a piece of bread before her. The dog rushes after it over the bridge, and the devil does not score in the end.' Cf. Longfellow (*The Golden Legend*, Canto v.), who describes the Devil's Bridge at Pilatus, near Lucerne:

'And the Devil promised to let it stand,
Under compact and condition
That the first living thing which crossed
Should be surrendered into his hand,
And be beyond redemption lost.
At length the bridge being all completed,
The Abbot, standing at its head,
Threw across it a loaf of bread,
Which a hungry dog sprang after,
And the rocks re-echoed with peals of laughter
To see the Devil thus defeated!'

It is the same idea which appears in the practice of building *empty* coffins into walls in Germany; in the walling of a *lamb* instead of a child under an altar in Denmark to ensure the stability of the church; in the killing of 12 *sheep*, and placing their heads under the foundations of the pillars of a new bridge over the Arcen in Albania (J. G. von Hahn, *Albanesische Studien*, 1854, i. 161); in the sacrifice of a *chicken* in place of a girl as a foundation-sacrifice in Borneo (Haddon, *op. cit.* p. 355). For further illustrations see Garnett, *Women of Turkey*, ii. 286; Alexandri, *Ballades de la Roumanie*, 1855, under 'The Monastery of Argis'; Tylor, *op. cit.* i. 106 f., with references to the custom in Galam in Africa, in Polynesia, in South Asia, in Japan, and in Tenasserim.

It is clear from these myths that the idea of regarding the devil as the actual architect of the bridge is a later development. The early conception that the devil merely allowed the erection of the structure on payment of a solatium passed into the idea that the devil himself was the builder,

and must have his payment accordingly. A still more developed form of the notion of diabolical or infernal power being invoked in the rearing of a bridge is seen in Froissart (*Chron.* i. 391), who tells how, in A.D. 1381, when the Duke of Anjou was besieging a strong castle on the coast of Naples, a necromancer (doubtless with the help of the devil) built a bridge which carried ten soldiers abreast, until one that passed over the bridge 'made the signe of the crosse on hym, then all went to nought, and they that were on the bridge fell into the sea.' A companion tale is told of the rearing and the destruction of the 'Kelpie's Bridge,' or Drochaid-na-Vouha, at the mouth of the Dornoch Firth (see Miss Dempster's 'Folklore of Sutherlandshire' in *FLJ* vi. 172 [1888]), where the exclamation of an admiring countryman, 'God bless the workmen and the work,' caused the infernal labourers to vanish, and the magnificent golden bridge to sink into the waves.

(*d*) *Survival of the idea of sacrifice to the river-spirit in modern children's games.*—One of the most curious survivals of the ancient custom is seen in many modern children's games. The singing game known as 'London Bridge' has many variants in the different localities where it is played, but fundamentally the theme is the same:

'London Bridge is broken down,
London Bridge is broken down,
London Bridge is broken down,
My fair lady.'

Mrs. Gomme, in her *Traditional Games of England, Scotland, and Ireland*, has analyzed this rhyme very thoroughly. She shows that the song describes the difficulty encountered in building the bridge by *ordinary* means, and that it asks many questions how the structure is to be reared. At last the children seize a 'poor prisoner,' to whom they say, 'Off to prison you must go.' The prisoner in the game is actually 'caught,' and 'released' on payment of a forfeit. The game is thus a curious survival of the old-world notion that a bridge could stand secure only by the death of a 'prisoner,' or, if need be, of his substitute. It is thus allied to the *στοιχεῖον* folksongs of the Greek Orient. Prof. Léon Pineau has suggested in regard to another children's game, a very popular French '*ronde*,' which commences:

'Sur le pont de Nantes,
Sur le pont de Nantes
Un bal est affiché . . .'

that this game relates to 'a ritual dance on the occasion of a human sacrifice to the divinities of the water' (quoted in Haddon, *op. cit.* p. 356).

(*e*) *Transference of the dread associations of bridges to the 'Bridge of Judgment' in the under world of spirits.*—So firmly lodged in men's minds was the conviction that the erection of a bridge implied some kind of preliminary transaction with supernatural powers by way of satisfying their animosity, that, in view of the life beyond the grave, similar conceptions were held regarding the river of death. In the lower world of Shades will there not be a bridge to be crossed, a bridge spanning the dark stream of death, nay, it may be, the very mouth of hell itself? The idea became a fixed belief in nations far sundered geographically. The river-spirit, who in the upper world demanded an adequate satisfaction in the event of his stream being crossed by a bridge, was represented in the lower regions sometimes by the devil, sometimes by stern guardian-angels. The primitive conception of human sacrifices as an offering to the river-god developed in later ages into the belief that the devil received as his prize all who could not successfully pass the ordeal of crossing the narrow bridge.

Sale (*Koran*[2], 1825, Prel. Disc. § iv. p. 121) describes how integral a part of Muhammadan theology this is. The Muslims hold that those who are to be admitted into Paradise will take the right hand way, and those who are destined to hell-fire will take the left; but both of them must first pass the bridge (called in Arabic *al-Ṣirāt*) which is laid over the midst of hell, and is finer than a hair, and sharper than the edge of a sword. It seems very difficult to conceive how any one can stand upon it. The bridge, moreover, is beset on each side with briars and hooked thorns, which will, however, be no impediment to the good, who will pass with wonderful ease and swiftness, like lightning on the wind, Muhammad and the Muslims leading the way. The wicked, what with the slipperiness and extreme narrowness of the path, the entangling of the thorns, and the extinction of the light which directed the faithful to Paradise, will soon miss their footing, and fall down headlong into hell, which is gaping beneath them (Pocock, *Specim. Hist. Arab.*, pp. 282–289). Other Muhammadan legends affirm that this awful bridge stretches between the Temple of Jerusalem on the W. and the Mount of Olives on the E., while between lies the Valley of Hell (the Valley of Jehoshaphat). The pious will be upheld, as they cross, by an angel who will hold them by a single lock of the head ('Shasheh'), but the wicked will fall into the Valley el-Jehennam beneath. Although the bridge of *al-Ṣirāt* is not mentioned in the *Qur'ān*, it is much elaborated in later Muhammadan eschatology, where it is described, in addition to the details already given, as in length a journey of 3000 years, 1000 ascending, 1000 level, and 1000 descending, while fire shoots up about it a journey of 40 years. While, as already noted, the righteous pass over it like a flash of lightning, less perfect Muslims take longer periods in proportion to their guilt, some requiring 25,000 years to complete the journey. Yet other sources make the bridge to consist of seven arches, each a journey of 3000 years, and during the passage all but the most righteous suffer agonies from the fire of hell (cf. Wolff, *Muhammedanische Eschatologie*, pp. 109, 114 f., 148 f.; al-Ghazālī, *Perle précieuse*, ed. and tr. Gautier, pp. 43, 69–70, 72–73; Rühling, *Beiträge zur Eschatologie des Islam*, pp. 27, 58, 63).

The Muhammadan bridge of al-Ṣirāt was borrowed from the Parsi *Chinvatperetu*, or 'Bridge of the Decider,' mentioned repeatedly both in the Avesta and in Pahlavi literature (Bartholomae, *Altiran. Wörterbuch*, col. 596 f.; Gray, *Muséon*, new series, iii. 160 f., 163–165; Modi, *JRASBo* xxi. 49–65; Scherman, *Materialien zur Geschichte der indischen Visionslitteratur*, p. 105 f.; Söderblom, *Vie future d'après le mazdéisme*, pp. 92–96). This bridge, which stretches from the 'Peak of Judgment' (*Chakāṭ-ī Dāitīh*), in Airān-Vēj, to Alburz, is described as follows (*Dāṭistān-ī Dēnīg*, xxi. 1–7): 'As it were, that bridge is like a beam of many sides, of whose edges there are some which are broad, and there are some which are thin and sharp; its broad edges are so large that its width is twenty-seven reeds, and its sharp sides are so contracted that in thinness it is just like the edge of a razor. And when the souls of the righteous and wicked arrive, it turns to that side which is suitable to their necessities, through the great glory of the creator and the command of him who takes the just account.' The Parsi concept of the 'Bridge of the Decider' has also been borrowed not only in Mandaism (Brandt, *Mandäische Religion*, p. 195), but also in the *Yalqut* to Isaiah, § 359 (Kohut, *Jüdische Angelologie und Dämonologie in ihrer Abhängigkeit vom Parsismus*, 1866, p. 70), and perhaps, as Böklen (*Verwandtschaft der jüdisch-christlichen mit der parsischen Eschatologie*, 1902, p. 37 f.) suggests, in 2 Es 7 [illegible].

It is not impossible that the bridge of the dead is found in Indian literature as early as the

Upanisads (Scherman, pp. 117–119), and it is certain that the belief in such a bridge occurs in Chinese Buddhism, and among the Jews of the Caucasus, the Transylvanian Gypsies, the modern Greeks, the Badaga of the Nilgiri Hills, the Solomon Islanders, the Gold Coast Negroes, etc. (*ib.* pp. 99, 102–110), as well as in New Caledonia (cf. above, vol. i. p. 493[a]). The belief thus found in Zoroastrian, Jewish, Muhammadan, and Indian circles, as well as in other parts of the world (see also below), would seem to be a later and modified analogue of that primitive conception of the trial of the soul after death, which is seen in many early religions. We recognize the same underlying features in the Egyptian myth of the weighing of the scales before the bar of Osiris, and in the Greek fable of the judgment of the soul by Minos, Æacus, and Rhadamanthus in the under world. Cf. Dante, *Hell*, Canto v. 4 ff. (Cary's tr.):

> 'There Minos stands,
> Grinning with ghastly feature: he, of all
> Who enter strict examining the crimes,
> Gives sentence, and dismisses them beneath,
> According as he foldeth him around:
> . . . . . in his turn
> Each one to judgment passing, speaks, and hears
> His fate, thence downward to his dwelling hurl'd.'

In Tooke's *Pantheon* (Edin. 1791, p. 242) there is a curious and grotesque plate of the Hades of the Greek imagination, with Charon ferrying his fares across the Styx, Cerberus the three-headed dog guarding the passage, while in the distance there is a *bridge* with three individuals on it, who pass thereby from the flames of hell to the pleasant woods of Elysium. So also in ancient Celtic mythology there was cast over hell a bridge of exceeding narrowness (sometimes a mere cord), which souls were obliged to traverse if they hoped to reach the mansion of light beyond. This was 'The Brig o' Dread, na brader than a thread' (Baring-Gould, *Curious Myths of the Middle Ages*, p. 248; Rhys, Hibbert Lect. on *Celtic Heathendom*, p. 450).

There is a Hindu analogue to this belief in the Indian Baitaranī (*q.v.*), or swift River of Hell, flowing with blood and filth, which can be crossed only by holding a cow's tail. Aynsley (*Indian Antiq.*, May 1886) learned that the Hindus of Chamba, in the Panjāb, have a bridge over which every corpse must pass on its way to the burning *ghât* beside the river. Though there is a safe road by which the procession may travel, the corpse is invariably carried over a perilous causeway, only 18 inches wide, without a protecting balustrade. In the Solomon Islands there is a kindred belief. At Bogotu, in Ysabel, is a little island called Laulau. On the top of the island is a pool of water, Kolapapauro, and hither all departed spirits of men and women must at death repair. Across the pool lies a narrow tree-trunk, and along this bridge all souls must advance. Bolafagina, the Master-Spirit, examines their hands to see if they have the mark cut upon them (a conventional outline of the frigate bird) which admits them to his company. Those who cannot pass the ordeal are hurled from the bridge into the gulf beneath and perish (R. H. Codrington, *The Melanesians*, p. 257). A similar idea is prevalent among the Chinese in Formosa. With them the good pass over a narrow bamboo bridge to a paradise of sensual enjoyment; the wicked fall from the bridge into a bottomless pit of torment (Forlong, *Faiths of Man*, i. 340). One of the beliefs of the New Zealanders is to the effect that at death the soul on its way to Reinga (=Hades) has to pass a river called Wairotane, the keeper of which places a plank for him to go over. Sometimes the guardian spirit will not permit him to cross, but with friendly violence drives him back to the world he has quitted, in order that he may take care of the family he has left behind (Taylor, *New Zealand and its Inhabitants*, p. 103). In another legend of the same race, a tree has its top pulled down by ropes, so that, when released, it rebounds to the sky, and forms a swinging bridge. The soul that is ready for translation mounts the perilous structure, clings to it, and is swung up into heaven (K. M. Clark, *Maori Tales and Legends*, 1896).

The same ideas of a dread river, and a still more dreadful bridge, are to be found in Scandinavian mythology. In the romance of Hermód, the hero rides nine nights and days through dark and deep valleys, and sees nothing till he comes to the river Gjöll (='the sounding one'), when he steps on to the Gjallar Bridge, which is plated with shining gold. Its guardian maid, Modgud, who asks him his name, says that the day before five arrays of dead men had passed over the bridge, 'but the bridge sounds not less under thee alone, and thou hast not the colour of dead men; why ridest thou here on the way of Hel,' which 'lies downward and northward?' (du Chaillu, *The Viking Age*, 1889, i. 34; Mallet, *North. Antiq.*, 1859, p. 448). Here, as in Vedic India, we find the belief that this bridge of the dead can be crossed in safety by one who, having given a cow to the poor whilst on earth, will find himself provided with a cow at this dread passage, which will carry his soul in comfort across the gulf. In Friesland, the name given to the Milky Way, which was reckoned the Way of Souls, was the Cowpath ('Kaupat') (see Mannhardt, *Die Götterwelt der Deutschen u. Nordischen Völker*, 1860, p. 51). Hence of yore the funeral custom arose in Sweden, Denmark, Upper and Lower Germany, and England, that a cow should follow the coffin to the graveyard. Till recent times this custom was continued on the Continent, being accounted for on the ground that the cow was a gift to the priest for saying masses for the dead man's soul, or for preaching his funeral sermon (Kelly, *Curiosities of Indo-Europ. Tradition and Folklore*, 1863, p. 320). In England, when pagan sacrifices had been abolished, the cow was similarly devoted to pious uses, under the name '*saul-sceat*' (=soul-shot), or mortuary payment.

But, having passed Gjallar Bridge, and entered Hel (one of the nine Scandinavian under worlds which stood under Ygdrasil, the mystic ash), there was no way to heaven but by a still more precarious bridge. This was the famous *Bifröst*, or the Bridge of the Asar, connecting earth with Asgard, the home of the gods (Bifröst, from Icelandic *bifa*= tremble, and *rost*=path, the tremulous or aerial bridge, the rainbow; Mallet, *op. cit.* p. 548; Brewer, *Dict. of Phrase and Fable*, p. 133). According to the Eddas (§ 27), by this rainbow bridge from heaven to earth the gods daily descended, passing on horseback over it to sit in judgment in the under world on the souls of men brought before them. The red of the rainbow is the burning fire which keeps back the frost and mountain giants from entering Asgard. But, lest other giants should attempt to scale the heights of heaven by this bridge, at the foot, on Himinsbjörg ('heaven-mountain'), sits Heimdall, the watchman of the gods, with his terrible dog Garm. (Cf. the 'Great Dog' of the North Amer. Ind. legends, and the fact that the baying of a dog is currently held throughout northern lands to be coincident with, or prophetic of, death.) Heimdall needs less sleep than a bird; he can see equally well by night and by day 100 leagues away; he hears the grass growing and the wool on the sheep's back. But there will come a day when all his watchfulness will be in vain. Strong though the bridge be, and 'constructed with more art than any other work,' it will be stormed and destroyed by the sons of Muspell. These giants, led by Surtur (the 'black'), with a sword brighter than flame, will advance against heaven with irresistible might. In vain will Heimdall blow his Gjallar-

horn, the sound of which will be heard throughout all worlds. The wild horde will swarm up Bifröst on horseback, and attempt to break into Asgard. In the awful onslaught the tremulous bridge will break into a thousand pieces, and the end of the world will have come (Mallet, *op. cit.* pp. 95, 408–452; Crichton and Wheaton, *Scandinavia Ancient and Modern*, 1838, i. 91–95).

The conception of the rainbow as a bridge between earth and heaven, over which the gods descend and ascend, is found also among the South Sea Islands (see the adventures of Oro in Ellis, *Polynesian Researches*, 1829, i. 313). Perhaps also the 'Floating Bridge of Heaven' in Japanese legends is derived from the same conception (see W. G. Aston, *Shinto, the Way of the Gods*, 1905, p. 87; and Sir E. J. Reed, *Japan: its History, Traditions, and Religions*, 1880, i. 30).

This notion of a bridge in the unseen world over which the soul at death must pass was imported into mediæval Christianity from paganism, and became an essential part of its stock of beliefs. In *St. Patrick's Purgatory* (Wright's ed. 1844, ch. iii.) it is told how the pilgrim made a tour through hell in person, how he crossed the narrow bridge that spans the river of death, how he turned about on a great wheel of fire, how he passed the devil's mouth over the awful bridge, and thus at last reached Paradise (Tylor, *op. cit.* ii. 55; Baring-Gould, *op. cit.* p. 237). A bridge is likewise a prominent feature in the mediæval Visions of Alberic, St. Paul, Tundale, and Thurcill; and the same idea is met with in the 'Lyke-Wake Dirge' (a dirge which continued to be sung in Yorkshire till A.D. 1624), the funeral chant of the North Country, which tells of the passage over the dreadful bridge of death:

> 'From Whinny-moore when thou may passe,
> Every night and alle;
> To Brig o' Dread thou comes at laste,
> And Christe receive thy saule.
> From Brig o' Death when thou art paste,
> Every night and alle;
> To Purgatory fire thou comes at laste,
> And Christe receive thy saule.'

(J. C. Atkinson, *Glossary of Cleveland Dialect*, p. 595; cf. Scott, *Minstrelsy of the Scottish Border*, ii. 367; Tylor, *op. cit.* i. 495; Kelly, *Indo-European Folklore*, p. 115, who quotes the dirge in full; Becker, *Contribution to the Comparative Study of the Medieval Visions of Heaven and Hell*, pp. 44, 76, 83, 90, 97.)

The conception is found even amongst North American Indians, either as one of their primitive myths or as a distorted belief derived from their early intercourse with Roman Catholic peoples. The Hurons and Iroquois tell of some whose spirits, travelling in dreams, have returned to earth to tell what they have encountered in the world of ghosts—the river of the dead with its snake-bridge, or swinging log, at the far end of the bridge the Great Dog, and in the distance the villages of the dead (Tylor, *op. cit.* ii. 50). Brebeuf, an early Jesuit missionary, tells of the Indian belief in the tree-trunk which bridges the river of death, and how some of the dead, as they cross it, are attacked by the Dog that guards it, and made to fall into the abyss (*ib.* p. 94). Yet the myth underwent the same natural modification as it had experienced in the Old World. The passage of the bridge came to signify the ordeal whereby the good and the evil were sifted. Catlin (*North Amer. Ind.* ii. 127) refers to the Choctaw idea that souls at death travel far westwards to where the long, slippery, barkless, pine-log, stretching from hill to hill, bridges over the deep and dreadful river: the good pass safely to a beauteous Indian Paradise; the wicked fall into the abyss of waters, and go to dwell in a dark, hungry, wretched land (for further American Indian data, see above, vol. i. p. 435; for similar beliefs among the Ojibwas and the Minnetarees of North America, see Tylor, *Early Hist. of Mankind*, p. 360; and on the ideas of the Aztecs and the Euroks of N. California, as well as the Indians of South America, see Brinton, *Myths of the New World*, 1876, pp. 108, 247 ff.).

In presence, therefore, of a belief, wide-spread and deeply rooted in the mediæval mind, that there existed a bridge in the under world over which every soul must pass, it is not surprising that men should have formed the theory that at this bridge there takes place a conflict between the devils on the one hand and the good angels on the other for the possession of each man's soul. This was an integral part of the Parsi faith. When a soul arrives at Chinvat Bridge the gods and the unclean spirits fight for possession of it. If it be one of the righteous, it is defended by other pure souls, and by the dogs that guard the bridge (*Fargard* vii. 52). A curious reminiscence of this is seen in a children's game, which is played all over Europe and America, and is everywhere fundamentally the same. Newell has described it as it is played in America (*Games and Songs of American Children*, New York, 1884, p. 204), and shows how it is a variant of the game described above (p. 852) as 'London Bridge.' Haddon (*op. cit.* p. 357) points out that in Swabia the two keepers of the 'Golden Bridge' are called respectively the 'Devil' and the 'Angel'; in France the game is known as 'Heaven and Hell'; in Italy the name of the sport is 'Open the Gates.' The gates are those of the Inferno and Paradiso. St. Peter is the keeper of the one, St. Paul of the other. 'When the destiny of the last child is decided, the two girls who represent the keepers of the bridge break their arch of lifted hands and move in different directions, followed by their subjects, while the cries and shrieks of the players condemned to the Inferno contrast with the pathetic songs and sweet cadences of those destined to the happiness of Paradise.' He further points out that the game is mentioned by Rabelais (c. A.D. 1533) under the name of the 'Fallen Bridge.' In German versions the keepers are called 'Devil and Angel,' 'King and Emperor,' or 'Sun and Moon.' In this latter form the game has been one of the few kept up by the Germans of Pennsylvania, who call it 'The Bridge of Holland' (*Die holländische Brücke*). An Irish version of it obliges the little girls to dress as angels, while one personates the devil. The bridge, which is actually constructed of sticks and boards, is made to fall repeatedly, and this is ascribed to the devil. At last a victim is caught, and is made to undergo a test whether he will be the devil's captive or not, by being obliged to walk on a straight line drawn on the ground. And thus we find the idea of the necessity of a tribute to the river-spirit in the case of the erection of a bridge—an idea current in the very earliest ages of the world—perpetuated to-day amongst ourselves in the games which our children play.

iii. THE SEMI-SACRED CHARACTER OF THE BRIDGE, SUBSEQUENT TO THE PLACATING OF THE RIVER-SPIRIT.—This is the third stage in the growth of opinion. Once the sacrifice has been offered, and the river-spirit or devil been placated, the bridge itself takes on an air of sanctity. Can it be some kindred idea which lies at the root of the Japanese custom of bridge-divination (*hashi-ura*)? The end-post of a bridge is a *wo-bashira*, *i.e.* a male pillar or phallus, and, as persons pass over the bridge and engage in conversation, stray words overheard from their talk are interpreted by the inquirer, who sits beside the post, as an indication from the gods of what is desired to be learned. The bridge is a place where it is believed 'sacred' influences are felt (see W. G. Aston, *Shinto, the Way of the Gods*, p. 341).

It is probably from this sacrosanctity of bridges that we may find:—

1. **The origin of the name 'pontifex' as the primitive 'priest-engineer.'**—It stands to reason that the appeasing of an offended river-spirit could be accomplished only by one who was cognizant of the right method of propitiating the divinity. The rites must be conducted by him who was most deeply instructed on these profound subjects, in other words, by the priest. He alone could interpret to his fellow-men the demands of the river-god, and he alone could prescribe the proper ritual for appeasing him. But in primitive times not only religious but also almost all technical and scientific knowledge was the exclusive possession of the priestly cult. Public works requiring skill in mathematics, engineering, and mechanical contrivances, were therefore nearly all the product of priestly brains and priestly hands. What more natural, then, than that the name 'pontifex,' 'bridge-builder' (from *pons* and *facio*; see Smith's *Gr. and Rom. Ant.* 939 f.), should arise, suggesting in itself the twin functions of a servant of religion and a civil engineer? This simple explanation of a word round which much mystery has gathered is probably the true one. The priest whose business it was to placate the river-divinity was originally also the architect of the bridge; and in later years, when the two functions were separated, and there came to be civil engineers who were not priests, the name still clung to the original possessor of the word, and hence we have 'pontifex,' 'pontifical,' 'pontiff,' all of priestly significance (cf. Milton for the old connotation of the word:

> 'Now had they brought the work by wondrous art
> *Pontifical*, a ridge of pendent rock
> Over the vexed abyss'
>
> [*Paradise Lost*, x. 312 ff.]).

2. **This furnishes a reason why the Pons Sublicius was always of wood.**—The priestly mind is essentially conservative, and the first form of the bridge was jealously preserved through all succeeding ages. We have every reason to believe that this bridge was the first which spanned the Tiber. It was the erection of this wooden structure by some priest-engineer in pre-historic times (tradition assigns it to the reign of Ancus Martius [Livy, i. 33]), who defied and appeased the river-spirit, which originated the title 'pontifex.' But no sooner was the bridge successfully reared, and Father Tiber placated by some sacrifice, than the structure acquired a semi-sacred character, and was ever afterwards regarded as holy (see Dionys. ii. 73, iii. 45; Plut. *Numa*, 9; Serv. *ad Virg. Æn.* ii. 166). The idea of its holiness was perpetuated through succeeding centuries by the fact that its upkeep and repair were undertaken solely by the College of Pontifices, of whom the head was the Pontifex Maximus; while its sanctity is further attested in that neither bolt nor bar nor nail of iron entered into its construction, which was entirely of oak (see the passages quoted in Jordan's *Topographie der Stadt Rom im Alterthum*, 1885, I. i. 396; Varro, *Ling. Lat.* v. 83; Pliny, *HN* xxxvi. 15; Tac. *Hist.* i. 86; Seneca, *de Vita Beata*, 25). The conservative priestly mind could tolerate no change. 'In the history of man iron is a modern innovation as compared to bronze and still more to wood and stone; therefore, like every innovation, it is offensive to the gods' (so Frazer, *JPh* xiv. [1885] p. 157 note, who adduces many examples of the prejudice and hatred with which iron is regarded by the old deities in countries as far sundered as Scotland and Korea, Cappadocia and Morocco; he refers also to the Hebrew practice, Dt 27[5]). It was therefore a religious notion, traceable to the innate conservatism of the priestly mind, which maintained the practice of allowing no iron to invade the virgin purity of this old wooden bridge.

If this way of accounting for the sacred character of the Pons Sublicius be the correct one, a number of competing theories are ruled out of court. Mommsen supposes that it was owing to the political exigencies of the Roman commonwealth that the bridge was always kept in its primitive wooden condition—that the bridge might be the more easily broken down at the approach of an enemy. Undoubtedly the legend of how Rome was saved by Horatius Cocles keeping back the Etruscan enemy under Lars Porsena, while the Romans hewed down the wooden structure behind him, lends countenance to this view (Livy, ii. 10; a fine bronze medallion of Cocles and the Sublician bridge of the time of Antoninus Pius is figured in Fröhner's *Méd. de l'Empire Rom.* 1878, p. 60). J. H. Middleton (*Ancient Rome in 1888*, 1888, p. 484) and Dennis (*Cities and Cemeteries of Etruria*, i. 14) adopt similar views, the latter asserting that, as the Tiber was the natural rampart of Rome, the Pons Sublicius was kept as a wooden drawbridge until all fear of invasion was removed by the conquest of Etruria and by the downfall of Hannibal. Thereafter, stone bridges were erected, as the principle of the arch had been known for centuries before, and had been applied in the construction of the Cloaca Maxima (see also Marion Crawford, *Ave Roma Immortalis*, i. 6, ii. 127). But this theory fails to account for the perpetuation of the practice of retaining the bridge in its primitive wooden form and avoiding the use of iron. It is therefore the religious, rather than the political, reason, to which we are confined, as the true explanation.

3. **Transference of the name 'Pontifex' to the pagan and Christian Emperors and latterly to the Popes.**—With the passing of the Republic into the Empire, the office of Pontifex Maximus was conferred on Augustus (13 B.C.) by the vote of the Senate; and thus the supreme sanction of religion lay in the grasp of him who wielded the Imperial sword. It was held that under no circumstances could there be more than one Pontifex Maximus, and this rule was never violated until Pupienus Maximus and Balbinus were named joint-Emperors by the Senate (A.D. 238). The rule having been broken, it was never afterwards observed. Frequently the junior colleague of an Emperor was styled Pontifex Maximus equally with his senior, and the legend occurs on their medals and coins. When Christianity became the official religion of the Roman State, the Christian Emperors carried over the title into their adopted religion. Seven Christian Emperors assumed the name, ensigns, and prerogatives of Sovereign Pontiff, until finally Gratian refused to wear the Pontifical robe (see Gibbon, ii. 394 [Bury's ed.], and note on the testimony of Zosimus).

The next step was the transference of the title to him who claimed to be spiritual head of the Christian Church, though the exact date at which the name was first applied to the Bishop of Rome cannot now be traced. (There is a very doubtful affirmation in Tuker and Malleson, *Handbook to Christian and Eccles. Rome*, iv. 334, that the title was first given to Pope Leo I. [A.D. 440-461].) The first prominent application of the title is from the pen of Tertullian (*de Pudicitia*, c. i.) in an ironical sentence addressed to the Roman Pontiff: 'Audio etiam edictum esse propositum, et quidem peremptorium. Pontifex scilicet Maximus, quod est episcopus episcoporum, edicit.' The correspondence of Cyprian shows no trace of the recognition by the African Church of the exclusive right of the Bishop of Rome to the title. Indeed, in a petition to Boniface, Bishop of Carthage, A.D. 525, the monks there address him as 'Christi venerandus Pontifex' (*Thomassin*, ed. Bourassé, ii. 366). Similarly Hilary of Arles was styled 'summus Pontifex' by Eucherius, Bishop of Lyons (Migne, *Patr. Lat.* l. 773). The term is first applied directly to a bishop of Rome, when Anastasius, on the ordination of Pelagius I. to that dignity, wrote (A.D. 555): 'et ordinaverunt eum pontificem' (Migne, *op. cit.* cxxviii. 611). There is abundant evidence (adduced in Smith's *Dict. Christ. Ant.* ii. art. 'Pontifex') to show that in all the succeeding centuries down to the 11th, many prelates in different countries of Europe

were styled 'Pontifex,' and that 'Maximus' was added where the see was more important and distinguished. But gradually, with the growth of the Papacy in power and worldliness, the title was centred in the Pope; and from the 11th cent. to the present day the name which was originated, perhaps by Ancus Martius in the early ages of the world's history, to designate the engineer-theologian who bridged the Tiber and placated the offended river-spirit, has been limited to the Pontiff who to-day sits in the Vatican, and overlooks the spot where the Pons Sublicius once stood.

4. The Church assuming control of bridges.—Bridges finally became sacred objects. The Church took bridges into her sacred keeping, and they became surrounded with many religious associations. The German Emperors of the Holy Roman Empire had to reiterate thrice a royal oath to maintain the liberties of Rome, 'at *the bridge*, the gate, and on the stairs of the Vatican' (Gibbon, vii. 211 [Bury's ed.]; Gregorovius, *Geschichte der Stadt Rom im Mittelalter* [Eng. tr.], iv. 59). Bridge-building became a part of religion, a pious and meritorious work before God. In 1189 a regular Order of Hospitallers was founded in Southern France, under Pope Clement III., by St. Benezet, under the name of the 'Bridge-Builders' (*Frères Pontifes, Fratres Pontifices*). The object of the Order was the building of hospices and bridges at points where pilgrims crossed the large rivers, and for the ferrying of pilgrims over the streams. A hospital of this Order at Avignon at an early period built the celebrated bridge of which four arches still survive. As a badge they wore a pick upon their breast. Their constitution was modelled upon that of the Knights of St. John; and as the association gradually dissolved in the 13th cent., most of their number found their way into that Order (Kurtz, *Church Hist.* [Eng. tr.] ii. 76; Grégoire, *Recherches historiques sur les congrégations hospitalières des frères pontifes*, Paris, 1818).

To leave money to build a bridge came to be reckoned an act of great piety. In many cases the funds bequeathed were administered by priest-engineers, whose names have been permanently associated with the structures which they erected (cf. the origin of London Bridge built by the priests of St. Mary Overie from money dedicated by the daughter of a ferryman [Allen, *Hist. and Ant. of London*, ii. 454 ff.]). Sometimes, however, the bridges of the Middle Ages were erected from the sale of indulgences. Hutchinson (*Hist. of Cumberland*, i. 283) records: 'In the year 1360 a bridge at Great Salkeld was taken away by floods; for the repairing and re-edifying of which Bishop Welton published an indulgence of 40 days.' The Bishop of Durham (1311–1316) was fond of this practice, as the registry of his episcopal chancery shows. There are frequent entries such as the following: 'His lordship grants 40 days' indulgence to all who will draw from the treasure that God has given them valuable and charitable aid towards the building and repair of Botyton Bridge' (*Registrum Palatinum Dunelmense*, ed. Hardy, in *Rolls Series*, 1875, i. 615, 641 [quoted in Jusserand, *English Wayfaring Life in the Middle Ages*, p. 41]). Similar cases might be cited from Devonshire and other records (see Walford, 'Bridges, their Hist. and Literary Associations' in *TRHS* [new series], 1884, p. 364). Prof. Hume Brown gives the facts for Scotland (*Scotland in the Time of Queen Mary*, 1904, p. 60).

Most of the bridges erected by priests had a chapel attached, built as part of the structure. Nearly all the early bridges on the Continent and in Britain were adorned with these chapels, *e.g.* that at Wakefield over the Calder in the time of Edward III.; that over the Wye at Monmouth, still extant; that over the Avon at Bath; and the first stone London Bridge erected in 1205, on which the chapel was dedicated to St. Thomas à Becket (see Walford and Jusserand, *opp. citt.*). As a curious perpetuation of the ancient Roman idea that the duty of keeping the bridge intact was a religious obligation resting on the sacerdotal orders, the priests attached to these mediæval chapels were enjoined, as an indispensable part of their office, to keep the bridge in repair (Allen, *London*, ii. 458 note; see also Ritson, *Gammer Gurton's Garland*). Perhaps the most remarkable of all these mediæval chapels is that at Droitwich, in Cheshire, where the high road passes through the chapel, and divides the congregation from the reading-desk and pulpit (Fosbrooke, *Cyc. of Ant.* p. 147; Nash, *Worcestershire*, i. 329). These bridge-chapels were not used exclusively for devotional purposes. The chapel of the old Norman bridge over the Aire at Leeds was utilized till the middle of the 18th cent. as a cloth market, and the traders were summoned to the spot by the ringing of the chapel bell. In 1276 an ordinance of the Common Council of the City of London forbade the holding of a market on London Bridge. But, on the other hand, Philip the Fair of France in 1304 ordained that the Public Exchange of Paris should be held on the Great Bridge there, as it was anciently accustomed to be (see *Gephyrologia* [1751], the basis of Rees' *Cyclopædia*; *of Arts, Sciences, and Lit.* 1819). As a still further development of this sacredness attaching to bridges, the ancient Danes are said to have erected bridges as a pious memorial of their deceased friends. Olaus Wormius in his *Monumentorum Danicorum*, 848 (A.D. 1643), states that two or three persons built a bridge on the island of Foesoe in Denmark, not only to preserve their own names to posterity, but also to commemorate that of Jotheimnt, who had converted them to Christianity. Others have erected bridges to express their gratitude for rescue from drowning.

Thus with the placating of the river-spirit, the defeat of the devil, and the hallowing of their structure by their association with the monastic orders, mediæval bridges eventually became shrines, and with the erection of chapels on them, the process of rehabilitation was complete. The ill-omened structure of antiquity grew into the holy and sacred sanctuary of the Middle Ages, and memories of their religious character have lingered to the present day. Bridges are no longer objects of censure, hated of God and devil alike, but holy spots, across which even material blessings may pass. It is over a golden *bridge* at Bingen that German tradition asserts that the spirit of Charlemagne annually crosses the Rhine, whenever a season of unusual plenty betokens that the vineyards and cornfields of Germany have been supernaturally benefited. Thus Longfellow sings (*Sonnet on Autumn*): 'Thou standest, like Imperial Charlemagne, upon thy Bridge of Gold'; and again (*The Golden Legend*, Canto v.):

'God's blessing on the architects who built
The bridges o'er swift rivers and abysses,
Before impassable to human feet,
No less than on the builders of cathedrals,
Whose massive walls are bridges thrown across
The dark and terrible abyss of Death.
Well has the name of Pontifex been given
Unto the Church's head, as the chief builder
And architect of the invisible bridge
That leads from earth to heaven.'

LITERATURE.—The writer is acquainted with no work which deals with the whole subject. He has to express his indebtedness to Dr. J. G. Frazer for kind references to other literature bearing on certain aspects of the question, besides the excellent note referred to above in his article in *JPh* xiv. [1885]

p. 156. W. Warde Fowler's *Roman Festivals of the Period of the Republic*, 1899, well repays very careful study, though the writer of this article has felt obliged to dissent from his verdict on the ceremonies at the Pons Sublicius. Much valuable information will be found in Mannhardt's *Baumkultus*, 1875; Grimm's *Deutsche Mythologie*[2], 1844; and Tylor's *Primitive Culture*[3], 1891. The literature on 'foundation-sacrifices' is cited in the text. Mrs. Gomme's work on *Traditional Games*, 1894–98, is full of suggestive material, which has been worked over by Haddon, *Study of Man*, 1898. Many references to other literature are given in Scherman, *Materialien zur Geschichte der indischen Visionslitteratur*, Leipzig, 1898, pp. 102–119.

G. A. FRANK KNIGHT.

BRIEFS.—See BULLS AND BRIEFS.

BRINDĀBAN (Skr. *vrindāvana*, 'grove of the sacred basil tree,' *ocymum sanctum*).—A town situated on the right bank of the river Jumnā, in the Mathurā District of the United Provinces, lat. 27° 33′ 20″ N.; long. 77° 42′ 10″ E. The place is held sacred as the scene of many adventures in the life of Kṛishṇa. It has been computed that there are as many as one thousand temples within the limits of the town, of which four are of special interest—those of Govinda Deva and Gopīnātha, dedicated to Kṛishṇa, as a god of cattle and companion of the Gopī milkmaids; Madan Mohan and Jugal Kishor, representing him in his youthful and erotic character. The temple dedicated to Govinda Deva, built about A.D. 1590, is the most impressive building that Hindu religious art has ever produced, at least in Northern India. 'The body of the building,' says Growse (p. 241), 'is in the form of a Greek cross, the nave being 100 ft. in length and the breadth across the transepts the same. The central compartment is surmounted by a dome of singularly graceful proportions; and the four arms of the cross are roofed by a waggon vault of pointed form, not, as is usual in Hindu architecture, composed of overlapping brackets, but constructed of true radiating arches as in our Gothic cathedrals.' The design has suggested to some authorities the influence of the Jesuit missionaries which was considerable in the court of the Emperor Akbar. If this were really the case, 'the temple would be one of the most eclectic buildings in the world, having a Christian ground-plan, a Hindu elevation, and a roof of modified Saracenic character.' But it is most improbable that Jesuit missionaries assisted in planning a Hindu temple, and, as Growse remarks, there are earlier Hindu temples which display a similar design. Fergusson regards this as 'one of the most interesting and elegant temples in India, and the only one, perhaps, from which an European might borrow a few hints.' The temple of Madan Mohan is in a ruinous condition, and the idol has been removed to Karaulī in Rājputāna. That in honour of Jugal Kishor was built in the reign of the Emperor Jahāngīr, about A.D. 1627. Among the modern temples, that erected by the Seth bankers of Mathurā is one of the most remarkable. It follows the Madras style, with the lofty *gopuras*, or gate-towers, characteristic of the great fanes of Southern India. It was built during the years 1845–1851. It contains a *rath*, or processional car, of the god, an enormous wooden tower in several stages, with monstrous effigies in the corners, in which he is taken once a year in procession from his temple to a neighbouring garden, where a pavilion is erected for his reception (Growse, 260 f.). Every event in the life of Kṛishṇa is the occasion of a local festival, of which Growse (*ib.* 267) enumerates forty-six.

LITERATURE.—Growse, *Mathurā, a District Memoir*[3] (1883), ch. viii., where illustrations of the more important sacred buildings will be found. The Govinda Deva temple has been described by Fergusson, *History of Indian and Eastern Architecture* (1899), p. 462 ff.

W. CROOKE.

BROTHERHOOD (Artificial).

[P. J. HAMILTON-GRIERSON.]

1. 'Relationship' in ordinary acceptation means connexion by birth or marriage. Accordingly, it is usual to describe blood-brotherhood, adoption, and the ties formed by sponsorship, fosterage, and the like as 'artificial relationships.' Nor, indeed, is this description open to serious objection, provided that we do not leave two facts out of sight—the fact that, in the process of their evolution, artificial relationships do not always follow the same course as natural relationships, and the fact that what seems artificial to us may, and often does, seem perfectly natural to uncivilized man.

We propose to treat the subject under the following heads:

i. *The ceremony establishing brotherhood.*
 (*a*) *Where blood is employed* (§§ 2–17).
 (*b*) *Where blood is not employed* (§§ 18–29).
ii. *Where the relation is due to force of circumstances* (§§ 30–31).
iii. *The institution among the Southern Slavs* (§§ 32–43).
iv. *The institution in Roman and Byzantine law and in modern Greece* (§ 44).
v. *Where the compact is entered into with women, dead persons, supernatural beings, or animals* (§§ 45–46).
vi. *What persons are bound by the compact* (§§ 47–48).
vii. *What purposes are served by the compact* (§§ 49–50).
viii. *What legal consequences flow from the compact* (§§ 51–52).
ix. *General observations on the nature and history of the institution* (§§ 53–56).

i. The ceremony.—(*a*) *Where blood is employed.*

2. Livingstone (*Missionary Travels and Researches in South Africa*, London, 1857, p. 488) describes the rite as practised by the Balonda and shows us its most usual characteristics. 'The hands of the parties are joined . . .; small incisions are made on the clasped hands, on the pits of the stomach of each, and on the right cheeks and foreheads. A small quantity of blood is taken off from these points in both parties by means of a stalk of grass. The blood from one person is put into one pot of beer, and that of the second into another; each then drinks the other's blood, and they are supposed to become perpetual friends or relations. During the drinking of the beer, some of the party continue beating the ground with short clubs, and utter sentences by way of ratifying the treaty. The men belonging to each then finish the beer. The principals in the performance of "*Kasendi*" are henceforth considered blood-relations, and are bound to disclose to each other any impending evil.' In some cases the parties drink one another's blood undiluted. Thus, among the people of Rubunga, the 'brothers' bent their heads, and sucked the blood from each other's arms (Henry M. Stanley, *Through the Dark Continent*, London, 1878, ii. 286); and a like practice prevails among the Rokka of Flores (A. Bastian, *Indonesien oder d. Inseln d. malayischen Archipel.* pt. iv.: 'Borneo u. Celebes,' Berlin, 1889, p. 65), in Syria (H. C. Trumbull, *The Blood Covenant*, London, 1887, p. 5) and Madagascar (W. Ellis, *History of Madagascar*, London, 1838, i. 187–188), among the Karens of Burma (R. M. Luther *ap.* Trumbull, *op. cit.* p. 313), the Wanyoro (J. A. Grant, *A Walk across Africa*, London, 1864, p. 271), and the people of Comana (Jean sire de Joinville, *Histoire de S. Louys . . . enrichie de nouvelles observations et dissertations historiques . . . par Charles du Fresne, sieur du Cange*, Paris, 1668, p. 94). Baldwin, Count of Flanders, reproached the Greeks with so far accommodating themselves to the manners of the barbarians, with whom they made alliances, as to drink their blood (*ib.* Diss. xxi.); and Tacitus (*Ann.* xii. 47 [Church and Brodribb's tr.]) says of the Iberians and Armenians that it was the custom for their princes, whenever they joined alliance, to unite their right hands and bind the thumbs together in a tight knot; then, when

the blood had flowed into the extremities, they let it escape by a slight puncture and sucked it in turn. Further, Herodotus (i. 74 [Rawlinson's tr.]) tells us that, when they took oath, the Medes and Lydians made a slight flesh wound in their arms from which each sucked a portion of the other's blood. Among some of the Australian tribes 'the drawing and also the drinking of blood on certain special occasions is associated with the idea that those who take part in the ceremony are thereby bound together in friendship and obliged to assist one another' (Spencer and Gillen, *The Northern Tribes of Central Australia*, London, 1904, p. 598; *The Native Tribes of Central Australia*, London, 1899, p. 461). The parties to the rite drink one another's blood, or sprinkle one another with their blood (see below, § 49). So, too, in ancient Ireland, parties to a league are said to have ratified it by drinking each other's blood—a custom derived from the heathen, who were wont to seal their treaties with blood (Giraldus Cambrensis, *Typogr. Hib.* iii. 22).

3. Sometimes the blood of the 'brothers' is mixed with some other liquid—water, wine, beer, or spirits; and of this practice instances are supplied by the natives of Timor (H. O. Forbes, *A Naturalist's Wanderings in the Eastern Archipelago, 1878–1883*, London, 1885, p. 452) and of Bohol (M. de Zuñiga, *An Historical View of the Philippine Islands* [tr. by Maver], London, 1814, i. 67; see also *Relation by Loarca*: 'The Philippine Islands,' ed. by Blair and Robertson, Cleveland, Ohio, 1903, v. 161–163), of Amboina, of Leti, Moa, and Lakor, of the Babar Archipelago, of Wetar, of Ceram, and of Tanembar and Timorlaut (J. G. F. Riedel, *De sluik- en kroesharige Rassen tusschen Selebes en Papua*, The Hague, 1886, pp. 41, 396, 342, 446, 128–129, 284), by the Bali of North Cameroon (Hutter, 'Der Abschluss von Blutverwandtschaft u. Verträgen bei d. Negern d. Graslands in Nordkamerun' in *Globus*, 1889, lxxv. 1), the Balonda (D. Livingstone, *op. cit.* p. 488; H. Wissman, etc., *Im Innern Afrikas*, Leipzig, 1888, p. 151), the Wanyamwesi (J. Kohler, 'Das Banturecht in Ostafrika' in *Zeits. f. vergl. Rechtsw.* xv. 41), the Kimbunda (L. Magyar, *Reisen in Süd-Afrika in d. Jahren 1849 bis 1857*, tr. from the Hungarian by J. Hunfalvy, Budapest and Leipzig, 1859, i. 201–202), the Kayans (S. St. John, *Life in the Forests of the Far East*[2], London, 1863, i. 116), and the Scythians (Herod. iv. 70).

4. The 'brothers' do not always drink each other's blood. Sometimes they sprinkle it over one another (Spencer and Gillen, *Northern Tribes*, pp. 598, 372; see below, § 49). It is smeared by the Karens over their lips (Luther, *op. cit.* p. 313), while the Wachaga wipe it on a piece of flesh, which each of the parties thrusts several times into the mouth of the other (Kohler, *op. cit.* p. 40). A somewhat similar practice is found in Uhehe (J. Thomson, *To the Central African Lakes and Back*, London, 1881, i. 243–244). In Uganda and Bukoba each of the 'brothers' dips a coffee-bean from a pod containing two in his blood, and presents it on the palm of his hand to the other, who must take it up with his lips (J. Roscoe, 'Further Notes on the Manners and Customs of the Baganda' in *JAI*, 1902, xxxii. 68; Kohler, *op. cit.* pp. 40–41). And, among the Kayans of Borneo, the blood of the parties is either mixed with some other liquid and drunk, or is rolled up with a cigarette and inhaled with the smoke (S. St. John, *op. cit.* i. 116).

5. At Mruli, a coffee bean (C. T. Wilson and R. W. Felkin, *Uganda and the Egyptian Soudan*, London, 1882, ii. 41); among the Swahili, a hen's liver (R. Niese, 'Die Personen- u. Familienrecht d. Suaheli' in *Zeits. f. vergl. Rechtsw.* xvi. 240); and among the Wazaramo, Wazeguro, Wasagara (R. F. Burton, *The Lake Regions of Central Africa*, London, 1860, i. 114), and Masai (M. Merker, *Die Masai*, Berlin, 1904, p. 101), a piece of flesh, are eaten, smeared with the 'brother's' blood. Among some of the tribes to the south of the Welle, a piece of sugar-cane, with which the blood of the parties has been wiped off, is chewed and the fibres are blown over the wound. At the same time each 'brother' declares the motives which induce him to enter into the compact, and the obligations which he binds himself to perform, and imprecates evil on the breaker of the bond (W. Junker, *Travels in Africa during the Years 1879–1883*, London, 1891, p. 405; see below, § 56).

6. This last instance introduces us to the performance of the rite by way of inoculation, which in many cases takes the place of blood-drinking. Grant (*op. cit.* p. 108 f.) gives the following description of this form as practised by the Wanyamwesi:

'The process between Bombay and the Sultan's son, Keerenga, may be mentioned. My consent having been given, a mat is spread, and a confidential party or surgeon attends on each. All four squat, as if to have a game at whist; before them are two clean leaves, a little grease, and a spear-head; a cut is made under the ribs of the left side of each party, a drop of blood put on a leaf and exchanged by the surgeons, who rub it with butter twice into the wound with the leaf, which is now torn in pieces and strewn over the "brothers'" heads. A solemn address is made by the older of the attendants, and they conclude the ceremony by rubbing their own sides with butter, shaking hands, and wishing each other success. Ten rounds of ammunition are then fired off, a compliment from each of the four drums is sounded, and they parade the village all the afternoon. . . . An Uganda lad, the magician of the Sultan, made brotherhood with Rehan, the cook, by cutting marks on his chest and rubbing in the fat of lions.'

Similar usages are said to prevail among the Wajiji (Burton, *op. cit.* i. 114), on the Congo, and in other parts of Africa (H. M. Stanley, *The Congo*, London, 1885, i. 385, ii. 24, 29, *Through the Dark Continent*, i. 493; H. Ward, *Ethnographical Notes relating to the Congo Tribes*, 1895; *JAI* xxiv. 291; V. L. Cameron, *Across Africa*, London, 1877, i. 333).

7. In Scandinavia, men made brotherhood by letting their blood flow together in a footprint and mingle where it fell ('The Long Lay of Brunhild, in *Corpus Poeticum Boreale*, G. Vigfusson and F. York Powell, Oxford, 1883, i. 308), or by 'going under the turf,' a ceremony of which an account is given in *The Story of Gisli the Outlaw* (from the Icelandic by G. W. Dasent, Edinburgh, 1896, p. 23). We are told that Gisli and the three men who were to make oath along with him

'cut up a sod of turf in such wise that both its ends were still fast to the earth, and propped it up by a spear, scored with runes, so tall that a man might lay his head on the socket of the spear-head. Under this yoke they were all four to pass. . . . Now they bleed each a vein, and let their blood fall together on the mould whence the turf had been cut up, and all touch it; and all afterwards fell on their knees, and were to take hands, and swear to avenge each the other as though he were his brother, and to call all the gods to witness.'

Several explanations of this curious ceremony have been suggested. In Jacob Grimm's opinion (*Deutsche Rechtsalterthümer*[3], Göttingen, 1881, p. 119), the 'brothers,' by placing themselves underneath the turf and falling on their knees, appear to indicate their abasement before the Higher Powers, and their solemn purification from the world. Konrad Maurer (*Die Bekehrung d. norwegischen Stammes zum Christenthum*, Munich, 1855–1856, ii. 170–171, 229) regards the rite as an ordeal of which the purpose was to secure the performance of the promises made. And this view seems to receive some support from the following passage:

'This was then the ordeal at that time, that men should pass under the earth-collar; that is, a turf was carven out of a field. The ends of the turf shall be fast in the field, and that man who was to undergo the ordeal should pass thereunder. . . . So was he cleansed who went under the earth-collar, if the turf fell not

upon him' (*The Story of the Laxdalers*, done into English by R. Proctor, London, 1903, ch. xviii.).

M. Pappenheim (*Die altdänischen Schutzgilden*, Breslau, 1885, p. 18 ff.), however, points out that this ceremony was used not only in making brothers and in ordeals, but in cases where an offence had been committed and the offender was required to humble himself by going under the turf, as a condition precedent to the acceptance of a composition. He holds that one explanation will not suffice for all three cases, and he explains the use of the ceremony in making brothers—the mixing of the blood with the earth—as symbolical of the common origin of the brothers. They are children of one womb—born of one mother, the earth (see also Vigfusson and Powell, *op. cit.* i. 423).

8. Muir (*Life of Mahomet*, London, 1858, i. p. ccxlvi) tells us that, in a dispute among the Koraish, the men of one party solemnized their compact by dipping their hands in blood, while their opponents dipped their hands in perfume and rubbed them upon the Ka'ba. Robertson Smith (*Kinship and Marriage in Early Arabia*, new ed. London, 1903, pp. 57–59) says that at Mecca in historical times a life and death covenant was solemnized by an oath, each of the parties to which dipped his hands in a pan of blood and tasted its contents; and he expresses the view that these forms are variations of one and the same rite—the rite in which the contracting parties drank or tasted one another's blood. He shows (*op. cit.* p. 59, note 1) that in some instances water or fruit-juice was substituted for blood; and in this connexion it is interesting to notice Herodotus' (iv. 172 [Rawlinson's tr.]) statement regarding the Nasamonians that, 'when they pledge their faith to one another, each gives the other to drink out of his hand; if there be no liquid to be had, they take up dust from the ground, and put their tongues to it' (cf. W. Crooke, 'The Hill Tribes of the Central Indian Hills,' in *JAI* xxviii. 241). It may be that the practice of ratifying an agreement to take part in a common undertaking by shaking hands dipped in blood (Hector Boethius, *Scotorum Historiæ*, Paris, 1526, lib. ii. fol. xviii *b*; cf. § 15 below), and that of drinking human blood, attributed to conspirators at Rome (Sall. *de Conj. Cat.* 22; Plut. *Vit. Publicolæ* iv. [both statements are regarded as unreliable by T. Mommsen, *Römische Forschungen*, Berlin, 1864, i. 332, n. 1]), and in China (Trumbull, *op. cit.* p. 43), are truly adaptations of the primitive institution of 'making brothers' (see below, § 15).

9. With the form of the rite in which the hands are dipped in blood Jacob Grimm (*op. cit.* p. 194) compares the dipping of weapons in blood, mentioned by Herodotus (iv. 70 [Rawlinson's tr.]) in the following passage:

'Oaths among the Scyths are accompanied with the following ceremonies: a large earthen bowl is filled with wine, and the parties to the oath, wounding themselves slightly with a knife or an awl, drop some of their blood into the wine; then they plunge into the mixture a scymitar, some arrows, a battle-axe, and a javelin, all the while repeating prayers; lastly the two contracting parties drink each a draught from the bowl, as do also the chief men among their followers.'

So, too, the Benuas, in making alliances or in taking solemn vows, 'dip their weapons into a mixture of which blood forms the principal ingredient' (T. G. Newbold, *Political and Statistical Account of the British Settlements in the Straits of Malacca*, London, 1839, ii. 395). Lucian (*Toxaris*, 37), in his account of the Scythian form, gives the additional fact that the parties, having dipped the points of their swords in the blood, held them together. It would seem that this touching of swords signified the union of the parties; and this view is corroborated by the curious practice of scraping the spear-shafts and musket-stocks of the 'brothers' on a banana-leaf, and dropping these scrapings, with a pinch of salt and a little dust from a pod, upon the wounds (Stanley, *The Congo*, ii. 24, 89; cf. Hutter, *op. cit.* p. 1 ff. as to the Bali of North Cameroon, and see § 13 below). It seems that scrapings of wood from the stool of a chief add strength to an oath (A. B. Ellis, *The Tshi-speaking Peoples of the Gold Coast of West Africa*, London, 1887, p. 198). A similar explanation appears to apply to the ceremony of sword-biting practised by the Kanowit Dayaks. According to St. John (*op. cit.* i. 55),

'a pig was placed between representatives of two tribes, who, after calling down the vengeance of the spirits on those who broke the treaty, plunged their spears into the animal, and then exchanged weapons. Drawing their knives, they each bit the blade of the others, and so completed the affair.'

So, too, the Garos swear to observe peace by biting each other's sword, and seal the compact by putting food into each other's mouth and pouring beer down each other's throat (E. T. Dalton, *Descriptive Ethnology of Bengal*, London, 1872, p. 62). It is of interest to note in this connexion that the Norman lawyers explained the word 'wapentake' in reference 'to the formal recognition of the local magistrate by touching his arms' (W. Stubbs, *The Constitutional History of England*², Oxford, 1885, i. 96). This ceremony is described in a law of Edward the Confessor (c. 33) as follows:

'Ipse vero erecta lancea sua ab omnibus secundum morem fœdus accipiebat; omnes enim quotquot venissent cum lanceis suis ipsius hastam tangebant et ita confirmabant per contactum armorum, pace palam concessa.'

Du Cange (*Glossarium mediæ et infimæ Latinitatis*, ed. L. Favre, Niort, 1883, *s.v.* 'Arma' [Arma mutare]) understands that it was thus that the subjects of the early kings of England made themselves 'fratres conjurati,' bound to cherish and protect one another and to join in preserving the kingdom from its enemies. G. Tamassia (*L'Affratellamento*, Turin, 1886, p. 32, note 2), however, cites authority to show that what is described is not an *armorum conjunctio*, but a *modus per strepitum concussorum armorum plebiscita condendi* (see Grimm, *op. cit.* p. 770 f.; Tac. *Germ.* xi., *Hist.* v. 15).

10. Sometimes the parties to the compact hold the ends of a forked branch, while one of them cuts it in two, or while a medicine-man draws their blood (Stanley, *The Congo*, ii. 88, 104). It is observed by C. A. L. M. Schwaner (*Borneo, Beschrijving van het Stroomgebied van d. Berito*, Amsterdam, 1853, i. 214–215) that, in the district of Borneo with which he deals, a third party hacks through the branch held by the 'brothers,' and at the same time pronounces imprecations upon the oath-breaker. In view of the whole circumstances, it seems not improbable that the act of holding had a twofold significance. In the first place, it symbolized the union of the parties (it had the same meaning as the contact of swords in the Scythian ceremonial), and, in the second place, it was a ritual act similar to the act of holding an animal while it is being slaughtered for sacrifice. An instance of this sacrificial ceremony is supplied by the Kumi of Chittagong. Among them, the parties to the covenant hold the ropes by which a goat is secured. One of their number stands over it, holding a fighting *dâo*. He takes a mouthful of liquor from a cup and blows it over the parties and the victim. Then he raises his *dâo* and invokes the river-spirit, while he pulls some hairs from the goat and scatters them to the winds. With one stroke the head is severed from the body, and the blood is smeared on the foreheads and feet of the 'brothers' (T. H. Lewin, *Wild Races of South-Eastern India*, London, 1870, p. 228). Among the Bali and the Dusuns, and in Shira (see below, §§ 13, 17, 21), the act of holding or touching the victim forms part of the ceremony.

11. Trumbull tells us of a curious Syrian form of the rite. The parties publicly announce their reasons for entering into the compact. These declarations are written down in duplicate; and each 'brother,' having smeared his copy with the other's blood, and having uttered the wish that the deceiver may be deceived by God, wears it suspended from his neck or bound to his arm 'in token of the indissoluble relation' (*op. cit.* p. 5 f.; see below, § 21).

12. Probably Grimm (*op. cit.* p. 194; cf. Livy, i. 32) is justified in referring to the notion of union brought about by an exchange of blood both the 'hasta sanguinea praeusta' of the Romans—the symbol of the declaration of war by a united people—and the 'Fiery Cross' of the Scottish Highlanders—the half-burnt stake dipped in blood which called the clans to arms against a common foe.

13. A group of observances in which the introduction of weapons forms a prominent feature seems to be susceptible of a different interpretation. Forbes (*op. cit.* p. 452) tells us that at Timor the contracting parties slash their arms, and collect the blood in a bamboo, into which *kanipa* (coarse gin) or *laru* (palm-wine) is poured. Having provided themselves with a small fig-tree, they adjourn to some retired spot, taking with them the sword and spear from the *Luli* chamber of their own houses, or from the *Uma-Luli* of their *suku*, if between large companies. Planting there the fig-tree, flanked by the sacred sword and spear, they hang on it a bamboo receptacle, into which—after pledging each other in the mixed blood and gin—the remainder is poured. Then each swears, 'If I be false, and be not a true friend, may my blood issue from my mouth, ears, nose, as it does from the bamboo!', the bottom of the receptacle being pricked at the same moment to allow the blood and gin to escape. The tree remains and grows as a witness to the contract. With this tree of witness Trumbull (*op. cit.* p. 316 ff.) connects—erroneously, we venture to think—the blood-stained 'Fiery Cross' and a similar symbol made use of in Southern Arabia (see A. von Wrede, *Reise in Hadhramaut*, Brunswick, 1870, p. 197 ff.; see above, § 12). It is not uninteresting to note that the planting of a tree, which, at Timor, is an accessory only, is, among the Karens of Burma, in itself constitutive of the bond of brotherhood (Luther, *op. cit.* p. 313). Trumbull (*op. cit.* pp. 266 ff., 316) refers in this connexion to the planting of trees in ancient Israel; but the Israelitish practice seems to be susceptible of an altogether different explanation (see Robertson Smith, *Rel. Sem.*[2], London, 1894, p. 185 ff.). What then was the purpose served by the introduction of weapons? It may be that it was the same as that of planting the tree; and, in support of this view, an instance from Madagascar may be cited. W. Ellis (*Hist. of Madag.* p. 188 ff.), in describing the ceremony of the *fatidrá* (a form of the blood-rite), says that

'to obtain the blood, a slight incision is made in the skin covering the centre of the bosom, significantly called *ambavafo*, "the mouth of the heart" . . . Some gunpowder and a ball are brought, together with a small quantity of ginger, a spear, and two particular kinds of grass. A fowl also is procured; its head is nearly cut off; and it is left in this state to continue bleeding during the ceremony.' The parties then join in pronouncing a long imprecation upon the oath-breaker, in which occur the following invocations: 'Oh the mouth of the heart! Oh the ball! Oh the powder! Oh the ginger! Oh this miserable fowl weltering in its blood!' And then follows the statement: 'If we keep and observe this covenant, let those things bear witness.'

Take again Hutter's (*op. cit.* p. 1 ff.) account of the ceremony among the Bali of North Cameroon:

It seems to consist of two parts—the making of 'brothers' and the making oath to keep the covenant. The parties, holding kola and pepper in their open hands, interchanged promises of mutual friendship and assistance. The kola and pepper were chewed and eaten, and the blood of the 'brothers' was mixed with palm-wine and drunk by each. Then followed the second part of the rite. Bullets were produced, and, while imprecations were being pronounced upon the oath-breaker, a trench was dug. Each 'brother' pricked his arm, and the bullets, some scrapings of redwood, together with several fetish articles, human bones, and two bleeding human ears were thrown into the trench. It was filled up and a flat stone was placed upon it. Upon this stone a ram was slaughtered by one of the 'brothers,' while the others held it fast, its blood falling on the stone and trench. Some of the blood was mixed with wine in a calabash into which bullets were dropped; and the contents of the calabash were emptied out on the trench. Then the 'brothers' poured wine on the trench, and, having set a jar containing redwood on the stone, they rubbed one another's arms and breasts with the wood, while words of magic were being said. Lastly, kola and pepper and horns of wine were distributed among the followers and attendants.

The view that the articles thrown into the trench and the stone placed upon it serve as 'witness' of the compact, derives support from the practice of the Chinhwans in making oath. They dig a hole in the ground, place a stone on it, throw earth at one another with loud cries, and cover the stone with earth; and by these acts they signify that, like the stone in the ground, their word or oath remains unalterable (Kisak Tamai, 'Die Erforschung d. Tschinwan-Gebietes auf Formosa durch die Japaner' in *Globus*, 1896, lxx. 93 ff.). A very similar form of oath is found among the Bendowen Dusuns. According to F. Hatton's account (*North Borneo*, London, 1885, p. 201 f., cf. pp. 203, 207), the whole tribe assembled, and, the ground having been cleared for a space of about twelve yards, a hole was dug, a foot in depth, a large water-jar was placed in it, the earth dug out of the hole was thrown into the jar, and the old men called upon their god. A stone was then placed near the jar, and the old men declared by fire, represented by a burning stick, by water, which had been poured into the jar, and by earth, that they would be true to all white men. The divinity was then summoned by shooting an arrow into the air; and the guns of the Europeans were placed upon the jar, out of which each man took a little earth.

14. But weapons are not infrequently introduced into the ceremony for a different purpose; they are 'invoked,' that is to say, 'to punish treachery' (D. M. Smeaton, *The Loyal Karens of Burma*, London, 1887, p. 169). When two villages in Ceram wish to make friendship after a war, the inhabitants of one come into the other bringing gifts, and are entertained with food and drink. While they are eating, a large bowl of liquor is prepared. The elders add some drops of pigs' or chickens' blood; and the chiefs wound each other and let their blood flow into the liquor. The elders stir the potion with a sword, a spear, arrows, and, in later times, with the muzzle of a musket. Then one of them comes forward and imprecates evil upon the oath-breaker, the other feasters show their concurrence by signs, the chiefs of the two parties begin to drink the liquid, and the rest of the company drink after them. On a set day a feast is given in the other village, and the bond is then regarded as inviolable. This solemnity is called *pela* (Riedel, *op. cit.* p. 128 f.). Riedel does not give the terms of the imprecation, nor does he state the purpose for which the weapons are introduced. It is, however, instructive to observe that, in the Ceramese procedure, by way of oath for the discovery of crime, a *parang* and a little arrow-rust are introduced along with other symbols, and that an imprecation is pronounced upon the guilty person to the effect, *inter alia*, that his throat shall be cut with a *parang* and his body pierced with arrows (*ib.* p. 116). Further, in the Tanembar and Timor-Laut Islands, in making brothers, sea-water, palm-wine, and other ingredients, together with a small stone, or tooth, are poured into a bowl and mixed with the blood of the contracting parties. Dudilaa is invoked as witness to the covenant, and evils are imprecated upon the breaker of the bond. He shall be unstable as the sea, weak as a man drunk with palm-wine, and the like. Then the parties drink the liquor, and the stone or tooth is broken in two and preserved as a memorial or 'witness' (*ib.* p. 284). It is thought that these practices throw some light upon the symbolical meaning of weapons in the *pela* ceremony (see also Riedel, *op. cit.* p. 396, as to brother-making at Leti), and that a similar explanation applies to the two instances which

follow. Among the Wazaramo, Wazeguro, and Wasagara, the candidates for brotherhood seat themselves opposite to one another, their bows and arrows being placed across their thighs, 'whilst a third person waving a sword over their heads vociferates curses against any that may break the brotherhood' (Burton, *op. cit.* i. 114); and to the westward of Lake Tanganyika, after the transfusion of blood by inoculation had been completed, one of the proxies held a sword resting on his shoulder, while the other went through the motions of sharpening a knife upon it, both joining in pronouncing imprecations upon the oath-breaker (Cameron, *op. cit.* i. 333). A somewhat similar act formed part of the ritual among the Wakikuju, and was followed by imprecations (v. Höhnel, *Zum Rudolph-See und Stephanie-See*, Vienna, 1891, p. 341 f.; A. Arkell-Hardwick, *An Ivory Trader in North Kenia*, London, 1903, p. 147).

15. It is, of course, plain, from some of the examples of the ceremony with which we have been dealing, that the blood employed is not always that of the contracting parties (see C. Hose and W. McDougall, 'The Relations between Men and Animals in Sarawak,' in *JAI*, 1901, xxxi. 209; cf. p. 185). In very many cases it is that of their proxies (Livingstone, *op. cit.* p. 488; J. Thomson, *Through Masai Land*, new ed. London, 1887, p. 88; Cameron, *op. cit.* i. 333; Stanley, *Through the Dark Continent*, ii. 146, 332). Sometimes the 'brothers' shake hands, after having dipped them in the blood of a slaughtered animal (J. M. Schuver, *Reisen im oberen Nilgebiet*, Ergänzungsheft, No. 72, to *Peterm. Mitth.* p. 50), or they are marked with its blood—the blood of a pig among the Kiniahs (St. John, *op. cit.* i. 117, 75), of a goat among the Kumi of Chittagong (Lewin, *op. cit.* p. 228), of a goat or a heifer among the Shendoos (*ib.* pp. 315, 322). Sometimes they smear their lips with blood drawn from a bullock's ear (*Le Tcheou-Li, ou Rites des Tcheou*, tr. from the Chinese by E. Biot, Paris, 1851, i. 126, ii. 247 f.). Or the blood may be that of a human victim, either stupefied with drink, as among the wild tribes of Mexico (H. H. Bancroft, *The Native Races of the Pacific States of N. America*, London, 1875, i. 636, 637; see below, § 48), or slain, as among the Danoms of Borneo (Schwaner, *op. cit.* ii. 77).

16. Some of these ceremonies are plainly sacrificial, and recall to us Herodotus' account of the formation of blood-brotherhood among the Arabs (iii. 8 [Rawlinson's tr.]). He tells us that,

'when two men would swear a friendship, they stand on each side of a third: he with a sharp stone makes a cut on the inside of the hand of each near the middle finger, and, taking a piece from their dress, dips it in the blood of each, and moistens therewith seven stones lying in the midst, calling the while on Bacchus and Urania.'

Robertson Smith identifies these divinities with Orotal and Alilat (*Rel. Sem.*[2] p. 316), and observes that at Mecca, within historical times,

'the form of the oath was that each party dipped their hands in a pan of blood and tasted the contents. . . . The later Arabs had substituted the blood of a victim for human blood, but they retained a feature which Herodotus had missed, they licked the blood as well as smeared it on the sacred stones. . . . The seven stones in Herodotus are, of course, sacred stones, the Arabic *anṣâb*, Hebrew *maṣṣêbôth*, which, like the sacred stones at the Ka'ba, were originally Bætylia, Bethels or god-boxes.' He adds that the essence of the rite was that the parties 'commingled their blood, at the same time applying the blood to the god or fetish so as to make him a party to the covenant also' (*Kinship*, etc., pp. 57, 59, 60).

17. In some of these sacrificial rites an exchange of garments or weapons or gifts forms a part. Thus St. John (*op. cit.* i. 117), in speaking of the Kayans, says that

'they sometimes vary the ceremony, though the variation may be confined to the Kiniahs, who live farther up the river, and are intermarried with the Kayans. There a pig is brought and placed between the two who are to be joined in brotherhood. A chief addresses an invocation to the gods, and marks with a lighted brand the pig's shoulder. The beast is then killed, and, after an exchange of jackets, a sword is thrust into the wound and the two are marked with the blood of the pig.'

So, too, among the Wachaga, an exchange and re-exchange of clothing enter into the rite (Kohler, *Das Banturecht*, p. 40). Among the Kanowit Dayaks, 'a pig was placed between the representatives of the two tribes, who, after calling down the vengeance of the Spirits on those who broke the treaty, plunged their spears into the animal and then exchanged weapons' (St. John, *op. cit.* i. 55). Again, among the Dusuns, an exchange of weapons followed the ceremony, in which, having invoked his god, the chief and the traveller held the head and legs of a fowl, while a third person almost severed its head. The movements of the dying fowl were taken to indicate the intentions of the parties. Lastly, guns were fired and presents were given (Hatton, *op. cit.* p. 195; see below, § 20).

(*b*) *Where blood is not employed.*

18. We shall now proceed to consider the cases in which the use of blood does not enter into the ceremony; and, first of all, we shall deal with instances where the exchange of food forms an essential element in the ritual. Thus, among the Mapuches the compact is made by an exchange of names, one of the parties at the same time presenting a lamb to the other to be eaten by him (E. R. Smith, *The Araucanians*, New York, 1855, pp. 261, 262; see also E. Pöppig, *Reise in Chile, Peru, u. auf die Amazonenströme während d. Jahre 1827–1832*, Leipzig, 1835, i. 384 f., as to the Pehuenches). The Reschiât of Lake Rudolph make 'brothers' with strangers by eating pieces of the liver of a sheep together (A. Donaldson Smith, *Through Unknown African Countries*, London, 1897, p. 297; according to v. Höhnel, *op. cit.* p. 657, 660, they spit upon the sheep and pour milk upon it; see below, § 21); and of the Abors it is said that they 'hold as inviolate any engagement cemented by an interchange of meat as food. This is called *sengmung*. Each party to the engagement must give to the other some animal to be killed and eaten; it is not necessary that they should eat together, or that the feast be held at the same time' (Dalton, *op. cit.* p. 25). The latter part of this statement recalls the account of the Mapuches, given above, and that of the *magus* ceremony among the Khoi-Khoin. The parties to the rite last mentioned must be relatives. A man, for example, may enter into it with his sister's son or daughter. On a day fixed, the nephew sends a ewe or a cow to his uncle's house, where it is slaughtered. The ceremony itself is called *gao nais* ('navel-cutting'). The animal is divided between uncle and nephew, each of whom eats his share apart from the other—generally in his own house. The blood boiled with the kidney-fat forms the ceremonial food (cf. A. W. Howitt, *The Native Tribes of South-east Australia*, London, 1904, p. 751), and of it only the parties and their nearest relatives partake, the rest of the flesh being eaten apart by strangers. After the meal the uncle gives the nephew his hand, promises to be a father to him, and asks him not to injure him in any way. Some days afterwards the uncle gives a feast in return. He slaughters an animal in the house of his sister—the mother of the man with whom he is entering into the *magus*—and afterwards gives him the best of his cows. The covenant draws the ties of relationship more closely together, but does not form a new bond (C. Wandrer, 'Die Khoi-Khoin oder Naman,' in H. S. Steinmetz, *Rechtsverhältnisse von eingeborenen Völkern in Afrika u. Ozeanien*, Berlin, 1903, p. 315 f.). The Beni take the oath of friendship by 'chopping juju.' A kola nut is placed on a brass tray with water poured on it. One of the parties touches himself with the

water and nut and eats part of it. Then the other party eats the remainder of it (R. H. Bacon, *Benin, the City of Blood*, London, 1897, p. 100). Again, among the Karens of Burma, brotherhood is made by eating together, or by planting a tree, or by exchanging blood. Of those methods, the first is said to be of but little binding force, being a mere agreement to abstain from hostilities for a certain time (Luther, *op. cit.* p. 313). The Bauris, Bagdis, and Mahilis admit into their caste men of any caste ranking higher than their own, on the candidate paying a small sum of money to the headman and giving a feast. He must taste a portion of the food left by each of the guests (H. H. Risley, *The Tribes and Castes of Bengal: Ethnographic Glossary*, Calcutta, 1891, ii. 41). Among the Māls, he must give a feast, and drink water into which the headman has dipped his toes (*ib.* p. 49). When a man of the Murmi—a Mongolian caste in Nepāl—desires to make another man his brother, he intimates his feelings; and if these are reciprocated, presents are exchanged. A day is fixed for the ceremony, at which a Brāhman officiates. The men face one another, each with a rupee at his feet. They exchange the rupees, and each daubs the other's face with the mixture of rice and curds used in the marriage rite. The proceedings end with a feast. The tie thus formed is regarded as equivalent to that of actual kinship. 'The adopted brothers may not address or speak of one another by name, nor may they talk to each other's wives, even though these may have taken part in the ceremony. Their descendants, again, are supposed not to intermarry till seven generations have passed' (*ib.* p. 111). A somewhat similar account is given of the Limbus (*ib.* p. 16).

19. With the usages as to eating may be compared what Herodotus (iv. 172 [already quoted]) says of the Nasamonians: 'When they pledge their faith to one another, each gives the other to drink out of his hand; if there be no liquid to be had, they take up dust from the ground, and put their tongues to it.' In making friendship with the Wakikuju, the two parties threw water on their heads and caught and drank it as it fell (v. Höhnel, *op. cit.* p. 315 f.); and it is said of the wild tribes of the Naga Hills that, when peace is concluded between the villages after a war, the chiefs meet face to face on opposite sides of a table raised on the roadside about eight feet from the ground, and approached on either side by a broad ascent, and exchange bamboo mugs of wine (R. G. Woodthorpe, 'Notes on the Wild Tribes inhabiting the so-called Naga Hills,' *JAI* xi. 211).

20. Not infrequently the bond is constituted by an exchange of garments or weapons. Thus, in Tahiti, the natives made friends by taking off a great part of their own clothes and putting them upon the voyagers (J. Cook in J. Hawkesworth, *An Account of Voyages in the Southern Hemisphere*, London, 1773, ii. 251). It is said of the villagers of the Gangotri valley in the country of the Teri Rājā, that with them an exchange of caps is as certain a mark of friendship as an exchange of turbans between two chiefs in the plains (F. Markham, *Shooting in the Himalayas*, London, 1854, p. 108); and a similar statement is made regarding the Khamtis (H. B. Rowney, *The Wild Tribes of India*, London, 1882, pp. 162, 163); while the Masai are said to conclude peace by an exchange of clothing (Merker, *op. cit.* p. 101). Edmund of England entered into an intimate alliance with king Cnut by exchanging clothing and arms (du Cange, *Glossarium, ut cit. supr.*); and, according to the same authority (Diss. xxi. in Jean sire de Joinville (*ut cit. supra*), where many other instances will be found), it was the practice of the Saracens to make friendships by an exchange of arms. The case of Glaucus and Diomede (Hom. *Il.* vi. 235; see Tamassia, *op. cit.* p. 6 ff.) is, of course, familiar. Again, it is said of the Khamtis that 'by an exchange of weapons even the most deadly enemies become fast friends, and if one falls in fight, it is the duty of the other to avenge him' (Rowney, *op. cit.*); and Dalton (*op. cit.* p. 20) gives a like account of the Mishmis.

21. Sometimes the compact is formed by exchanging pieces of a slaughtered animal. Thus the Reschiāt (see Donaldson Smith, *op. cit.* p. 297, referred to above, § 18) hang strips of its paunch on the necks of those with whom they are making friendship (P. Paulitschke, *Ethnographie Nordost-Afrikas, Die materielle Cultur d. Danâkil, Galla, u. Somâl*, Berlin, 1893, pp. 249, 250), while the headman spits and whispers (v. Höhnel, *op. cit.* p. 660). Joseph Thomson gives an interesting account of a somewhat similar practice in Shira:

> 'A goat was brought, and, taking it by one ear, I was required to state where I was going, to declare that I meant no harm, and did not work in *uchawi* (black magic), and, finally, to promise that I would do no harm to the country. The other ear was then taken by the Sultan's ambassador, and he made promise on his part that no harm would be done to us, that food would be given, and all articles stolen returned. The goat was then killed, and a strip of skin cut off the forehead, in which two slits were made.' The Sultan's representative 'taking hold of this, pushed it on my finger by the lower slit five times, finally pushing it over the joint. I had next to take the strip, still keeping it on my own finger, and to do the same for' him 'through the upper slit. This operation finished, the strips had to be cut in two, leaving the respective portions on our fingers' (*op. cit.* p. 88).

The missionary Rebmann, who received this token of friendship from the king of Kilema, calls it 'kishogno' (J. L. Krapf, *Travels in Eastern Africa*, London, 1860, p. 238). Thomson's description of the rite explains what is said of the Wakamba—that the 'brothers' exchange rings made of the skin of a sacrificial victim, which they have eaten together (J. M. Hildebrandt, 'Ethnographische Notizen über Wakamba und ihre Nachbaren' in *ZE* x. 386). Further, Trumbull (*op. cit.* p. 66) quotes an Indian authority ('Tod's Travels,' *Journal of the Indian Archipelago*, Singapore, 1851, No. 32) to the effect that among the Rājput races of India women adopt a brother by the gift of a bracelet; and with this custom may be compared the Slavonic practice of tying the 'brothers' together (see below, § 37).

22. Sometimes the ceremony consists in the application of saliva (see above, §§ 18, 21). The Southern Somali spits on his right hand and rubs it on the forehead of his friend to indicate that he is a fellow-tribesman; and among the Oromó, a like ceremony seems to entitle the guest to tribal rights (Paulitschke, *op. cit.* p. 246). In the old days, the Masai spat at the man with whom they swore eternal friendship (S. L. and H. Hinde, *The Last of the Masai*, London, 1901, p. 47); and, among the Dyoor, 'spitting betokens the most affectionate good-will; it was a pledge of attachment, an oath of fidelity; it was to their mind the proper way of giving solemnity to a league of friendship' (G. Schweinfurth, *The Heart of Africa*, tr. by E. E. Frewer, London, 1873, i. 205). A similar practice is said to prevail in Guiana (Lawrence Keymis, *Second Voyage to Guiana in the year 1596*; R. Hakluyt, *The Principal Navigations . . . of the English Nation*[2] . . . London, 1598–1600, iii. 677), and in the Bissagos Archipelago, off Senegambia (E. S. Hartland, *The Legend of Perseus*, London, 1894–1896, ii. 264); and Grimm (*op. cit.* p. 194) observes that the old northern symbol of concluding peace was not blood but saliva (see Hartland, *op. cit.* ii. 258 ff., where many instances in which saliva is employed are collected).

23. A remarkable form of the practice is spoken to by Taplin (in J. D. Wood's *Native Tribes of*

South Australia, Adelaide, 1879, p. 32 ff.). He says in his account of the Narrinyeri that

'there appears to have existed a sort of traffic between the tribes on the Murray and those near the sea, and a curious sort of provision is made for it, the object of which may be the securing of perfectly trustworthy agents to transact the business of the tribes—agents who will not by collusion cheat their employers and enrich themselves. . . . When a man has a child born to him, he preserves its umbilical cord by tying it up in the middle of a bunch of feathers. This is called a kalduke. He then gives this to the father of child or children belonging to another tribe, and those children are thereafter ngia-ngiampe to the child from whom the kalduke was procured, and that child is ngia-ngiampe to them. From that time none of the children of the man to whom the kalduke was given may speak to their ngia-ngiampe or even touch or go near him; neither must he speak to them.'

We learn from the same authority (Taplin, in E. M. Curr, *The Australian Race*, London, 1886, ii. 254) that, 'if one ngia-ngiampe sees another in need of anything, he or she must send a supply of it if possible; but yet there must never be any direct personal intercourse between the two.' Sometimes the relation is entered into for a time only by dividing the kalduke and giving a part to each. When these parts are returned to the original owner, the relation ceases (Taplin, in J. D. Woods, *op. cit.* p. 33).

24. Many instances may be cited in which the compact is made by an exchange of names. This is the form observed by the Mapuches, one of the parties to the exchange at the same time presenting a lamb to the other, to be eaten by him.

'The giving of a name establishes between the namesakes a species of relationship which is considered almost as sacred as that of blood, and obliges them to render to each other certain services and that consideration which naturally belongs to relatives' (E. R. Smith, *op. cit.* p. 262; see also Pöppig, *op. cit.* i. 384 f. as to the Pehuenches).

At Shupanga, on the Zambesi, the exchange of names with men of other tribes is not uncommon. The parties to the transaction regard themselves as close comrades, owing special duties to each other ever after; and each is entitled, if he visits the other, to food, lodging, and other friendly offices (D. and C. Livingstone, *Narrative of an Expedition to the Zambesi and its Tributaries, 1858-1864*, London, 1865, p. 149). In Ugogo names are exchanged as a pledge of friendship (C. T. Wilson and R. W. Felkin, *op. cit.* i. 60), and the practice is common in Polynesia (Hawaii [J. Cook and King, *A Voyage of Discovery to the Pacific Ocean in the years of 1777-1780*, London, 1784, iii. 17], Huahine [J. Cook, in Hawkesworth, *op. cit.* ii. 251]). It is said to be in use in the Marshall Islands (C. E. Meinicke, *Die Inseln d. stillen Oceans*, Leipzig, 1875-1876, ii. 342; A. von Chamisso, in O. von Kotzebue, *A Voyage of Discovery into the Southern Sea and Beering's Straits*, London, 1821, iii. p. 172, affirms that the friend is obliged to give his wife to his friend, but is not bound to avenge him); and it is found in the islands of Torres Straits (see *Reports of the Cambridge Anthropological Expedition to Torres Straits*, 1904, v. 125, 131 f.; see also J. B. Jukes, *Narrative of the Surveying Voyage of H.M.S. 'Fly,'* London, 1847, i. 209 f., where it seems that the exchange forms a bar to marriage between one of the parties and the sisters of the other), and among the Caribs (*Histoire naturelle et morale des Iles Antilles de l'Amérique*[2], Rotterdam, 1681, p. 513), the Chopunnish (M. Lewis and W. Clarke, *Travels to the Source of the Missouri River . . . in the years 1804-1806*, new ed., London, 1815, iii. 254), the Spokanes (Bancroft, *op. cit.* i. 285, note), the Shastika Indians (S. Powers, *Tribes of California: Contributions to N. American Ethnology*, Washington, 1877, iii. 247), and the Chugachigmiut of Alaska (N. Porlock, *A Voyage round the World . . . in 1785-1788*, London, 1789, p. 254; J. Meares, *Voyages made in the years 1788 and 1789, from China to the N.W. Coast of America*, London, 1790, p. 365). It was at one time in use on the Lower Murray (G. F. Angas, *Savage Life and Scenes in Australia and New Zealand*, London, 1847, i. 59) and in New Zealand (J. S. Polack, *Manners and Customs of the New Zealanders*, London, 1840, ii. 131). Of the natives at Wide Bay, Queensland, it is said (H. S. Russell, 'Exploring Excursion in Australia' in *JRGS*, 1845, xv. 314) that 'they rub their noses with their finger and mention their name, and you are then expected to follow the example by rubbing your nose and mentioning your name; then rub noses again with names exchanged.' The Kingsmill Islanders make friendship by rubbing noses and exchanging names (C. Wilkes, *Narrative of the U.S. Exploring Expedition during the years 1838-1842*, London, 1845, iv. 51); and de Sainson gives a very similar account of the ceremony at Tonga (J. Dumont d'Urville, *Voyage de la Corvette 'L'Astrolabe': Histoire du Voyage*, Paris, 1830-1833, iv. 349). The Vanikoros exchange names and presents (*ib.* v. 329); and the same usage prevails in some parts of New Guinea (W. W. Gill, *Life in the Southern Isles*, London, 1876, p. 233; J. Chalmers and W. W. Gill, *Work and Adventures in New Guinea, 1877-1885*, London, 1885, pp. 42, 99). As to making 'brothers' with animals by exchange of names, see below, § 46.

25. Among the Yahgans of Cape Horn, artificial ties of friendship are constituted by an exchange of gifts, and by painting the face and body in a distinctive fashion. The friends assume the names of blood-relationship—uncle, brother, cousin, or nephew—and behave themselves as if they were really akin (T. Bridges, 'Mœurs et Coutumes des Fuégiens,' tr. by P. Hyades, *Bulletin de la Soc. d'Anthrop. de Paris*, 1884, ser. iii. vol. vii. p. 182). And this practice is not confined to males; for women, unconnected by blood, often call themselves sisters, and act as such in all the conduct of life (P. Hyades and J. Deniker, *Mission du Cap Horn, 1882-1883*, Paris, 1891, vii. 238). So, too, among the Ovaherero, persons of the same sex are frequently united in a formal association (*omapanga* or *oupanga*). The men have their wives in common, and are entitled to use each other's property in time of need; while married as well as unmarried women join the sisterhood (G. Fritsch, *Die Eingeborenen Süd-Afrikas*, Breslau, 1872, p. 227; G. Viehe, 'Die Ovaherero,' in S. R. Steinmetz, *op. cit.* p. 304; see also J. Kohler, 'Recht d. Herero' in *Zeits. f. vergl. Rechtsw.* xiv. 298-299). An interesting parallel to these female associations is furnished by the Orāons. 'When two girls feel a particular penchant for each other, they swear eternal friendship and exchange necklaces, and the compact is witnessed by common friends. They do not name one another after this ratification of goodwill, but are "my flower" or "my giu" or "my meet to smile" to each other to the end of their lives' (Dalton, *op. cit.* p. 253). A like custom exists among some of the Papuan tribes on the north coast of New Guinea (J. Kohler, 'Recht der Papuas' in *Zeits. f. vergl. Rechtsw.* xiv. p. 366), and in certain districts of the Abruzzi (E. S. Hartland, *op. cit.* ii. 218 f.). As to similar usages among the Southern Slavs see below, § 34.

26. Among the North American Indians, we find many examples of companionships in arms. Thus, of the Kongas and Omahas it is said that 'the young men are generally coupled out as friends; the tie is very permanent, and continues oftentimes through life' (Edwin James, *Account of an Expedition from Pittsburgh to the Rocky Mountains . . . in the years 1819-1820 . . . compiled from the notes of Major Long* . . . London, 1823, i. 117, 235; see also W. J. McGee, 'The Siouan Indians,' in *Fifteenth Annual Report of the Bur*

eau of Ethnology to the . . . Smithsonian Inst. 1893–1894, Washington, 1897, p. 178); the existence of a similar institution has been noted among the Wyandot (*First Annual Report . . . 1879–1880*, Washington, 1881, p. 68), and the Iroquois (P. F. X. de Charlevoix, *Histoire de la Nouvelle France*, Paris, 1744, vi. 14); and J. Adair (*The History of the American Indians*, London, 1775, p. 190) says that the Cherokees 'reckon a friend in the same rank with a brother both with regard to marriage and any other affair of social life.' In Fiji,

'instances of persons devoting themselves specially to arms are not uncommon. The manner in which they do this is singular, and wears the appearance of a marriage contract: and the two men entering into it are spoken of as man and wife, to indicate the closeness of their military union. By this mutual bond the two men pledge themselves to oneness of purpose and effort, to stand by each other in every danger, defending each other to the death, and, if needful, to die together. In the case of one of the parties wishing to become married in the ordinary style to one of the other sex, the former contract is duly declared void' (T. Williams and J. Calvert, *Fiji and the Fijians*, ed. G. S. Rowe[3], London, 1860, i. 45–46).

Further, the custom of joining in companionships for mutual defence prevails among many of the Afghan tribes:

'Individuals enter into engagements to support each other in specific enterprises, or in all cases that may arise. These alliances are called Goondees, and they may include any number of persons. The connexion between two persons in the same Goondee is reckoned stronger than that of blood. They are bound to give up all they have, and even their lives, for each other. A Goondee between two chiefs is not dissolved even by a war between their tribes; they may even join in the battle, but as soon as the contest is over their friendship is renewed. Goondees also take place between tribes' (M. Elphinstone, *An Account of the Kingdom of Caubul* . . . new ed. London, 1839, ii. 4).

With these brothers in arms we may compare the Celtic 'Soldurii' and 'Ambacti,' whom Cæsar (*de Bell. Gall.* iii. 22, vi. 15) mentions.

27. Throughout all Circassia there exist fraternities and extensive associations, the members of which 'are bound mutually to protect each other, and assist in paying the fine of individuals who may commit manslaughter or other crimes.' In travelling, the members enter one another's houses 'as freely as if they were brothers in reality' (J. S. Bell, *Journal of a Residence in Circassia during the years 1837–1839*, London, 1840, i. 84). All the members of a fraternity are regarded as springing from the same stock; and not only they, but their serfs, are precluded from intermarriage (*ib.* p. 347).

28. J. Macgillivray (*Narrative of the Voyage of H.M.S. Rattlesnake*, London, 1852, i. 310) noted at Evans Bay, Cape York, the existence of an association between certain whites and certain natives, by which the latter appeared to be bound to assist the former and care for their safety. The native was said to be the white man's *kotaiga*—the term being derived from the Kowrarega word for 'younger brother.' The Kowrarega is an Australian tribe, altered by contact with the Papuans of the adjacent islands so as to resemble the latter in most of their physical, intellectual, and moral characteristics (Howitt, *op. cit.* pp. 3, 11). We are not told how this relation was entered into, or whether it subsisted between natives, as well as between natives and whites. It may be that it is to be classed not with blood-brotherhood, but rather with those associations for the purpose of mutual assistance in trade of which an example is furnished by the Klaarwater Hottentots in their intercourse with some of the Bechuana tribes (W. J. Burchell, *Travels in the Interior of South Africa*, London, 1824, ii. 555; cf. R. F. Burton, *op. cit.* ii. 55; and J. Chapman, *Travels in the Interior of S. Africa*, London, 1868, i. 97, note).

29. In this connexion a curious belief of the Algonquins may be mentioned. They regarded the mingling of the bones of deceased relatives and friends as constituting a bond of friendship between their descendants (S. de Champlain, *Œuvres*, ed. by C. H. Laverdière, Quebec, 1870, v. 305), and Adair (*op. cit.* pp. 183–184) seems to indicate that the same notion prevailed among the Choctaws. He adds that they reckoned it irreligious to mix the bones of a relative with those of an enemy or even of a stranger (cf. Robertson Smith, *Kinship*, pp. 314, 315).

ii. **Where the relation is due to force of circumstances.**

30. Hitherto we have been considering artificial relations into which the parties enter by choice. We now turn to relations which are brought about by force of circumstances, and not by the volition of the 'brothers.' Livingstone (*Missionary Travels and Researches*, p. 526) tells us that he became blood-relation to a young woman by accident. As he was removing a tumour from her arm, he was spattered with blood from one of the small arteries. 'You were a friend before,' she exclaimed, 'now you are a blood-relation.' Some of the Papuan tribes on the north coast of New Guinea recognize the existence of a friendly bond between those who have been circumcised at the same time, especially between two youths who have occupied the spirit-house together. After the ceremony, they address one another no longer by name, but as 'my man' (J. Kohler, 'Recht d. Papuas' in *Zeits. f. vergl. Rechtsw.* xiv. 366; cf. Brooke, *op. cit.* ii. 224). Again, the rite of circumcision (*boguera*) is observed by the Bechuanas and all the Kāfirs, south of the Zambesi. All the boys between ten and fourteen or fifteen are made the life-companions of one of the sons of the chief. The members of the band (*mopato*) recognize 'a sort of equality and partial communism ever afterwards, and address each other by the title of *molekane*, or 'comrade.' When a fugitive comes to a tribe he is directed to the *mopato* analogous to that to which in his own tribe he belongs and does duty as a member' (Livingstone, *op. cit.* pp. 147–148; see E. Casalis, *Études sur la langue séchuana*, Paris, 1841, p. 70, as to the Basutos). Again, among the Kurnai, all the youths who have been initiated at the same time are brothers, and ever afterwards address each other's wife as 'wife,' and each other's children as 'child.' The tie thus formed is one of great strength, binding together all the contemporaries of the various clans (L. Fison and A. W. Howitt, *Kamilaroi and Kurnai*, Melbourne, etc., 1880, pp. 198–199). With this tie may be compared the relation between lads and those who operate on them in the initiation ceremonies (Spencer-Gillen[a], pp. 248, 260). In some of the islands of Torres Straits, boys who are mates in the initiation ceremony may not marry each other's sisters (*Rep. of Camb. Anthr. Exp. to Torres Straits*, v. 211). It may be noted that at Nukahiva, professional tatuers were bound, under sanction of a tabu, to support those of their fellows who came to be in need (G. H. von Langsdorff, *Voyages and Travels in various parts of the World during the years 1803–1807*, London, 1813, i. 121).

31. Among the Wakamba, the relation of protector and protégé is one of extraordinary intimacy. The fugitive who touches the penis of his enemy becomes thenceforth entitled to his protection and to that of his tribe; and so strong is the bond between them, that the protégé is made free of the house and the wife of his protector (Hildebrandt, *loc. cit.* p. 386 f.). A form of oath in use in ancient Israel (Gn 24[2f.] 47[29]; H. Ewald, *Die Alterthümer d. Volkes Israel*[3], Göttingen, 1866, p. 26) and the Kāfir mode of making a vow (H. Somerset, *Adventures in Caffraria*, London, 1858, p. 180) may be recalled in this connexion, as well as a practice of some Australian tribes in swearing

friendship (G. Grey, *Journals of Two Expeditions of Discovery in North-West and Western Australia*, London, 1841, ii. 342; cf. Spencer-Gillen[b], pp. 556, 560; but see R. Brough Smith, *Aborigines of Victoria*, London, 1878, i. 514). Hildebrandt says further, that if a fugitive can succeed in putting his lips to a woman's breast, he thereby creates an indissoluble bond between himself and her tribe, which is thenceforth bound to protect him (*loc. cit. supra*).

iii. The institution among the Southern Slavs.

32. We now propose to turn to a centre of the institution—to the countries of the Southern Slavs, where it is a living force admitted within the walls of the sanctuary by the recognition of the Christian Church. Here we shall meet with many forms, of which some are familiar and some are novel; and we shall commence with an instance in which blood-drinking plays a part. According to a Bosnian authority quoted by F. S. Krauss (*Sitte und Brauch d. Südslaven*, Vienna, 1885, p. 628), the priest offers up a prayer in which he dwells upon the reciprocal duties of the 'brothers.' He makes them kiss one another, and repeat after him the words of a solemn oath. Then the younger brother scratches his arm so as to draw a few drops of blood, which he mixes with wine. The brothers drink the liquid and the compact is sealed. Krauss doubts the accuracy of this account, but S. Ciszewski (*Künstliche Verwandtschaft bei den Südslaven*, Leipzig, 1897, pp. 60–68) accepts it as reliable, and adduces corroborative evidence from many other quarters. (See § 40 below.)

33. We are told (M. Chopin et A. Ubicini, *Provinces danubiennes et roumaines*, Paris, 1856, i. 197, cited by Ciszewski, *op. cit.* p. 32) of a brotherhood 'per arma,' known to Montenegro and Bulgaria. The two men who wish to enter into the compact go to a church, accompanied by several friends as witnesses. They lay their arms crosswise on the floor, and, after swearing that now they are united in life and death, take them up and exchange them. If one dies, his weapons pass to the survivor.

34. According to Medacović (cited by Ciszewski, *op. cit.* p. 33), the bond in Montenegro is one not of friendship only but of relationship—the parties to it are looked upon as actual brothers. He distinguishes three grades, of which the first is called the 'little brotherhood.' It is constituted by a kiss thrice repeated. The 'brothers' exchange gifts; and he who first expressed the wish to perform the rite entertains the other. 'Brothers' of this first degree may determine to form a still more intimate relation, and in such a case the ceremony is one of greater solemnity. They call a priest to say a prayer while they stand under the stola, and, having drunk wine from the chalice to which they set their lips at the same time, they eat a crumb of the bread, receiving the Eucharist in both kinds according to the observance of the Eastern Church. Having kissed the cross, the evangels, and the holy pictures, they kiss one another thrice; and he who proposed the union entertains the other. Presents are exchanged, and the men are brothers until death. So, too, women, married as well as single, enter into similar friendships by drinking wine together, kissing one another, and exchanging gifts. A. Fortis (*Viaggio in Dalmazia*, Venice, 1774, i. 58 ff.) tells us that he was present in the church of Perušić when a union between two young Morlak girls was solemnized on the steps of the altar. He observes that in his day friendships of this sort between persons of different sexes were less common than they had been in the past. According to Krauss (*op. cit.* p. 641), the 'sisters' are always together—in church, at work, and in amusement. They wear similar clothes and ornaments, and address one another as 'little sister,' 'my gold,' 'my little fawn.' No relationship could be more intimate or more affectionate (see § 25 above, where parallel instances are noted).

35. In some parts of Croatia the bond seems to be formed without wine-drinking or witnesses; while, in Northern Bulgaria, the rite exhibits the characteristics of a family gathering, without the intervention of the Church. In some districts the ceremony resembles that of a marriage (Ciszewski, *op. cit.* pp. 35–36).

36. All the old ritual books prescribe the same, or nearly the same, formalities. The parties stand before the altar, the elder on the right, the younger on the left. The priest hands a candle to each. Each lays his right hand on the Gospels, and holds a cross in his left. According to another form, they stand before the altar with crosses and candles in their hands. The priest utters a prayer, in which the importance of the act is emphasized, the reciprocal duties of the brothers are laid down, and God's blessing is invoked upon them. Then the priest exchanges the crosses and candles which the brothers are holding in their hands, and reads to them certain passages of Holy Writ; and the brothers kiss the Gospels and embrace each other. It is only in Bulgaria that the exchange of candles and crosses takes place (*ib.* p. 37).

37. It is customary in one of the districts of Bulgaria for the priest to tie the men together with a small cord which he uses in saying Mass. He then takes off his vestments, and lays them on their heads; and, after having said a prayer suitable to the occasion, he sprinkles them with holy water, and, untying the cord, bids them kiss hands, telling them that they are henceforth brothers in spirit. This ceremony takes place at the end of Divine service, when the church is empty (*ib.* p. 38; see § 21 above, where parallel instances are noted).

38. Among the Bulgarians of Prilep, after the ceremony in church is over, one of the brothers entertains his relatives, with the other brother and his relatives, gifts being distributed among all who are present. A few days afterwards a similar meal is provided in the house of the other brother, and gifts are again distributed. All those who have received these gifts are henceforward regarded as relatives, and may not intermarry; and this kind of union may be contracted by men with men, by men with women, or by women with women (*ib.* p. 39).

39. In Little Russia, brotherhoods and sisterhoods are formed by swearing eternal friendship upon a holy picture, by drinking wine, and by exchanging gifts. In some parts of Russia a meal, to which the whole company is invited, completes the ceremony; and the brothers make it the occasion of an exchange of presents—very often of their baptismal crosses. Their children may not intermarry (*ib.* pp. 54–59).

40. From Servia, Croatia, and Bulgaria we are supplied with notices of ceremonies by which temporary bonds of brotherhood and sisterhood are constituted. These bonds continue from year to year, and form an actual relationship and a bar to intermarriage (*ib.* pp. 41–47). Parallel instances have been observed in Italy and among the Poles and Czechs (*ib.* pp. 48–50). In Servia and Croatia these unions are formed on St. John Baptist's day by the exchange of willow crowns and gifts and kisses. In Southern Bulgaria, on the same holy day, the brothers exchange bunches of twigs, with needles like the pine, in presence of their invited guests, and, having pricked themselves, suck each other's blood in order to show the intimacy of their union. Thenceforward they treat one another as if they were blood-relations. After this exchange of blood they approach the hearth and place their

feet upon it, the guests at the same time beginning the feast. Then the brothers embrace one another, kiss hands, and, exchanging the bunches of twigs, drink out of the same bowl. They give one another presents, and visit their friends and relatives. Upon the corresponding day of the next year the compact is renewed—the elder brother, who on the previous occasion was the younger brother's guest, being now his host (*ib.* p. 44 f., and see § 32 above).

41. In Bulgaria, a bond of brotherhood subsists between children who have been christened in the same water. Brothers or sisters born in the corresponding month in different years, and also twin children, are regarded as so intimately connected that the death of one involves that of the other. A ceremony is therefore necessary to break this connexion, and the person who performs it becomes, in consequence of his act, the brother or sister of the child saved from death. On similar grounds there is said to be a like tie between the person who rescues another from death by drowning, or on the battlefield, and the person rescued; between pilgrims who exchange certain kindly offices; between foster-brothers; and between those who attend upon a bride and bridegroom on the occasion of their marriage (Ciszewski, *op. cit.* pp. 4–22, 101 ff.).

42. Ciszewski (*op. cit.* p. 84 ff.) supplies two instances in which the relation was entered into in obedience to a Divine command; and Krauss (*op. cit.* p. 633) states that, if a man dream that he has made brotherhood with another, he will deem the latter's refusal to form the union as the bitterest of insults. In the ordinary case the dream becomes a reality, and the parties shake hands, kiss one another, and exchange gifts (see below, § 46).

43. Another form of brotherhood mentioned by Ciszewski (*op. cit.* p. 72 ff.) and Krauss (*op. cit.* p. 632) is that made between a man who is in extreme danger and another to whom he appeals for help in the name of God and St. John, at the same time taking him solemnly for his brother. An interesting example of this variety of the relation is given by Krauss (*op. cit.* p. 638). A girl who has to go over the mountains alone may invite the first man she meets to be her brother. He is bound to guard her as if she were his own sister; and, were he to illtreat her, he would be regarded as a criminal against Heaven.

iv. The institution in Roman and Byzantine law and in modern Greece.

44. It is interesting to notice the attitude which the Roman lawgivers assumed towards this institution. A rescript of the emperors Diocletian and Maximian (§ 7 c. *de Hered. Instit.* 6. 24) is in the following terms:

'Nec apud peregrinos fratrem sibi quisquam per adoptionem facere poterat. Cum igitur quod patrem tuum voluisse facere dicis irritum sit, portionem hereditatis, quam is adversus quem supplicas velut adoptatus frater heres institutus tenet, restitui tibi curae habebit praeses provinciae.'

It seems clear that this rescript proceeds upon a confusion of the institution of brotherhood with that of adoption, and that the former, which was completely foreign to Roman ideas, was treated as if it were a monstrous form of the latter and declared to be of no force. The same view received effect in a collection of Syro-Roman laws (*Syrisch-römisches Rechtsbuch*, revised and edited by K. G. Bruns and E. Sachau, Leipzig, 1880), which belongs to the 5th cent. of our era. One of its provisions declares that, if a man wishes to write a compact of brotherhood with another so that they shall hold in common all that they possess or shall acquire, the law forbids it, and annuls the written compact. For their wives are not common, and their children cannot be common. So, too, the Byzantine lawyers of the 11th cent. refused to recognize *ἀδελφοποιΐα*, or *ἀδελφοποίησις*, or *ἀδελφοποιησία* as binding. It was forbidden by the Church, especially to her monks; and the argument against it which found most favour was that of an archbishop of Bulgaria in the 13th century: *ἡ θέσις μιμεῖ τὴν φύσιν, ἡ φύσις δὲ υἱὸν ἐπιγιγνώσκει διὰ γεννήσεως, ἀδελφοποιΐαν δὲ οὐδαμῶς.* Still, the ceremony was practised frequently and in many places; and although the Church forbade it, it was always celebrated with the Church's rites. Like sponsorship, it constituted a *πνευματικὴ ἀδελφότης*, and created a marriage bar between the parties to it, and, according to some authorities, between their children (Bruns and Sachau, *op. cit.* pp. 255–256; Tamassia, *op. cit.* p. 63 ff.; Robertson Smith, *Kinship*, p. 160). It played an important part in the Greek war of independence, and is said even now to survive in certain districts of Greece (J. Kohler, 'Studien über die künstliche Verwandtschaft' in *Zeits. f. vergl. Rechtsw.* v. 438; Ciszewski, *op. cit.* p. 69).

v. Where the compact is entered into with women, dead persons, supernatural beings, or animals.

45. We have seen that the compact is not confined to males. Thus, among the Southern Slavs, men enter into it with women (Krauss, *op. cit.* pp. 619, 624, 638, 640), and women with women (*ib.* p. 641); and female associations are likewise found among the Yahgans, the Orāons, in certain districts of the Abruzzi, among the Papuans on the north coast of New Guinea, the Ovaherero (see above, § 25), and the Swahili (Niese, *op. cit.* p. 240). Nor are these compacts always confined to mortals, if we may rely on the evidence of Bulgarian folk-tales and of the modes of address used by the fishermen of Ragusa to those whom they regard as witches (Ciszewski, *op. cit.* pp. 69–71; cf. Frazer, *Golden Bough*[2], London, 1900, iii. 380, note). In some cases the bond seems to be formed with a dead enemy. Thus, among the sea Dayaks, his head is brought on shore with much ceremony. For months after its arrival

'it is treated with the greatest consideration, and all the names and terms of endearment of which their language is capable are abundantly lavished on it; the most dainty morsels are thrust into its mouth, and it is instructed to hate its former friends, and that, having been adopted into the tribe of its captors, its spirit must be always with them; sirih leaves and betelnuts are given to it,—and, finally, a cigar is frequently placed between its ghastly and pallid lips. None of this disgusting mockery is performed with the intention of ridicule, but all to propitiate the spirit by kindness' (H. Low, *Sarawak*, London, 1848, p. 207).

46. This curious ceremony recalls to us the treatment of the dead bear by some of the Canadian Indians. According to Charlevoix (*op. cit.* v. 173), as soon as he has killed a bear, the hunter puts the mouthpiece of his lighted pipe between its teeth, blows into the bowl, and, having filled the animal's jaws with smoke, adjures its spirit not to resent what has happened nor thwart him in his hunting expeditions. With this account that of the festival of the bear among the Ainus may be compared (I. L. Bird, *Unbeaten Tracks in Japan*, London, 1880, ii. 97–98), and also that of Macrae ('Account of the Kookies or Lunctas' in *Asiatic Researches*, London, 1803, vii. 189) as to the revenge which the tribesmen take on the tiger, and even on the tree by which a relative has met his death (cf. E. B. Tylor, *Primitive Culture*[4], London, 1903, i. 286). In a Malagasy folk-tale we read of a bad man who was blood-brother of certain beasts (*FLJ*, London, 1883, i. 309); and in Sarawak a man sometimes dreams that he has become blood-brother of a crocodile by going through the regular ceremony and exchanging names. Thereafter he is quite safe from crocodiles (C. Hose and W. McDougall, *op. cit.* p. 190 f.; see above, § 42).

vi. What persons are bound by the compact.

47. In some cases the compact is obligatory only

upon those who have personally become parties to it. In Timor and Borneo, and among the Wachaga, a chief may represent his tribe, but a simple tribesman binds himself only (Forbes, *op. cit.* p. 452; Schwaner, *op. cit.* i. 214–215; Kohler, 'Das Banturecht,' *loc. cit.* xv. 40). Nor does the bond reach further in the *fatidrá* of Madagascar, in the old Northern ceremony of 'going under the turf,' in the companionships in arms of the American Indians, the Fijians and the Afghans, in the brotherhoods of the Syrians of the Lebanon (see above, §§ 13, 7, 26, 11) and of the Swahili (Niese, *op. cit.* p. 240), in the friendships of the Polynesians, Yahgans, Orāons, and the natives of the Abruzzi, and the Celts (see §§ 52, 25, 2, 8).

48. In many instances the participants in the rite bind not themselves only, but other persons on behalf of whom they act. Thus, among the Karens of Burma, 'the chief stands as the representative of the tribe, if it be a tribal agreement; or the father as the representative of the family, if it be a more limited covenant' (Luther, *op. cit.* p. 313); and in Timor, the parties may be the representatives of families or tribes or kingdoms (Forbes, *op. cit.* p. 452). Chiefs bind their tribes amongst the wild peoples of the Naga hills (Woodthorpe, *op. cit.* p. 211), the natives of the Bismarck Archipelago (E. Sorge, 'Nissan-Inseln in Bismarck-Archipel.' in Steinmetz, *op. cit.* p. 405), in Borneo (Schwaner, *op. cit.* i. 214), and among the Wachaga (Kohler 'Das Banturecht,' *loc. cit.* xv. 40). Sometimes the chiefs take the principal parts in the ceremony, while their followers join only in its later stages; as, for example, by drinking what remains of the diluted blood, by participating in a common feast, or by receiving gifts from the 'brothers'; so with the Scythians (Herodotus, iv. 70), Balonda (Livingstone, *Missionary Travels and Researches*, p. 488 f.), Ceramese (Riedel, *op. cit.* pp. 128–129), and Bulgarians (see above, § 38). In other cases the tribe is represented by a certain number of tribesmen (Garos and Kanowit Dayaks [see above, § 9], Bali of N. Cameroon [Hutter, *loc. cit.* p. 1]). A very curious instance of the representation of a tribe by a single tribesman is given by Bancroft (*op. cit.* i. 636–637). He says of certain Mexican tribes, that if one of them wished to make 'a close connexion, friendship, alliance, family or blood relationship' with another, its members seized a man of the latter tribe, and, having made him intoxicated, pierced his ears with awls and smeared themselves with his blood.

It is, of course, sufficiently obvious that the blood-brother of a chief may, in the general case, at all events, rely upon the good offices of the subjects of his protector, *e.g.* among the Kimbunda (Magyar, *op. cit.* i. 445). Among the Arabs, 'the compact is primarily between two individuals, but the obligation contracted by the single clansman is binding on all his "friends," *i.e.* on the other members of the kin' (*Rel. Sem.*[2] p. 315; see Herod. iii. 8, quoted above, § 16). By the Southern Slavs each participant is recognized as a near relative by the kinsmen of his chosen brother, the brotherhood being regarded as a true relationship (Krauss, *op. cit.* p. 624; Ciszewski, *op. cit.* pp. 99–101); and, among the Somali and Oromó, a stranger admitted to friendship becomes entitled to all the rights of a tribesman (Paulitschke, *op. cit.* p. 246).

vii. **What purposes are served by the compact.**

49. It is clear from what has already been said that the rights and duties which spring from this relation are not the same in all cases. In some the bond amounts to little more than a formal declaration of mutual goodwill. Thus the friendships between girls among the Orāons and in certain districts of the Abruzzi are strong and intimate, but they create no new tie (see above, § 25). The *magus* ceremony is confined to relatives; it strengthens the natural bond, but does not form a fresh one (see above, § 18); while, among the Swahili, the sole effect of the relation is to establish an obligation between the members to help one another in time of danger (Niese, *op. cit.* p. 240). In other cases the brotherhood seems to effect a complete identification of interests, as, for instance, in the case of the Polynesian *taio* (see below, § 52). It may, however, be affirmed that it is of the essence of the obligation imposed upon the parties to act towards one another faithfully and helpfully as true friends and loyal brothers. Thus we find, among some of the Australian tribes, that

'the drawing and also the drinking of blood on certain special occasions is associated with the idea that those who take part in the ceremony are thereby bound together in friendship and obliged to assist one another. At the same time it renders treachery impossible' (see above, § 2).

The same authorities add that the men taking part in the *atninga* avenging expedition of the Arunta tribe

'assembled together, and, after each one had been touched with the girdle made from the hair of the man whose death they were going out to avenge, they drew blood from their urethras and sprinkled it over one another' (Spencer and Gillen, *The Northern Tribes*, p. 598, cf. p. 556 ff.). 'Sometimes, for the same purpose, blood is drawn from the arm and drunk, and on rare occasions a man, declining thus to pledge himself, will have his mouth forced open and the blood poured into it' (*ib.* p. 598).

Among the Hungarians of the 9th cent. the chief men, in taking the oath of fealty to the chief, signified, by shedding their blood into a single bowl, that the blood of the oath-breaker should be shed as theirs had been (J. G. Schwandtner, *Scriptores rerum Hungaricarum*, Vienna, 1746, i. 6). Again, it is said of the Karens that, when individuals, villages, or clans unite in confederacies,

'the contracting parties bind themselves by drinking spirits in which the blood of both has been mixed, and in which a number of weapons have been dipped. The blood of each is supposed to live as an agent or ambassador in the blood of the other, and thus to prevent treachery. The weapons are likewise invoked to prevent treachery' (Smeaton, *op. cit.* pp. 168–169).

The same notion underlies the brotherhood between the king of Unyoro and his servants, especially his cooks (*Emin Pasha in Central Africa*, ed. G. Schweinfurth, Eng. tr., London, 1888, p. 78), the oaths of those making a league or conspiracy, and the *ngia-ngiampe* relation of South Australia (see above, §§ 2, 8, 23). So, too, among the Melangkaps, the object of making brothers by exchange of gifts was to ensure that the Europeans should not cease to be friendly and injure the natives when at a distance from them (J. Whitehead, *Explor. of M. Kina Bahu, N. Borneo*, London, 1893, p. 123).

50. The members of the companionships of the old Norsemen were bound to avenge one another as if they were truly brothers (see above, § 7), and a like obligation is imposed on those who have entered into brotherhood in Herzegovina, Montenegro, and Bosnia (Ciszewski, *op. cit.* p. 89). Among the Wyandot, the youthful braves 'agree to be perpetual friends to each other, or more than brothers. Each reveals to the other the secrets of his life, and counsels with him on matters of importance, and defends him from wrong and violence, and at his death is chief mourner' (*1 RBEW*, p. 68; see § 26 above, where references to similar statements regarding other tribes will be found). So, too, the Afghan tribesmen who join in 'goondees' for mutual defence and support are regarded as more than natural brothers (see above, § 26); and the Fijian brotherhood in arms wears the appearance of a marriage contract (*ib.*)—a characteristic which may be compared with that of the bond of the 'nazil,' which can be dissolved only by the formula of triple divorce (R. F. Burton, *First Footsteps in East Africa*, London, 1856, p. 124). The parties to the blood-rite among the Balonda become 'perpetual friends and relations' (Livingstone, *Missionary*

Travels and Researches, p. 488); and it has been observed (Wilson and Felkin, *op. cit.* ii. 41; cf. Grant, *op. cit.* p. 271; F. L. James, *The Wild Tribes of the Soudan*[2], p. 91) that, if an African be your blood-brother, you may really trust him. 'This contract is never broken.' Among the Somali and Oromó, the saliva ceremony secures to the stranger a tribesman's rights (Paulitschke, *op. cit.* p. 246), while, among the Karens, the blood-covenant

'is of the utmost force. It covers not merely an agreement of peace or truce, but also a promise of mutual assistance in peace and war. It also conveys to the covenanting parties mutual tribal rights. If they are chiefs, the covenant embraces the entire tribes. If one is a private individual, the immediate family and direct descendants are included in the agreement. I never heard of the blood-covenant being broken. The blood-covenant gives even a foreigner every right which he would have if born a member of the tribe' (Luther, *op. cit.* p. 314).

viii. What legal consequences flow from the compact.

51. In certain cases the relation of brotherhood operates as a bar to marriage. Thus it is said of the Cherokees (see above, § 26) that they 'reckon a friend in the same rank with a brother, both with regard to marriage and any other affair of social life.' So, too, Lery ('Historia navigationis in Bresiliam,' cap. 16, in De Bry, *Americae tertia pars*, Frankfort, 1592) says that among certain Brazilian tribes

'nemo eorum matrem, sororem, vel filiam in uxorem ducit; reliquorum ratio nulla habetur; patruus neptem ducit; atque ita deinceps. Tamen . . . nemo filiam aut sororem sui *Atourassap* matrimonio sibi jungere potest. Is autem *Atourassap* dicitur cujus tanta est cum quodam necessitudo ut bona inter utrumque sint communia.'

In some of the islands of Torres Straits a man may not marry the sister either of his particular friend or of his comrade in the ceremony of initiation (Haddon, *JAI* xix. 411–412, 315, 356); nor may those intermarry who take part in the *pela* ceremony of Ceram, or in the friendly associations of individuals or villages at Wetar (Riedel, *op. cit.* pp. 128–129, 446–447; see above, § 14). Among the Murmi a similar bar subsists between the brothers (see above, § 18); it is said of the Kanakas of the Bismarck Archipelago, that if two chiefs enter into an artificial relationship, their peoples are precluded by the closeness of the connexion from intermarriage (Joachim Graf Pfeil, *Studien u. Beobachtungen aus der Südsee*, Brunswick, 1899, p. 26); and a like prohibition affects those who are *ngia-ngiampe* to one another, and the brothers and even the serfs of a Circassian fraternity (see above, §§ 23, 27). Ciszewski, to whose work reference must be made for details, observes that, among the Southern Slavs, the institution of brotherhood is giving way to the influence of modern ideas; and that, if we were to gather from the different districts the various notions held regarding its legal and social consequences, we should be able to construct a complete scheme of the stages through which it has passed. Thus, in some cases, the relationship does not constitute a bar to marriage; in some, it makes a marriage impossible not only between the parties to the rite, but between their children; while, in Prilep, it precludes marriage not only between the parties and between their children, but between those of their relatives who participated in the distribution of gifts at the time of the ceremony (Ciszewski, *op. cit.* pp. 86, 94, 99–100; see above, § 38). We have in the last case, as Ciszewski observes, an interesting example of a collective brotherhood. The rite is performed by the representatives of the two kindreds; but that the relatives are also included in the association by accepting presents from the principals is shown by the fact that they may not intermarry.

52. According to Forbes, if one of the members of a Timorese brotherhood comes to the other brother's house, he 'is in every respect regarded as free, and as much at home as its owner. Nothing is withheld from him; even his friend's wife is not denied him, and a child born of such a union would be regarded by the husband as *his*' (*op. cit.* p. 452). By the terms of the compact of the *fatidrá* the brothers enjoyed community of wives and property; although, in later times, and in the case of Europeans, those obligations may not have been treated as literally binding (Ellis, *History of Madagascar*, i. 190). So, too, the members of the *omapanga* of the Ovaherero, and, according to A. von Chamisso, 'brothers' in the Marshall Islands have their wives in common (see above, §§ 25, 24); and in the countries of the Kimbunda, and among the Wakamba, the brothers exercised mutual privileges over wives and property (Magyar, *op. cit.* i. 201–202; Hildebrandt, *op. cit.* p. 387). Ellis (*Polynesian Researches*, London, 1831, iii. 124) observes that the wife of every individual is the wife also of his *taio*, or friend; and an earlier authority (W. Wilson, *A Missionary Voyage to the S. Pacific Ocean in 1796–1798, in the ship 'Duff,' commanded by Capt. James Wilson*, London, 1799, p. 359), in making a similar statement, adds that a *taio* 'must indulge in no liberties with the sisters or the daughters, because they are considered as his own sisters, and incest is held in abhorrence by them; nor will any temptation engage them to violate this bond of purity.' Further, it is said, on the testimony of Lieut. Corner, a previous observer, that the relation of *taio* formed between persons of different sexes operated as an absolute bar to all personal liberties. The later missionaries, however, doubted the accuracy of Corner's evidence, at all events in regard to the Tahitians of their time (*ib.* cf. § 43 above). Lastly, the provisions of the Syro-Roman law (see above, § 44) point to a compact, the parties to which held their wives and children in common.

ix. General observations on the nature and history of the institution.

53. We have seen in the preceding pages that the form of the rite by which the bond is constituted is not always one and the same. In some cases the use of blood is the only requisite; in some it is an essential element; in some it is a mere accessory; and in some it does not enter into the ceremony. And the question presents itself—Is the blood-rite the original type of which other forms are variations, or is it itself but one of the forms in which the need of man for union with, and security against, his fellow found expression? It is, no doubt, true that, in many instances, the use of the blood, while it is of the essence of the solemnity, is accompanied or followed by some other ritual act or acts, such as an exchange of food or weapons or garments or other gifts; and it has been argued that a form in which the performance of such act or acts is sufficient without the use of blood for the completion of the rite is a maimed form, which has lost what was originally essential and retained only what was originally of secondary importance. Such an explanation, however, hardly meets the case: for it does not account for those modes of entering into the compact with which the blood-rite is never found in connexion. It suggests, of course, that even in those cases the use of blood at one time formed part of the ceremony; but there is no evidence to that effect. Now, in the instances which we have adduced, we have found that the parties to the compact are brought together in a great number of different ways. They exchange blood or wine or food or names or garments or weapons or rings of the skins of sacrificial victims or gifts of some sort or kind. Or they dip their hands or their weapons in one another's blood or in the blood of the sacrifice, or shake hands smeared with blood, or let the blood mingle as it falls to the ground. Or they join in holding the victim during the sacrifice, or hold branches while an imprecation is being pronounced or blood

is being let. Or one of them rubs the other with his saliva; or a father makes his child *ngia-ngiampe* to another's child. Or, lastly, the union may be due to community of aim and interest, as in the case of companions in arms; or to circumstances beyond the control of the parties, as in the case of those who are initiated together, or associated as operator and patient in the performance of the initiatory rite; or to the pressure of an overwhelming necessity, as in the case of the fugitive and his protector. It is to be observed that it is quite in accordance with primitive ideas to regard 'the nature of anything as inhering in all its parts' (H. Spencer, *Principles of Sociology*, London, 1879, ii. § 346), even when the parts are separated from it (cf. E. Durkheim, 'La Prohibition de l'inceste et ses origines,' *L'année sociologique*, i. 51); and to treat as parts of a man's substance not only his blood, saliva, umbilical cord, sweat, and other *excreta*, hair, nail parings, and the like, but also his garments, weapons, and name. To our thinking, blood is, weapons are not, vitally connected with the man himself; but, to the mind of the savage, the connexion is of the same quality in either case.

As an illustration of this mode of thought, it may not be out of place to indicate here a feature of primitive 'giving' which sharply distinguishes it from its modern counterpart. It is hardly an exaggeration to say generally of uncivilized man what has been said of the Western Eskimo—that 'a free and disinterested gift is wholly unknown to him.' The gift is regarded as an investment, and a return is expected (see P. J. H. Grierson, *The Silent Trade*, Edin., 1903, p. 18). But it seems probable that this conception has its origin elsewhere than in the desire to lose nothing by the transaction. It is rooted rather in the notion that, unless a return be made, the recipient obtains a power over the donor which he may use to the latter's injury. 'Payment,' says Hartland (*op. cit.* ii. 75; cf. Crawley, *op. cit.* pp. 236–245, 256–257), 'is always held to neutralise a witch's power over a person through something received from him'; and instances are not wanting in which savages have refused to touch the articles set out by traders for their acceptance, until the latter have taken what was offered to them (see GIFTS). Accordingly, an exchange of weapons no less than of blood is regarded as an exchange of very substance, and as establishing between the parties 'an actual community of nature' (H. Spencer, *loc. cit.*; see Hartland, *op. cit.* ii. 55–116, 442 and *passim*). This community is brought about not only by an interchange of externals, but by the devotion of the parties to a course of conduct which demands an absolute identity of aims and interests, or by outward circumstances which force them into an intimate contact. In other words, they enter voluntarily or involuntarily into a relation in which each is regarded not by way of metaphor or fiction, but in very truth, as the *alter ego* of the other. Now, it has been said that, according to primitive notions, blood-brotherhood 'is not a relationship personal to the two parties alone, but extends to the whole of each clan: my brother is, or becomes, the brother of all my brethren; the blood which flows in the veins of either party to the blood-covenant flows in the veins of all his kin' (F. B. Jevons, *Introduction to the History of Religion*[2], London, 1902, p. 99; cf. W. R. Smith, p. 315).

We seem, at first sight, at all events, to be in the presence of two conflicting theories. First of all, we have what we may call the 'identity-theory,' which regards the bond as personal to the parties to it, and explains the blood-rite not as the typical form, but as one of many forms; and, secondly, we have what we may call the 'kinship-theory,' which regards the bond as a union of kins, and explains all forms, other than that of the blood-rite, as variations, or modifications, or deteriorations of it (see Hartland, *op. cit.* ii. p. 248 ff.; esp. p. 257). It must be admitted that the evidence which bears upon the claims of those rival views is, in some respects, very imperfect. Not infrequently we are supplied with full details of the ceremonies performed, while we are left wholly in the dark as to the legal incidents of the bond. In other cases, we are told what is its operation, but not a word is said as to the ritual accompanying its formation. For example, we have no facts before us to show how the compact was constituted in the case of the Brazilian *Atourassap*, or in that of the Ovaherero *omapanga* (see above, §§ 51, 25). At the same time, facts are reported which seem to be hardly reconcilable with the 'kinship-theory' as stated. It is, for instance, clear that in many cases the obligations undertaken bind only those persons who are parties to the compact. Thus, the Yahgans of Cape Horn enter into formal friendships by exchanging gifts, by painting themselves in a distinctive fashion, and by assuming one or other of the titles of blood-relationship (see above, § 25). There is no evidence to show that the reciprocal rights and duties of the friends extend to persons other than themselves, or that, by assuming such titles, they mean to do more than emphasize the intimacy of the relation between them. And that this is their meaning is made the more probable by a somewhat analogous instance from Fiji, where comrades in war 'are spoken of as man and wife, to indicate the closeness of their military union.' So, too, the compact which subsists between those who are companions in arms, or who have exchanged names, or who are *ngia-ngiampe* to each other, seems to be strictly personal, even where they are regarded as subject to certain marriage prohibitions, as among the Cherokees, some of the islanders of Torres Straits, the natives of Tahiti, and the Narrinyeri (see §§ 26, 24, 51, 23). The effect of the *lacu*-relationship will be noted below.

In the cases already mentioned, blood is not used in the ceremony; but there are cases in which it is used, and in which only the parties to the bond are affected. We have, for example, the temporary blood-bond, such as that which unites the members of a league, or of an Arunta punitive expedition (see above, § 2). In either instance, its purpose is to prevent treachery; in neither is it productive of a union of kins; and the same observations apply to those who join in 'going under the turf' (see above, § 7). In Timor and Borneo, and among the Wachaga, while a chief may represent his tribe, a simple tribesman binds himself only; and other examples of a like limitation have already been given (see above, § 47). In some of these cases the parties are entitled to share in one another's most sacred rights (see above, § 52); and that these privileges are not necessarily connected with the use of blood in the constitution of the bond, appears from the instance of the Polynesian *taio* and that of the Wakamba fugitive (see above, §§ 52, 31). At the same time it is quite true that sometimes they are found as consequents of a paction solemnized with blood, as in the cases of the Kimbunda and of the natives of Timor and Madagascar (see above, §§ 3, 13, 52). Thus friend is identified with friend; each is entitled to share the other's wife and property; each must regard and treat the other's sisters and daughters as if they were his own. At the same time, the relation is, in its inception at all events, a union of individuals and not a union of kins. The case of the Wakamba is peculiar. The fugitive, by a solemn act, acquires a right of participation in his pro-

tector's wife and house, and a claim on the support and assistance of his protector's tribe (see above, § 31). Here the relation extends beyond the parties to it, and is at the same time accompanied by privileges which are strictly personal to them. It may be thought that this instance presents to us the two theories in combination—the theory that the parties are made one, with the result that they, and they alone, enjoy certain intimate rights; and the theory that they are made kinsmen, with the result that the fugitive can rely upon the assistance of the tribe to which his protector belongs. This view receives some confirmation from a curious mode of peace-making practised by the Masai. One of their women proceeds with her infant to the border of the tribe with whom peace is to be concluded—the Kahe, for example—and meets there a Kahe woman with her infant. The women exchange their children in the presence of witnesses, and each puts the stranger child for a moment to her breast. Then each takes back her child, and each, having been cut by one of the witnesses, smears the blood from her wound on a piece of a bullock's heart and thrusts it into the other's mouth. During these proceedings the Masai representative and the Kahe headman make protestations of mutual goodwill, and imprecate evil upon the breaker of the compact (Merker, *op. cit.* p. 101). Here we have a rite compounded of an adoption ceremony and a brotherhood ceremony; and this instance suggests an explanation of the fact that among the Mapuches, a father, by making a stranger his son's *lacu*, or namesake, adopts him into his family (E. R. Smith, *op. cit.* pp. 260–262; see above, § 24). The parties become relatives by virtue of an exchange of names, and of giving food and eating what is given; and it may be that, in this case, the first of the theories above mentioned has yielded to the second—that the 'kinship-theory' has displaced the 'identity-theory.' Further, it is not without significance that, so far as we know, the blood-rite, as productive of a relationship which extends to the whole clan, is not to be found among the rudest peoples, such as the Yahgans of Cape Horn, the Botocudos, the Andaman Islanders, the Semangs, and Aetas, the Kubus of Sumatra, the Veddas of Ceylon, the dwarf races of Central and Western Africa, the Hottentots and Bushmen, and the natives of Australia, while the use of blood and other *media* is found among some of them in the formation of compacts creative of rights and duties which affect only the persons immediately concerned.

54. Plainly it is matter of no small difficulty to determine what is the relation of these two theories to one another; and, accordingly, we shall content ourselves with an attempt to indicate the direction in which the evidence points. Now, it seems to show that the relation with which we are dealing was not primarily and essentially a relation of kins. We are not concerned to affirm or deny that the tie which held men together in the earliest times known to us was the tie of blood. What we do assert is that primarily and essentially this relation was strictly personal to the parties to it. They might be forced into it by the pressure of external circumstances, or they might enter into it of their own free will. They might be kinsmen, as we count kinship, or they might be strangers in blood. But, whether akin or not, they were somehow brought into a contact so intimate that they became, in the eyes of their fellows, possessed of a common nature. The logical result of this community was that each of the parties became entitled to the rights and subject to the disabilities of the other. Each had a right to share the other's wife and property; each was precluded, wherever marriage of a sister by a brother or of a daughter by a father was prohibited, from marrying the other's sisters or daughters. These marriage bars, even if they did not owe their origin to a recognition of the principle of blood-relationship, were plainly susceptible of being referred to it, and accounted for by it, when it came to be recognized; and this explanation would appear most natural when the use of blood entered into the formation of the bond. Accordingly it would hardly be matter of surprise that, where circumstances favoured the change, the 'kinship-theory' gradually encroached upon the 'identity-theory' and finally usurped its place.

55. What, it may be asked, is the nature of the sanction which supports the compact? It cannot have escaped observation that, in many instances at all events, the institution with which we are dealing closely resembles an oath or an ordeal (see above, § 7). An oath consists in general of two parts—of an asseveration that what is said is true, or that what is undertaken will be performed, and an imprecation of evil by the person taking the oath upon himself, if he prove forsworn. Sometimes a divinity is invoked not merely to bear witness to the oath, but to punish the oath-breaker. Sometimes mere things, such as weapons, are introduced into the ceremony to symbolize the evil which will fall upon the perjured person—he will be cut down with a sword, or pierced with an arrow, or run through with a spear. What Polybius (iii. 25) says of the oath with which the treaties between Rome and Carthage were solemnized is very instructive. The Carthaginians swore by the gods of their country. The Romans swore 'in accordance with ancient custom' and in addition by Mars and Quirinus. He who made oath 'according to ancient custom' took a stone in his hand and said—'If I keep faith, may I fare well; but if I knowingly deceive, then may I, while all other men are assured of their right to their country, their laws, their gods, and their sepulchres, be alone cast out as I now cast out this stone'; and, with these words, he cast the stone away. It seems plain that we have here an account of two forms. In the later form the gods are invoked to be witnesses to the oath, and to punish the oath-breaker. In the earlier form the gods are not invoked, and the stone is thrown away to signify the fate of the false swearer (see H. A. A. Danz, *Der sacrale Schutz*, Jena, 1857, p. 13 ff.; O. Schrader, *Reallexikon d. indogerm. Alterthumskunde*, Strassburg, 1901, p. 168; cf. Grimm, *op. cit.* p. 897; B. W. Leist, *Græco-italische Rechtsgeschichte*, Jena, 1884, pp. 226 f., 703 f.). In many instances an act of touching is an essential part of the ceremony. Thus, in the Indian form, the man who took the oath by touching himself drew down the powers of evil upon his head (Schrader, *op. cit.* p. 167); and, in old Germany, he must touch some object which brought him into relation either with the gods whom he invoked, or with the punishment which followed upon perjury. In Scandinavia the oath-breaker touched a ring smeared with blood and consecrated to a divinity; and it was in accordance with a very ancient German practice that a man swore by his sword; while Christians swore by the cross, by relics, and by book and bell (Grimm, *op. cit.* p. 895 f., where many other forms will be found). Sometimes an animal was slaughtered to show how the perjurer would be dealt with—'Juppiter populum Romanum sic ferito, ut ego hunc porcum hic hodie feriam; tantoque magis ferito, quanto magis potes pollesque' (Livy, i. 24. 8). See on oaths A. H. Post, *Grundriss d. ethnologischen Jurisprudenz*, Oldenburg and Leipzig, 1895, ii. 478 ff., and art. OATHS.

56. When we turn to the bond of friendship, and

examine the cases in which blood is employed in its constitution, we find varieties in form, remarkably similar to those which we have been discussing. Sometimes the gods are adjured to punish those who break the compact (see above, §§ 10, 11), or simply to be witnesses to it (see above, §§ 7, 13, 14, 16). Sometimes they are made parties to it (see above, §§ 8, 16), or are invoked while an animal is being slaughtered (see above, §§ 10, 17). In other cases, the parties touch the blood (see above, §§ 7, 8), or dip their weapons in it (see above, §§ 9, 14), or touch or hold an animal while one of them slays it (see above, §§ 10, 13). Weapons or other articles are often introduced into the ceremony either as a 'witness' of the compact (see above, § 13) or as a symbol of the punishment which awaits the breaker of it (see above, § 14, and cf. § 33); and imprecations are frequently pronounced without any direct appeal to a supernatural power (see above, §§ 9, 10, 13, 14, 53). In some cases, as among the Bali, the rite consists of two parts,—of a blood-rite effecting the formation of the bond, and of a blood-rite with the operation of an oath,—while, in other cases, as among the Bendowen Dusuns, the oath stands alone (see above, § 13). There are instances, however, in which the ceremony consists of drinking or sprinkling blood without invocations or imprecations (see above, §§ 2, 49). In this connexion, Junker's (*op. cit.* p. 405; see above, § 5) account of the rite as practised by certain tribes south of the Welle is very instructive. The parties sit opposite to one another. A scratch is made on the chest of each, and a drop of blood is squeezed out. Each wipes the blood off the other with a piece of sugar-cane, which he chews, and the fibres of which he afterwards blows over his wound. At the same time, he repeats the points which have induced him to enter into the compact, and which are to be kept sacred; and at the end of each clause he adds the solemn words: 'If thou dost not hold to this, may my blood destroy thee' (cf. § 49). Here, then, we have an instance of a relation in which blood is the medium not only of formation, but of punishment (see Westermarck, *MI*, London, 1908, ii. 206 ff., 566 ff.). We have, in other words, an example of the operation of the principle which underlies the oath and the ordeal. That the same principle operates in cases in which the blood of the parties is not employed appears from such instances as that of the Beni, where the parties make friendship by eating portions of the same fruit or vegetable, and touching themselves ceremoniously with it before they eat (see above, § 18); or as that of the natives of Shira, where the 'brothers' hold a goat while it is being slaughtered, and fit rings of its skin upon one another's fingers (see above, § 21). A further confirmation is furnished by the cases in which the formation of the compact is due not to the volition of the parties, but to the force of external circumstances. The bond between them is of so intimate a character—the union between them is so complete—that its rupture cannot fail to be productive of evil consequences to the man who breaks it; and thus the sanction has its origin not in the intention of the parties, but in the essential character of the relation. It may well be that, in many instances, the sole punishment which awaits the false 'brother' is that which follows a breach of tribal custom or an outrage on public opinion. Still, it appears to be not improbable that, even in these instances, tribal custom and public opinion owe their force to a sanction of the nature indicated above.

P. J. HAMILTON-GRIERSON.

BROTHERHOODS.—Brotherhood, in its literal sense, is the condition in which a male person is descended from the same father or mother as one or more other persons; full brotherhood, that in which he is descended from the same father and the same mother as one or more other persons. Thus the sons of Jacob by his two wives and by their two handmaids together address their unknown brother Joseph: 'Thy servants are twelve brethren, the sons of one man in the land of Canaan' (Gn 42[13]). In theology, the term is metaphorically applied in two senses: the general sense in which all men are brethren, sometimes limited to those who are of the same faith, as when St. Peter says, 'Honour all men; love the brotherhood' (1 P 2[17]); and the particular sense in which it signifies persons living together in artificial communities as natural brothers live together in families before they leave the family home to establish families of their own. The ideal of brotherhood is one of the closest of all human relations—the only one that implies equality—there being no difference between brothers other than that arising from age.

The system of living in cloistral communities with a religious object belongs to the Brāhman religion, and was adapted by Śākyamuni to the Buddhist religion, and has been largely imported into Christianity. Under it, men have retired from the world by hundreds and by thousands. The grand Buddhist monastery of Nālanda, consisting of six convents, had ten thousand monks. They employed themselves chiefly in the study of the books of their religion and of science, especially medicine and arithmetic. In Ceylon, the monks take upon them vows not to kill, not to rob, to observe celibacy, not to lie, not to drink strong liquors, not to take food after noonday, not to dance or sing or make music; to use no perfumes, unguents, or ornaments; to have no luxurious bed or chair, and never to possess gold or silver. The general idea involved in these communities or brotherhoods is that of a simple and studious life, devoted mainly to the contemplation of religious subjects, and existing in circumstances of self-denial and asceticism—an ideal which has rarely been maintained for long in its original vigour.

The Buddhist monastic system has been practised from ancient times in Tibet. The monastery is there termed *gompa*, or 'solitary place.' Lhasa, the centre of religion in Tibet, was till recently inaccessible to Europeans, although it had been visited by Sarat Chandra Das and other Hindus. One of the most ancient and famous of the monasteries in the neighbourhood is that of Samye, visited by Chandra Das in 1882. It contains a chief temple, Wu-tse, four minor temples, and eight lesser shrines, the dwellings of the monks being in a two-storeyed building near the chief temple. The grand monastery of Tashi-Lhumpo is another, and a sketch of it has been published by the Royal Geographical Society. Here the monks are summoned by a trumpet to the great hall for prayers at 3 a.m. At the lamasery of Yarlung Shetag live 40 monks and as many nuns, whose children are brought up to succeed them. This is allowed because of the loneliness of the situation of the lamasery. In the *gompas* at Lhasa there are said to be 15,000 lamas, and in the province of Amdo nearly 30,000 in 24 lamaseries; and it is estimated that one-seventh of the entire population belong to the priesthood. The lamasery of Kumbum has a

temple covered in with tiles of gold, in commemoration of Tsongkapa, a Tibetan saint.

In the British provinces of Little Tibet, monasteries exist, which are thus described: The monastery at Kee in Spiti has the appearance of a hill-fort crowning an eminence. That at Kyelang in Lâhul stands on the projecting spur of a mountain side, distant from all other habitations, at an elevation of more than 12,000 feet above the level of the sea, and is approached by a steep and difficult path, which at some seasons is dangerous. In the spring of 1874 a monk and a nun were buried in an avalanche while walking up this path. In the richer monasteries in Tibet proper are extensive wardrobes of great value. Along the walls of the galleries are arranged numerous praying wheels. On one side of the hall is a wheel 5 feet in diameter, on each revolution of which a bell is struck. Outside the main building are the cells of the brethren. Col. Paske witnessed the performance by the monks of Kyelang of what is termed by him a spirit dance. The abbot took his position, attended by a band of musicians, who played loudly, when a party of 30 or 40 monks entered attired in grotesque costumes and wearing masks; after an excited and noisy dance, they retired to change these costumes.

The Tibetans take off their hats when they pass a monastery and shuffle past it on their knees. In these circumstances, it is easy to understand that the monks have acquired great political power.

In Siam, the monasteries are recruited from every class of society, especially the higher classes, and every son of a respectable family spends a year in one of them—a system which reminds one of that of the lay brethren in several English orders.

The account given by Herodotus (ii. 37) of the Egyptian priests implies that they lived in communities. He says: 'They are of all men the most excessively attentive to the worship of the gods, and observe the following ceremonies. They drink from cups of brass, which they scour every day; nor is this custom practised by some and neglected by others, but all do it. They wear linen garments, constantly fresh washed, and they pay particular attention to this. They are circumcised for the sake of cleanliness, thinking it better to be clean than handsome. The priests shave their whole body every third day, that neither lice nor any other impurity may be found upon them when engaged in the service of the gods. The priests wear linen only, and shoes of *byblus*, and are not permitted to wear any other garments or other shoes. They wash themselves in cold water twice every day and twice every night; and, in a word, they use a number of ceremonies. On the other hand, they enjoy no slight advantages, for they do not consume or expend any of their private property; but sacred food is cooked for them, and a great quantity of beef and geese is allowed each of them every day, and wine from the grape is given them; but they may not taste of fish. . . . The service of each god is performed, not by one, but by many priests, of whom one is chief priest; and when any one of them dies, his son is put in his place.'

It was in Egypt that the monastic movement in Christianity commenced. It is alleged that Frontonius established the first 'laura' in the year 151 at Nitria. In the early part of the 4th cent. the movement had taken root. It is said that the sanctity of St. Anthony attracted so many monks to his neighbourhood that he had to undertake the direction of them. St. Pachomius also, who died in 348, was head of a community; and that under Apollonius consisted of 500 individuals. The name *Dêr el-Bahari* signifies 'the convent of the North.'

From Egypt the practice speedily spread to Rome and to Gaul; and, when Augustine came to England, he found Celtic monks established there. Abbot Gasquet enumerates not fewer than 21 different orders.

They are distinguished into five classes as follows:—(1) Four orders of monks: the Benedictines, established at Monte Cassino early in the 6th cent. A.D.; the Cluniacs, dating from the 10th cent.; the Cistercians and the Carthusians, from the 11th. (2) Three orders of Canons Regular: the Augustinian, the Premonstratensian, and the Gilbertine. [The last is the only order originating in England, and was established in 1148.] (3) Two military orders: those of the Knights of St. John and the Knights Templar. (4) Four orders of Friars: the Dominicans, or Black Friars; the Franciscans, or Grey Friars; the Carmelites, or White Friars; and the Austin Friars. [These were all introduced into England in the 13th cent., and are commemorated in London by the names of places where their houses formerly stood.] (5) Eight lesser orders of Friars: the Brethren de Penitentia; the Pied Friars at Norwich; the Brethren of St. Mary de Arens at Westminster; the Brethren de Domine; the Trinitarian Friars; the Crutched Friars; the Bethlehemite Friars; the Boni homines. [These all date from the middle of the 13th century.]

The expression 'brotherhood' was also anciently applied to Gilds. The popular assemblies in the Cinque Ports are styled Court of Brotherhood and Guestling. Before the passing of the Judicature Act in 1873, the judges and serjeants-at-law together constituted the Society of Serjeants Inn, and the serjeants were always addressed by the judges in court as 'brother.'

E. W. BRABROOK.

BROTHERLY LOVE (Buddhist).—See LOVE (Buddhist).

BROTHERLY LOVE (Christian).—The principle of brotherly love was not first enunciated by Christianity. Exponents of earlier systems had given it notable expression, both among Gentiles and among Jews (see, *e.g.*, Ex 23^{4}, Lv 19^{18}, Dt 22^{1-4} 24^{10-15}, To 4, etc.; cf. art. 'Brotherly Love' in *JE*). Even the 'Golden Rule' had been anticipated, at least in a negative form (see Allen on Mt 7^{12}), and the association of the Christian with the Jewish doctrine is openly declared both by our Lord (Mt 7^{12} 22^{40}) and by His Apostles (Ro 13^{8-10}, Ja 2^{8}). In the earlier dispensation, however, the conception was narrowed by racial prejudice. For the practical realization of what was there implicit we must turn at once to the words of Jesus Himself.

I. **The teaching of Jesus.**—(*a*) The teaching of Jesus not only inculcates the duty of brotherly love (Mt $5^{21-26.\ 38-48}$ 7^{12}, Mk 10^{43}, Lk 10^{37} etc.), but assigns to it the utmost emphasis. From His doctrine of the Divine Fatherhood He leads us to infer the doctrine of human brotherhood (see the use of ἀδελφός in Mt $5^{22.\ 23}$ 7^{3} $18^{15.\ 35}$ etc., and cf. 23^{8}). The love of our neighbour is placed side by side with our love of God as the supreme obligation of religion (22^{34-40}); and so inseparable are the two, that in Christ's portrayal the heavenly love finds in the earthly love alike its truest expression and its unerring criterion (25^{40}, Mk $9^{36.\ 37}$, Lk $6^{32ff.}$; cf. Jn 13^{35} $15^{10.\ 12}$). No formal devotion grants

exemption from the claims of justice and mercy (Mt 23^{23} 15^{6}). To be wrong in one's relations with a brother is no less than to be wrong in one's relations with God ($5^{23.\,24}$ 25^{45}).

(*b*) There is a noble universalism in the love thus enjoined by our Lord. In His thought the term 'neighbour' loses all such limitations as in the earlier Jewish interpretation were imposed by national or personal animosity. It embraces all men (7^{12}) irrespective of race (Lk 10^{25-37}), of social status ($14^{12.\,13}$), of character (Mt 5^{43-48}), and even of personal relationships (5^{44}, Lk 6^{27}). While the wider human brotherhood itself includes an inner brotherhood of discipleship (Mk 3^{35}, Jn 13^{34} 15^{12}), all children of the common Father have a place in the one great fraternity of love.

2. The Apostolic writings.—(*a*) The prominence assigned to brotherly love in our Lord's own teaching is re-asserted in that of His Apostles. Frequent exhortations are found in the Epistles reminding the early Christians of the obligations it involves (see, *e.g.*, Ro 12^{10}, He 13^{1-3}, 1 P 1^{22}, 1 Jn 3^{11} 4^{21}). So well known, indeed, are those obligations, that in one place there is almost an apology for allusion to them (1 Th 4^{9}). Whether viewed from the standpoint of worship (*θρησκεία*) or from that of piety (*εὐσέβεια*), love is to be the inevitable outcome of religion (see Ja 1^{27}, 2 P 1^{7}), and all that is implicit in it St. Paul sets himself carefully to expound (1 Co 13). Its practical influence in the life of the Church is to be seen in its power to place master and slave upon equal terms (Philem ^{16}), and in the adoption of 'brother' as an acknowledged term both of address (see 1 Th 1^{4} etc.) and of reference (1 Co 8^{13}, Ja 1^{9}, 1 Jn 2^{9}). Even so specific an expression as 'the brotherhood' appears to have been recognized before A.D. 64 to signify the body of Christian believers (1 P 2^{17} 5^{9}).

(*b*) The brotherly love thus required or assumed is regarded as essential to the Christian life. Its obligation is 'the royal law' (Ja 2^{8}). Its absence nullifies all other virtues (1 Co 13^{1-3}); its presence implies fulfilment of all duty (Ro 13^{8-10}, Gal 5^{14}). It is, in fact, the pledge of a live faith (Ja 2^{14-18}), and the criterion of true sonship (1 Jn 2^{9-11} $3^{10.\,14}$ 4^{7} 5^{1}). In all this the servants' doctrine is as their Lord's.

(*c*) It has been disputed, however, to what extent the Apostles are also at one with Christ in their conception of the scope within which this law of love holds sway. In favour of a distinction between the two points of view, it may be argued: (*α*) that the prevalent sense of *ἀδελφός* in the NT is that of 'fellow-Christian'—a restricted meaning which is sometimes markedly imposed by the immediate context (see, *e.g.*, 1 Co 5^{11} 6^{6}); (*β*) that the love required frequently refers to the brotherhood of believers only (Ro 12^{10}, 1 Th 4^{9}, He 13^{1}, 1 P 1^{22} 2^{17} 3^{8}); and (*γ*) that, even in the report of our Lord's own teaching, the universalism of the Synoptic Gospels has, in the Fourth Gospel, been merged in the more limited conception (see Jn 13^{34}, 15^{12}). On the other hand, it is quite clear, from such injunctions as are found in Gal 6^{10} and 1 Th 5^{15}, that the Apostolic law of love towards men possessed an application as broad as humanity itself, and the specific reference of Ro 12^{20} shows that not even enemies were excluded from its operation. The teaching of Jesus, therefore, has not really been limited by His followers. The utmost that can be maintained is that the Apostles thought of two separate circles of brotherhood—the inner circle, which comprised their fellow-believers, and the outer circle, in which all mankind were allowed a place. They themselves specifically distinguish these two degrees of fellowship (see Gal 6^{10}, 2 P 1^{7}). Yet, though there may be special stress upon the more limited love, the wider love is recognized as its natural outgrowth and its perfect fulfilment (see 2 P 1^{7}).

3. The practice of the Early Church.—Certain special forms, in which the brotherly love of the first Christians found expression, call for particular mention at this point. (*a*) *The Love-feast and the Lord's Supper.*—The early disciples used to share in a common meal, which was intended not only as a means of assisting the poorer brethren, but also as a manifestation of the Church's unity of spirit (see Ac $2^{42.\,46}$ 6^{2} 20^{7}, and Tertullian's famous passage, *Apol.* 39). At first these love-feasts were connected with the Lord's Supper (see 1 Co $11^{20ff.}$, and Ign. *Smyr.* 8; and cf. art. AGAPE). But it was not long before the association of the two meals led to serious abuse (1 Co $11^{20ff.}$, Jude ^{12}, 2 P 2^{13})—a fact which, along with the Roman government's suspicion of all secret societies, led, in the 2nd cent., to their ultimate separation (see Pliny's Letter to Trajan, 96). Even after the separation, however, the Lord's Supper, as well as the Agape, would constitute an expression of the disciples' common brotherhood (see 1 Co 10^{17}). In the 18th cent. John Wesley made an interesting attempt to revive the love-feast in his own societies, and in an attenuated form it still survives among them.

(*b*) *Hospitality.*—The circumstances of the age in which Christianity had its birth rendered hospitality a practical necessity. It is not surprising, therefore, that the early Christian literature lays stress on this particular application of brotherly love. The entertainment of strangers was the duty not merely of the 'bishop' (1 Ti 3^{2}, Tit 1^{8}), but also of the ordinary disciple. In certain Scriptural injunctions its exercise is confined to the case of fellow-Christians (1 P 4^{9}, 3 Jn $^{5-8}$); but the absence of restriction in other places shows that the broader conception of the duty was also appreciated (Ro 12^{13b}, He $13^{1.\,2}$, 1 Ti 5^{10}; Clem. Rom. 1). See HOSPITALITY.

(*c*) *Charity.*—The practice of liberality towards the poor was another expression of the Church's brotherhood. As was natural, this was directed mainly to relieving the necessities of fellow-disciples (Ro 12^{13a}, He 6^{10}, 1 Jn $3^{17.\,18}$, and probably Ac 9^{36}), although the limitation is not always named (see He 13^{16}). A signal illustration of such charity is found in St. Paul's collection for the saints at Jerusalem (Ro 15^{26}, 2 Co 8^{1-15} etc.). See CHARITY.

(*d*) *The 'communism' of the Early Church.*—It was in connexion with such care for the poorer brethren that an experiment was undertaken which has sometimes been described as the 'communism' of the Early Church. 'And all that believed were together, and had all things common; and they sold their possessions and goods, and parted them to all, according as any man had need' (Ac $2^{44f.}$; cf. also 4^{32}). We must be careful, however, not to exaggerate the significance of this beautiful manifestation of brotherly love.

> 'There is,' in the words of Peabody (*Jesus Christ and the Social Question*, p. 24), 'no evidence that what is reported of the little company at Jerusalem became in any degree a general practice, as though enjoined by the teaching of Jesus. No other instance of communal ownership is cited in the Book of Acts; but, on the other hand, the mother of Mark continues to own her home in Jerusalem (Ac 12^{12}), and voluntary relief is sent from Antioch by "every man according to his ability" (11^{29}). The Apostle Paul knows nothing of such communistic regulations (2 Co 9^{7}, 1 Co 16^{2}). . . . In short, the communism of the day of Pentecost, like the gift of tongues described in the same chapter, was a spontaneous, unique, and unrepeated manifestation of that elevation and unity of spirit which possessed the little company in the first glow of their new faith. Still further, this sharing of each other's possessions, which was thus for the moment a sign of their perfect brotherhood, was even then no formal or compulsory system.' (See Ac 5^{4}; cf., further, art. COMMUNITY OF GOODS.)

It is probable that the disappointment of the hope of a speedy Parousia, the rapid growth of the Church, and the presence of unworthy members in the Christian community, prevented the repetition or the expansion of this experiment (see J. H.

Moulton's essay in *The Social Teaching of the Bible*, pp. 214-216).

4. **Later development.**—The history of the world's social progress, since the days of the Apostles, has been largely that of the leavening of human life with the principles of brotherly love inherent in the Christian gospel. It is to its spirit that we owe the abolition of slavery, the cleansing of the prisons, the care of the sick poor, the suppression of infanticide, the exaltation of womanhood, the improvement in conditions of labour, and, in general, the birth of our modern concern for the down-trodden masses dwelling in our great cities. And, as men look forward to future progress, working towards a reformed society securely based upon truth, justice, and mercy, it is in the gospel of Christian brotherhood that the adequate motive-power is to be sought. Only when the universal brotherhood of man is acknowledged as an inevitable inference from the universal Fatherhood of God, only when the world's law of greed and hate is vanquished by the Christian law of service and love, will the principle of love have received its perfect fulfilment, and the City of God at length have been built upon earth.

BROWNING.—See POETRY (Christian).

BROWNISM.—**1. Life of founder.**—Brownism derives its name from Robert Browne, third son of Anthony Browne of Tolethorpe,* Rutlandshire. Born about 1550,† of his earlier years nothing is known, but he appears to have entered Corpus Christi College, Cambridge, in 1570, and to have graduated in 1572.‡ The college at that time was noted rather for licence than for learning or seriousness.§ The university, however, as a whole was a centre of Puritan influence; and Browne, yielding to this, became one of those 'known and counted forward in religion.'‖ In other words, he was concerned about 'the woeful and lamentable state of the Church,' and its need of a further reformation. He 'debated' those things 'in himself and with others,' and 'suffered some trouble about them'¶ from opponents. Then, at some indefinite time after 1572, he taught 'schollers' for the space of three years**—having a 'special care to teach religion,' and keeping them 'in such awe and good order as all the townsmen where he taught gave him witness.' Moreover, he still 'bent himself to search and find out the matters of the Church'; he 'laboured to put in practice all he found, both in his school and the town'; †† in consequence, 'he got himself much enmity of the preacher,' and was 'presently discharged.' For a time, however, he continued to teach 'with great good will and favour of the townsmen ‡‡ till' an outbreak of the plague occasioned his recall home to Tolethorpe. Next, with his father's leave, he returned to Cambridge, not for study so much as with the hope of staying 'his care' about the absorbing Church question. To this end he resorted to Mr. Richard Greenham, rector of Dry Drayton, 'whom of all others he heard say was most forward.'* Mr. Greenham allowed him—'with others'—to expound in his house 'that part of Scripture which was used to be read after meals'; and, contrary to law, did not forbid him to teach 'openly in the parish.' This led to his being 'moved' by 'certain in Cambridge,' 'and also with consent of the Mayor and Vice-Chancellor,' to his preaching in Cambridge. He was not unwilling, but was checked by his objection to receiving the Bishop's 'license and authority.' He could go so far as to be 'tried' (*i.e.* examined) by the Bishops, and to 'suffer their power, though unlawful, if in anything it did not hinder the Truth.'† But he would not admit their right to authorize or ordain him; and when Archbishop Grindall's 'seals were gotten him by his brother'‡—apparently three times over—he lost the first, burned the second, and, though he kept the third by him,§ openly declared that they meant nothing to him. He preached to his Cambridge congregation for 'about half a year,' but refused to take charge of them, because 'he saw the parishioners in such spiritual bondage that whosoever would take charge of them must also come into that bondage with them.' This confirmed him in the principle which had gradually been growing clear to his mind, that 'the Kingdom of God was not to be begun by whole parishes, but rather of the worthiest were they never so few';‖ and, failing to convert the people to a like view, he 'sent back' the 'stipend' they had 'gathered' for him, 'and gave warning of his departure.'¶ His next sphere was in Norfolk—where some very forward** were said to be. He lodged with Robert Harrison,†† master of an hospital in Norwich; but went out from that city on preaching tours which roused the whole neighbourhood, and soon embroiled him with the Bishop.‡‡ Another result, however, was the gathering of a 'company' who agreed to join

* The family is described as 'ancient and worshipful.' For full accounts of it, see *Transactions of the Congregational Historical Society*, vol. ii. no. 3.

† An inference from the fact that he was over 80 at the time of his death in 1633.

‡ Masters, *History of Corpus Christi College*, p. 9. There is some uncertainty, as two others of the same name entered—the one in 1557, the other in 1565.

§ See Strype's *Parker*, 1821, bk. iii. (sub. 1548).

‖ See his own *True and Short Declaration* (unpaged). A copy is in the *Congregationalist* for 1882; the original is in the Lambeth Library.

¶ *Ib.* ** *Ib.* †† Perhaps Stamford.

‡‡ Tradition says Islington, but his residence there was some time after he 'conformed' in 1585. The statement (Strype's *Parker*, bk. iv., sub. 1571) that he became chaplain to the Duke of Norfolk before 1571 is due to the confounding of him with another Robert Browne, the Duke's messenger, often mentioned in the State Papers and Acts of Privy Council between 1571 and 1591. Nor is there any proof of his identity with the Browne cited in connexion with 'Undertree's Plot' (*ib.* bk. iv., sub. 1574), nor yet with the Brown (of Trinity College) 'convented' before the Vice-Chancellor for Puritan leanings in 1572 (*ib.* bk. iv.).

* Rev. Richard Greenham, 'a man renowned for his care, pietie and paines; and for his singular dexteritie in comforting afflicted consciences' (see dedication of works to James I. [1612]).

† *True and Short Declaration.*

‡ Most likely his eldest brother Philip, made incumbent of Little Casterton in 1591 (a family living), and deprived in 1604 for conformity. Two seals were issued—on 6th and 7th June 1579 respectively—one a Dismissory Letter, and one a Licence to preach (Burrage, *The True Story of Robert Browne*, 1906, p. 5).

§ Later he parted with it (*i.e.* the Bishop's licence) to a Justice of the Peace, who delivered it to the Bishop of Norwich. But apparently he was not ordained.

‖ *True and Short Declaration.* This shows that Browne did not borrow his conception of a Church, but worked it out for himself.

¶ About the same time he 'fell sick,' and during his illness was served by an 'officer named Bancroft' (Richard, future Archbishop) with the Bishop's letter forbidding him to preach.

** Immigrants from the Low Countries were numerous in and near Norwich—including some Anabaptists (Blomefield, *Norfolk*, 1805-10, vol. ii. pp. 282, 292-3). Lollard influence was also strong (see, *e.g.*, map in Trevelyan's *England in the Age of Wyclif*, 1899, p. 352).

†† A Cambridge associate whom he converted to his views. They went to Middelburg together, and there disagreed. He died before 1588 (Bredwell, *Rasing the Foundations*; see also Strype's *Parker*, bk. iv. cap. 35).

‡‡ See his (*i.e.* Freke, Bishop of Norwich) letters to Burghley, April 19 and August 2, 1581 (Lansdowne MSS, xxxiii. 13, 20). Burghley was a *distant* kinsman to Browne.

together, on the basis of his teaching, for Church fellowship, by means of a solemn covenant to the following effect: *

(1) That they would 'keep and seek agreement' one with another under Christ's laws.

(2) That they did choose, and would obey, certain to 'teach them and watch for the salvation of their souls,'—having had due 'trial and testimony' of their fitness.†

(3) That they would hold regular meetings for 'prayer, thanksgiving, reading of the Scriptures, exhorting, and edifying—either by all *men* which had the gift, or by those who had the special charge before others.'

(4) That they would allow any member of the Church to 'protest, appeal, complain, exhort, dispute, reprove, etc., as he had occasion, but yet in due order.'

(5) That they would 'further the Kingdom of God in themselves, and especially in their charge and household, if they had any; or in their friends and companions, and whosoever was worthy.'

(6) That they would observe the rules agreed upon 'for gathering and testifying voices in debating matters'; 'for an order of choosing teachers, guides, and relievers'; 'for separating clean from unclean'; 'for receiving any into the fellowship'; 'for presenting the daily success of the Church and the wants thereof'; 'for seeking to other Churches to have their help bring better reformed, or to bring *them* to reformation'; 'for taking an order that none contend openly, nor persecute, nor trouble (the Church) disorderly, nor bring false doctrine nor evil cause (into it)—after once or twice warning or rebuke.'

This took place at Norwich,‡ probably early in the spring of 1581, and marks the formation of the first Church of its kind in England.§ The 'covenant' here described presents a rough outline of Brownism on its positive or constructive side; its negative or aggressive side may be illustrated by Browne's own report‖ of a conversation which he had with his colleague Harrison some time before. From this it appears that Browne (showing himself more extreme in some points than Harrison) maintained that 'preachers who submit themselves to the popish power of the Bishops, or any way justify or tolerate it,' cannot 'do duty as lawful pastors and preachers'; that 'Parishes guided either by such preachers or by the Bishops' and their 'officers' cannot 'be lawful and the Churches of God'; that such preachers cannot really 'beget faith by their preaching,' neither can they really 'call or win men to goodness,' nor can any profit be got from their 'blind reading of chapters and the (Church) service.' With these convictions fierce invectives against the preachers came naturally. Here, *e.g.*, is a specimen: 'Therefore say no more ye wicked preachers that ye hold the foundation, or that ye preach. For what is it worth to say unto Christ, "Hail, King of the Jews," and bow the knee before Him, when you cast your filthy disorders and popish government as dung on His face. You have not yet gathered the people from the popish parishes and wicked fellowship, neither have planted the Church by laying the foundation thereof . . .' Declamation in this strain made a sensation. The common people of Bury St. Edmunds and thereabout heard him gladly, and 'assembled themselves to the number of a hundred at a time in private houses and conventicles to hear him.'¶ But it also led to his imprisonment by the Bishop 'upon complaint made by many godly preachers for delivering unto the people corrupt and contentious doctrine.'¶ Released at the instance of his kinsman Burghley,** and straightway resuming what he considered his mission, he presently found himself 'a prisoner

* See *True and Short Declaration*, pt. ii.

† This implies that Browne (as pastor) and Harrison (probably as teacher), etc., were then chosen.

‡ Browne speaks of his 'coming to Norwich, and how the company *there* joined together.'

§ The Independent Church of Richard Fitz (1571) hardly (perhaps) deserves the name, and the next was not formed till 1592, in Nicholas Lane, London.

‖ *True and Short Declaration.*

¶ Freke's letter to Burghley (April 19, 1581), Lansdowne MSS, xxxiii. 13.

** Letter to Freke (April 21, 1581). See Fuller, *Church History*, vol. v. p. 63 (Brown's ed.).

at London.'* Harrison, too, was imprisoned† with others of the Church. So 'at last, when divers of them were again imprisoned, and the rest in great trouble and bondage out of prison, they all agreed and were fully persuaded that the Lord did call them out of England.'‡ The place selected (possibly because of Thomas Cartwright's congregation there) was Middelburg;§ and thither the greater portion‖ of the Norwich 'company,' including Browne and Harrison, transferred themselves—near the end of 1581. In Middelburg Browne's ideal seems to have encountered little or no outward hindrance, but it broke down woefully under the stress of inward disabilities.¶ Two years later, Browne, sore at heart but keeping a bold front, was on his way to Scotland—accompanied by just four or five men and their families. The rest of his career need not be dwelt upon. Landing at Dundee, he reached Edinburgh by way of St. Andrews on Thursday, 9th January 1583–4, and was soon in trouble. On three successive Tuesdays he appeared before the Edinburgh Presbytery—maintaining (on the 14th) that 'witnesses at baptism were not a thing indifferent, but simply evil'; alleging (on the 21st) that 'the whole discipline of Scotland was amiss'; and acknowledging (on the 28th) the authorship of certain books exhibited. Out of these Mr. James Lawson and Mr. John Davidson were deputed to gather the articles deemed erroneous for presentation to the King—Browne, meanwhile, being, it would seem, held in custody. But His Majesty, assuredly rather to spite the Presbytery than to befriend Browne, let him go free.**

After some months he appears to have returned to Stamford; then to have gone abroad, leaving his wife behind; and then again to have come back to Stamford. This was about March 1585; and in the autumn of the same year, October 7th, he betrayed the crushing effect upon him of several months' imprisonment by a promise of 'conformity' to the Established Church.†† Next day he set out for Tolethorpe, bearing a letter of intercession from Burghley to his father. Here he lived, under paternal surveillance, till February 1585–6, when his father, not having found him sufficiently docile, asked and obtained leave to remove him 'to Stamford or some other place.' Whether Browne actually removed is doubtful—since there is proof that later in the year (April 19th, May 5th, June 25th) both he and his wife were three times cited—on a charge of non-attendance at church—in the Bishop of Peterborough's Court by the churchwardens of Little Casterton, the parish in which Tolethorpe Hall is situated.‡‡ The next certain fact is his appointment on November 21st as schoolmaster in St. Olave's Grammar School, Southwark §§—an uneasy situation, which he had vacated before June 20, 1589, when Burghley solicited Howland, Bishop of Peterborough, for his re-admission 'into the ministry' and 'some ecclesiastical preferment,' on the ground that he 'hath now a good time' been an obedient son of the Church.‖‖ Two years later, 'on the

§§ An exact transcription of the (drastic) terms of his engagement is printed by Burrage, *op. cit.* pp. 44, 45.

‖‖ Lansdowne MSS. ciii. 60.

30th June 1591, Robert Browne, clerk, was admitted and instituted to the rectory of the ecclesiastical parish of Little Casterton in the county of Rutland and diocese of Peterborough'—of which parish his eldest brother, Francis Browne, then occupant of Tolethorpe Hall, was the patron.* Finally, on September 2, 1591, he became 'rector' of the parish of Achurch-cum-Thorpe, Waterville, in Northamptonshire; 'was admitted to the holy orders of deacon and priest' on the 30th of the month;† and here (perhaps excepting one obscure period of ten years) he lived out the remaining forty-two years of his existence. He died in Northampton gaol, and was buried at St. Giles' Church of that town on October 8th, 1633.‡

2. Principles.—Though Browne had receded from some of his extreme views and taken office in the Church he had so bitterly condemned, there is proof § that he still held to the essentials of his Church theory; and if this be taken as evidence of conscious insincerity, it may be remembered at least, by way of extenuation, that, to quote his own words, he was 'broken . . . much with former troubles,'‖ that the influences brought to bear upon him in his weakness were of exceptional force,¶ and that the limited extent of his 'conformity' seems to have been generally understood.**

Some indication of the principles connoted by the term Brownism has already been given. But a more systematic statement is desirable.

(1) First, then, it should be said that Brownism concerned itself merely with a doctrine of the Church. Theologically, Browne was even severely orthodox †† in the current Calvinistic sense. Equally so were his successors.‡‡

(2) With Protestants generally, of the consistent sort, he accepted the Scriptures as the sole rule of Christian faith and practice—unaffected by the traditions of men, including those of the Early Fathers.

(3) Starting from this basis, he came to the conclusion that the Protestant Churches (particularly the English Church), while Scriptural as to their faith, were far from Scriptural as to their practice. Reformed up to a certain point, the English Church had stopped short of the full Reformation which was demanded if it would correspond to the NT model of a Church. Many even of the more 'forward' Puritans stopped short of this—pleading as a sufficient excuse that the needed reforms were not to be had without concurrence of the civil power, and that till such concurrence was forthcoming they could only 'tarry.' Here Browne took his stand. He thought the evils arising from an imperfect Reformation of the Church so great and pressing, that the very existence of Christianity called for the instant removal of them. Since, too, the will of Christ—made clear in the NT—necessitated their removal, to plead for delay on the ground of a 'Prince's' unwillingness was intolerable disloyalty to Christ. The Prince is supreme in his own sphere, but his sphere is not the Church. He is 'to rule the commonwealth in all outward justice, to maintain the high welfare and honour thereof with outward power, bodily punishment, and civil forcing of men.' He is also to 'look to' the Church so far as 'outward provision and outward justice' are concerned: for it is of his 'charge' 'because it is *in* a commonwealth.' But the Prince has no manner of right to compel the Church to be, or to remain, what Christ forbids. Nay, he has no right directly to 'compel religion' at all, *i.e.* 'to plant churches by power, and to force a submission to ecclesiastical government by laws and penalties.' If a true Church is already established, the Prince either is or is not a member of it. If he is, then—as God is no respecter of persons—he is, like every other member, subject to its discipline. If he is not, and has no mind to further or favour its establishment, then those who are Christ's freemen must proceed without him; and even though he should oppose them to the uttermost, they must go on just the same. Thus it appears that separation from a false Church, or from one persistently corrupt, in order to set up and realize the pure and true, is a right which the Prince dare not withhold, and a duty which the 'faithful' dare not decline.

Such is the pith of Browne's *Treatise of Reformation without tarying for anie*, which he wrote and printed at Middelburg in 1582. Not without reason has it been called* the first plea in English for the Church's independence of the State and essential autocracy. But on the Continent he had been more than anticipated by the Anabaptists;† for, in one respect at least, his plea, as compared with theirs, presents a remarkable limitation, viz. that he seems to permit, if not to oblige, the Prince—after the example of 'the good kings of Juda'—not indeed to 'force the people by laws or by power to receive the (true) Church government,' but yet, when once they had received it, to keep them to it, and even to 'put them to death' if 'then they fall away.' How entirely subversive this might become of his whole position—supposing him serious—Browne did not pause to reflect.

(4) Published at the same date and place, and (in some copies) bound up with the *Treatise*, was a *Catechism* to which the *Treatise* was meant to serve as an introduction. Its title began, 'A booke which sheweth the life and manners of all true Christians . . .,' and if the *Treatise* urged the instant need of proceeding to establish the true Church, this sets forth the character of the Church to be established. In some points it obviously agrees with the Presbyterian ideal, as expounded, *e.g.*, by his contemporary Cartwright. The conception of the sacrament is the same; its permanent officers are the same—Pastor, Teacher, Elders, Deacons, Widows—and also its description of their functions; and it makes the same demand for 'discipline.' But there are notable divergences. Thus the definition ‡ of a Church is much more strict—'a companie or number of beleevers which by a willing covenaunt made with their God as under the governement of God and Christ, and keepe his lawes in one holy communion.' Again, it was more democratic. From first to last the people of the Church, as just described, are accounted supreme. This appears (*a*) in the

* Burrage, *op. cit.* p. 65 f. † *Ib.* ‡ *Ib.* p. 72.

§ In a MS of his recently found in the British Museum by Mr. Champlin Burrage, and edited by him for the Congregational Historical Society. It is in the form of a letter to his uncle Mr. Flower, is dated 31st December 1588, and contains the passages quoted by Dr. Bancroft in his famous 'St. Paul's Cross' sermon of the following February.

‖ See the aforesaid MS, where he speaks of having been imprisoned 28 times.

¶ *e.g.* the breakdown of his Church experiment at Middelburg, his bad state of health, his loneliness, the pressure brought to bear upon him at home and by Burghley, etc.

** Bredwell, *e.g.*, assumes this in his *Rasing of the Foundations of Brownism*, 1588.

†† Cf. Questions 2–34 of his *Booke which sheweth the life and manners of all true Christians*, 1582.

‡‡ Cf., *e.g.*, their *Confession of Faith*, 1596.

* See, *e.g.*, Walker, *Creeds and Platforms of Congregationalism* (New York, 1893), p. 12.

† *Ib.* for the Anabaptist position; see § 35 of the (Mennonite) Confession quoted by Walker (p. 5). The latter's date is 1609, but it expresses their earliest views. See also pp. 15–17 for possible influence of Anabaptists on Browne. Dexter's opinion seems nearest the truth 'that Browne owed nothing to Anabaptist influences, and that he was a disciple of no one' (*Congregationalism as seen in its Literature*, p. 103).

‡ The first words are—'Christians are a companie. . . .' Browne did not believe that Christians could be such and live apart from Church fellowship.

declared equality of all the members as regards spiritual privilege: 'Everie one of the church is made a Kinge, a Priest, and a Prophet under Christ, to upholde and further the kingdom of God, and to breake and destroie the kingdome of Antichrist and Satan.' (*b*) In the mode of appointing and ordaining officers. These must first be tried by the whole Church as to their 'guiftes and godlines.' If, indeed, a man has already given proof of his 'gifts and godliness' by the right gathering of a church, then those composing that church, or those who afterwards join it, must tacitly receive him 'by obedience' as their 'guide and teacher.' But if a church already planted is in need of any officer, then the free and clear 'consent of the people' 'gathered by the elders or guides' must precede his appointment. (*c*) In the power of the Church as a whole to discipline and even depose unworthy officers. (*d*) In the right of the Church, through its own 'elders or forwardest,' to recognize its officers by ordination 'as called and authorized of God.' Usually this is done 'with prayer and imposition of handes'—but as to the latter it 'is no essential pointe of their calling,' and ought to be left, when it is 'turned into pomp or superstition.' (*e*) In the fact that, while the holding of 'synodes or meetings of sundrie churches' may be expedient, it is voluntary. Their use is to enable the stronger churches to help the weaker in 'deciding or redressing of matters' when such help is sought or when it is evidently needed.*

(5) Brownism, as thus outlined, became the accepted platform of all the early Separatists. Younger leaders like Henry Barrow, John Greenwood, Francis Johnson, and Henry Ainsworth may have varied the emphasis, cleared away ambiguities, or given to this or that principle a more rigorous and detailed application; but, notwithstanding their vehement desire to repudiate† all connexion with Browne or his name, it could not reasonably be denied that he was 'the shop of their store and the steel of their strength.'‡ Proof of this lies to hand in their writings, particularly in a series of authoritative documents which they issued for the chief Separatist Church during the first twenty years of its existence.§ Only on one point of importance has there seemed room for doubt, and here the difference between Browne's teaching and that of Barrow seemed great enough to warrant a description of the latter as 'Barrowism.' This point is the eldership and its relation to the Church. According to Dexter, the teaching of Barrow presents the Church as having power to elect the elders, but not to control them or 'seriously limit their action' or remove them from office for any cause whatever. Thus he practically destroyed the Church's self-government, and erected the eldership into 'a ruling oligarchy,' whereas Browne made it a pure democracy.‖ But against this view may be set Barrow's explicit statement of the contrary. 'I never thought,' he says in one place, 'that the practice of Christ's government belonged only to those officers. I rather thought it had been their duty and office to have seen this government faithfully and orderly practised by all the members of the Church, . . . so that if these

† Cf., *e.g.*, Barrow and Greenwood's outburst during the 'conferences' with London ministers (April 1590). The one says: 'We are no Brownists. We hold not our faith in respect of any mortal man, neither were we instructed by him, or baptized into his name, until by such as you were so termed.' The other says: 'Browne is an apostate, now one of your Church.' Yet it is probable that Greenwood at least had been influenced by Browne (see the writer's *Henry Barrow*, p. 13), and both must have read his writings.

§ See end of article.

‖ See Walker, *Creeds and Platforms*, p. 31 f.

officers or any of them transgress, *the Church reserveth power to every member freely* (*according to the quality of the offence and the rules of the word*) *to admonish and reprove the whole, to censure and excommunicate such officers so offending.** No less conclusive is the evidence of a document published in 1596 under the title, *A true confession of the faith and humble acknowledgment of the alegeance which wee hir Majesties subjects falsely called Brownists doo hould towards God and yeild to hir Majestie.*' It emanated from the Separatist Church formed in London, 1592, and soon afterwards exiled to Amsterdam. This Church had Francis Johnson for pastor, and Henry Ainsworth for teacher—joint authors of the Confession, and both disciples of Barrow. Thus its words on the point in question may be taken as Barrow's own. But these say decidedly:

> 'That as every Christian Congregation hath powre and commandement to elect and ordeine their own ministerie according to the rules prescribed, and whilest they shal faithfully execute their office to have them in superaboundant love for their worke sake—to provide for them, to honour them and reverence them, according to the dignitie of the office they execute: so have they also powre and commandement when anie such defalt, either in their lyfe, doctrine or administration breaketh out, as by the rule of the word debarreth them from, or depriveth them of their ministerie, by due order to depose them from the ministerie they exercised; yea, if the case so require and they remayne obstinate and impenitent orderly to cut them off by excommunication.'†

Johnson, it is true, drew off from this position and split the Church by urging a strictly Presbyterian view of the eldership.‡ But a majority of the people adhered to Ainsworth in his strenuous defence of the confessional view—which he calls the Church's 'ancient faith'—and he had also the warm support of John Robinson§ with his church at Leyden. A more plausible case of difference between Browne and Barrow seems to lie in their respective ways of speaking about the relation of the Civil Power to the Church. For, while Barrow declares it to be 'the office and duty of Princes and Rulers . . . to suppress and root out of their dominions all religions, worship, and ministries'‖ other than the true, Browne's language is certainly more restrained. But here also the contrast is less in reality than in appearance. One drastic assumption of his has already been noted. And the following from his reply to Mr. Cartwright¶ is not so very far short of Barrow's position:

> 'If the commonwealth (as it ought) had long ago taken from the ministry those tenths and popish livings, then Jericho being once destroyed (I mean the antichristian churches put down) had not so soon been built again. . . .'

Nor did he show himself (previous to his conformity) less extreme in a third point—his practical attitude towards the establishment. Barrow's attitude is perfectly explicit in the *Confession* of 1596 (Art. 32), which calls upon all who 'will be saved' to come forth with speed from this antichristian estate; upon all its ministers 'to give over and leave' their unlawful offices; and upon all people of what sort or condition soever to withhold their goods, lands, money or money worth

* See the present writer's *Henry Barrow* (p. 106) for this and other references. The only argument alleged to the contrary seems to be one drawn from the 'silence' of what is called the London Confession of 1589: 'A true description out of the Word of God of the visible Church.' But the absence of specific reference to the point may be explained by the ideal character of this document. It is a declaration rather than a Confession.

† §§ 23, 24.

‡ He defends it in his latest book, *A Christian Plea* . . . (1617), pp. 306–16. But he had been advocating it since 1609 (see present writer's *Henry Barrow*, pp. 254 ff., 268 ff.).

§ See his *Justification of Separation* . . . *against Mr. Richard Barnard his invective* . . . (1610), where, *re* the 6th error alleged by Mr. Barnard, he goes into the question with great thoroughness. Johnson replied in his *Answer touching the Division* (1611), p. 27; and Robinson rejoined—at Ainsworth's instance (see the latter's *Animadversion to Mr. Clifton's Advertisement* [1613], pp. 111–117).

‖ Henry Barrow, *Platform*, 1590 (unpaged).

¶ *An answer to Mr. Cartwright his letter* . . ., p. 20.

from the maintenance of its false ministry and worship. Browne's was the same. It is, *e.g.*, the burden of his letter to Mr. Cartwright that you cannot communicate with a false Church without partaking in its pollution; and so neither the true Church as a whole nor any 'part' or 'member' of it ought to communicate.* Perhaps the utmost which can be conceded to him is that he may not have forbidden absolutely a casual 'hearing' even of prelatic ministers or attendance at their services, as did the authors of the *Confession*.†

Brownism of the strictest type—that which pushed its differences‡ from the Church of England to the forefront—found a temporary asylum in Amsterdam and turned out unequal to the test of experience. In Leyden—under the leadership of John Robinson, who at first was as thorough-going§ as Barrow or Ainsworth, but became with time increasingly tolerant—it learnt to lay the greater stress on constructive elements;‖ and to develop these in a form of church-life which could bear translation to the shores of New England, and there plant the germs of a vigorous democratic Church-State. In England it ran a somewhat similar course. Stripped of its harshest features, it was accepted from the hands of John Robinson by Henry Jacob (1563?–1624), who 'gathered' at least some of the scattered 'remnants' of the London congregation of 1592 and organized (on a semi-Separatist basis)¶ what has been called the first distinctively Independent Church in England. But the name 'Brownism' did not die out. It lived on as a descriptive or abusive epithet of 'all and sundry' who, for whatever cause, broke away from the National Church. Nor did the extreme views originally suggested by the name cease to win vehement and consistent advocates.** These appear from time to time far down the 17th century.†† Indeed, such advocates have never been absent altogether from the ranks of English Nonconformity. But, on the whole, it may be said that Brownism has survived only on its nobler side; and that its essential witness has been continued and fulfilled in the principles which give life and power to modern Congregationalism.

§ The stages are indicated by (*a*) *A Justification of Separation*, 1610, (*b*) *Religious Communion Public and Private*, 1614, (*c*) *A Just and Necessary Apology*, 1625, and (*d*) *A Treatise of the Lawfulness of Hearing Ministers in the Church of England*—printed in 1634 but written some years before.

‖ Cf. the curiously Erastian and studiously negative 'Seven Articles' prepared for submission to the Privy Council in 1618 and signed by Robinson and William Brewster (reprinted by Arber, *Story of the Pilgrim Fathers*, pp. 280–81).

¶ See *A Confession and Protestation of the Faith of Certain Christians in England*, 1616, reprinted in Hanbury, *Historical Memorials relating to Independents*, i. 293 ff.

** See *A Necessitated Appeal Humbly tendered to the High Court of Parliament, by such as are commonly (but unjustly) called Brownists*. Its date is May 1645, and its subscription runs: 'The meanest and unworthiest servants of God the free Churches of Christ resident in and about this city' [London] (Manchester New College Library, Tract No. 55*a*). In the Lambeth Library (40.2.24) is a pamphlet of 1640 entitled 'Information for the Ignorant. . . . Containing a few observations upon 1 Cor. 10, which do strongly prove it to be absolutely sinful to hear the word preached in any false estate or assembly whatsoever.' To which is added (in a P.S.) a 'Public challenge made by N.E. to all the Nonconformists or Reformists in Old and New England and Holland in the behalf of the total Separation.'

†† See *More Work for the Dean* (1681), by Thomas Wall, an answer to Stillingfleet's *History, Nature, and Pleas of the Present Separation from the Church of England*, strongly defensive of Barrow, Greenwood, and Peury, whose cause is said to be still that of 'many thousand Protestants' in England.

LITERATURE.—i. *BROWNE'S WRITINGS.*—A list of these so far as known up to April 1906 is printed in Champlin Burrage, *The True Story of Robert Browne* (1906), p. 74 f. The most important are those numbered: (3) *A Booke which sheweth the life and manners of all true Christians*, Middelburg, 1582; (4) *A Treatise of Reformation without tarying for anie*, Middelburg, 1582, reprinted by Congregational Historical Society, 1903; (5) *A Treatise upon the 23 of Matt.*, Middelburg, 1582 or early in 1583 (a satisfactory account of these, with full titles, is given by Burrage, pp. 17–25); (8) *A True and Short Declaration both of the gathering and joyning together of certaine persons: and also of the lamentable breach and division which fell amongst them*, Middelburg, ?1, 1583?; (18) *An Answer to Mr. Cartwright's Letter for joyning with the English Churches*, 1584–85 (?) (MS printed and published at London, before Oct. 7, 1585); (19) *A Reproofe of certaine schismatical persons and their doctrine touching the hearing and preaching of the Word of God* (MS of 31 folio pages, 1588 [?], discovered by Burrage at the Lambeth Library in 1905 and since published [London, 1907] as the *Retractation of Robert Browne, Father of Congregationalism*). The schismatical persons are taken to be Henry Barrow, John Greenwood, and their congregation. No doubt is expressed on this point—or any as to its authenticity. But the present writer is not convinced of the latter, at least. (22) *A Letter written to Mr. Flower*, Dec. 31, 1588–89 (MS in the B.M., published at London [Memorial Hall], 1904, under the title *A New Year's Guift*; the printed copy contains a narrative of the finding of the MS by Burrage in 1901).

ii. *BROWNE'S LIFE.*—All previous biographies are superseded by Champlin Burrage, *The True Story of Robert Browne*, Oxford, 1906, together with two papers in *Transactions of the Congregational Historical Society*—'Robert Browne's Ancestors and Descendants' (vol. ii. No. 3) and 'New Facts Relating to Robert Browne' (vol. ii. No. 4)—both by F. Ivas Cater. Dexter's study of Browne, however, in his *Congregationalism of the last three hundred Years, as seen in its Literature* (1879), pp. 61–128, is still valuable.

iii. *EARLY BROWNIST LITERATURE.*—The words of Robert Harrison (d. 1585?), Henry Barrow (1550–1593), John Greenwood (d. 1593), John Peury (1559–1593), Henry Ainsworth (1571–1622), Francis Johnson (1562–1618), John Robinson (1576?–1625), Henry Jacob (1563–1624), for which see Dexter, *Congregationalism of the last three hundred Years* (Bibliography, pp. 8–32), and T. G. Crippen, 'Early Nonconformist Bibliography' in *Transactions of Congregational Historical Society*, vol. i. Nos. 1, 2, 3.

iv. *MODERN LITERATURE.*—Histories of Congregationalism, *passim*, particularly Dexter, *op. cit.*; R. W. Dale, *Hist. of Eng. Congregationalism*, 1907; E. Arber, *Story of the Pilgrim Fathers*, 1897; J. Brown, *Pilgrim Fathers of New England*, 1895; F. J. Powicke, *Henry Barrow*, 1900; W. Walker, *Creeds and Platforms of Congregationalism*, 1893; A. Mackennal, *Story of the English Separatists*, 1893, and *Sketches in the Evolution of English Congregationalism*, 1901.

FRED. J. POWICKE.

BRUNO.—I. Life.—Giordano Bruno was born in 1548 in the ancient township of Nola, not far from Naples. At the latter town he studied, and in 1563 he entered the monastery of the Dominican order there as novice. It was at this time that he took the name of Giordano, his original name having been Filippo. In 1572 he became priest. Early in his monastic career charges of heresy had been brought against him, and these were renewed in 1576. Bruno escaped to Rome, and thence, hearing of his excommunication, made his way to North Italy. Earning a livelihood by various means and in various cities, he finally crossed the Alps, and in 1579 reached Geneva. There he attended the Protestant services held by an Italian pastor, and thus became formally a member of the Protestant community, although he does not seem to have entered into full communion or to have adopted the Calvinist confession of faith. A violent dispute with a Professor of Philosophy at the Genevan Academy led to his departure from the city in the autumn of the same year. He passed to Lyons and thence to Toulouse, where for two years he lectured on Aristotle and other subjects, being elected (by vote of the students) to a chair at the University. We next find him at Paris, in one of the Colleges of which he lectured (as extraordinary professor). Here he published two works on the Art of Memory (a subject concerning which he had been interviewed by the king, Henry III.), and a curious comedy, *Il Candelaio*. Apparently he fell into disfavour at the University, and in 1583 he crossed the Channel and came to London. There, after a three months' stay in Oxford, where his reception was the re-

verse of cordial, he took up his abode in the house of the French Ambassador, Mauvissière, probably as a secretary, and remained till 1585, when the Ambassador returned to Paris. During his stay in London, Bruno had some acquaintance with Sir Philip Sidney (to whom he dedicated a number of his writings), Fulke Greville, Florio, and others of the literary men and courtiers of the time. Seven of his most important works, six being written in Italian, were published in London at this period, although false names are usually given on the title-page for the place of publication. These works included the dialogues *La Cena de le Ceneri* (1584), *De la Causa* (1584), *De l'Infinito* (1584), *Spaccio de la Bestia Trionfante* (1584), and *De gli Eroici furori* (1585). At the same time he had already begun the Latin works which were completed in Germany, so that his stay in England represents a period of extraordinary productiveness. With Mauvissière he returned to Paris in October 1585, but was compelled to leave it again in the following summer.

At this time he made an attempt at reconciliation with the Church, his hope being that he might be allowed to return without renewing his monastic obligations. The negotiations were broken off, however, and he made his way to Protestant Germany, settling for another brief period at Luther's city of Wittenberg. Here he associated with the then dominant Lutheran or Reformed Church party, was welcomed by the University, lectured on such subjects as the *Organon* of Aristotle and Lullism—avoiding dangerous topics—and continued his philosophical writings. With the overthrow of the Lutheran by the Calvinist party in 1588 he was compelled once more 'to take to the road.' With varying fortunes he visited Prague, Helmstadt, Frankfort, Zürich, and again Frankfort, where he remained from March 1591 till a fatal chance led him to Italy in the autumn of the same year. During this period he published various works: the *120 Theses adv. Peripateticos* (Paris, and also Wittenberg), the *Oratio Valedictoria* at Wittenberg, the *Oratio Consolatoria*, or Funeral Address on Duke Julius, at Helmstadt, and two mathematical writings at Prague. The Latin poems (with prose commentaries), which contain the sum and final statement of his philosophy, the *De Minimo*, *De Monade*, and the *De Immenso*, were published at Frankfort along with a mnemonic work, the *De Imaginum Compositione*, in 1591. In response to an invitation of the patrician Mocenigo, who wished to learn his art of memory and his supposed magical powers, Bruno re-entered Italy in August 1591.

He was again anxious to be reconciled to the Roman Church, and to be allowed to live and write at peace as a layman, being curiously unconscious of the reputation his writings had built up for him. No doubt he trusted also to Mocenigo's influence for protection. In May 1592, Mocenigo, who had not obtained the secret knowledge he expected, denounced him to the Inquisition at Venice. In the process that followed Bruno at one point made solemn abjuration of all errors and heresies of which he had been guilty, and later made entire submission, throwing himself on the mercy of the court. Meantime, however, Rome had intervened, demanding that the heretic be sent to the Papal court. For political reasons Venice yielded, after considerable dispute and under strong pressure; and in February of 1593, Bruno entered the prison of the Inquisition at Rome. For some unknown reason no further steps were taken till January 1599—a most unusual delay. The process was then renewed and carried on to December of that year; but the unfortunate man, refusing to recant any of his philosophical opinions, or to acknowledge the right of the Church to dictate in matters of philosophy, was condemned to death in the usual cynical formula, and, on 17th Feb. 1600, was publicly burnt alive in the Campo dei Fiori, where the statue by Ferrari now stands. Bruno suffered not for the Protestant religion or indeed for any form of religion, but for Science, and for the freedom of the scientific spirit from the Church.

2. Works.—Apart from the comedy of *Il Candelaio*, and one or two occasional works such as the Orations at Wittenberg and at Helmstadt, Bruno's works fall into three groups, viz. (1) commentaries and summaries; (2) works on the Art of Memory and the Art of Knowledge; (3) philosophical works.

(1) The first group includes expository and critical accounts of Aristotle's *Physics*, the posthumous collections *De Magia*, the *Medicina Lulliana*, and perhaps a number of the accounts of the Lullian Art of Knowing. (2) Such works as the *De Compendiosa Architectura* (1582), the *Lampas Combinatoria* (1587), and the posthumous *Lampas Triginta Statuarum* present in various forms a scheme, based on the writings of Raymond Lully (13th cent.), for the analysis of thought, and its reduction to a few elementary concepts, from which, with their combinations, all possible knowledge might be discovered, retained, and imparted. Leibniz also, and others after him, devoted some attention to this idea of a Universal Art of knowing or discovering truth by thought alone, or, more strictly, by the manipulation of words. Along with these works may be placed the *De Umbris Idearum* (1582), *Cantus Circaeus*, *Sigillus Sigillorum* (1583), and other works on the Psychology and supposed Art of Memory, upon which Bruno laid great stress, but to which the familiar criticism applies, that what is good is old, and what is new is worthless. (3) The main philosophical works, Italian and Latin, have been enumerated above under their short titles; there remains to be added only the *Summa Terminorum Metaphysicorum* (1609, the first part having been previously published by itself in 1595). The *Cena* introduces us to the Copernican theory of the universe, and Bruno's extension of it; the *Causa* gives the metaphysical basis; the *Infinito* places the new cosmology in a fuller light, and criticizes the prevailing theory and its Aristotelian origins; the *Spaccio* and *Cabala* (1584) deal with the ethics and religion of the common man; while the *Eroici furori* give those of the speculative philosopher, imbued with the true *amor Dei intellectualis*. Finally, in the Latin poems the system receives unity and finish; its relations with, and its advantages over, previous theories are expressed in clear and dignified, if not inspired, verse. There is no doubt also that in these later works Bruno comes nearer to a spiritual Monadism such as that of Leibniz, while in the earlier writings he teaches rather a Pantheism of a Neo-Platonic type.

Bruno has been called the Philosopher of Astronomy (Riehl, p. 28). What is new in his teaching is his whole-souled adoption of the theory of the universe foreshadowed by Copernicus, and already in Bruno's time being established by the astronomical discoveries and calculations of Tycho Brahe, Kepler, Galileo, and others. Early in his studies he became dissatisfied with the prevailing philosophy of the Church,—Aristotelianism,—and turned with fresh interest to the cosmic speculations of the pre-Aristotelian thinkers, and to the mystical imaginations of the Neo-Platonists. These, with the Scholastics, orthodox and unorthodox, the alchemists, the astrologers, and finally Cardinal Nicolaus of Cusa, last of the

Mediævals and first of the Moderns, were the chief influences that determined Bruno's thought, and gave his philosophy its strange confusion of old and new, of crass superstition and daring speculation, of dull pedantry and vivacious originality, of ignorant folly and supreme insight.

(*a*) *The physical universe.*—The universe is infinite, without bounds, everywhere the same in nature or kind, everywhere diverse in its individual forms or modes. Its centre is at once everywhere and nowhere; it is all centre or all circumference; or again its centre is relative to the spectator; thus to us the earth appears the pivot about which the universe revolves, but in precisely the same way, said Bruno, the inhabitant of the moon would regard the moon, and the inhabitant of the sun the sun, as the centre of his world. Each sun, each star, each planet is a world like our earth, with living beings in its air, on its soil, in its fire and its waters; but the worlds are of two kinds, each complementary to each, each necessary to the other's existence; the two kinds are the suns, including the fixed stars, and the earths or planets, including the comets. The latter revolve about the former, as the earth about the sun, but the suns themselves are also in motion. Nowhere is there any permanence or fixity in Nature; all these worlds are alive, are living beings, and the condition of life is change. Permeating the whole universe is the ether, which Bruno thought of as a formless fluid, a passive, yielding, yet unchangeable, medium through which light, heat, and bodies pass without loss of force. Underlying all movement, small or great, is spirit or soul; all things have soul; the ether itself Bruno sometimes identifies with the Soul of the Universe. Again, since Nature is everywhere the same, everything is implicitly or potentially the whole universe; and what it is implicitly it strives to become explicitly or in actuality. Thus every *element* passes, in the course of its history, through every portion of the universe, and every *composite being* becomes, by gradual change, every other nature or thing. Thus suns and earths, like all other beings, have had a beginning in time and will decay and perish in time. Nature never repeats herself; that is, there are never at a given moment of time two forms or things exactly alike, and nothing is ever for two successive moments the same: nowhere is there a perfectly straight line or a perfect circle or arc of a circle. There are three kinds of monads, *i.e.* of simple substances or elements, according to Bruno: (1) God, the Supreme Unity, Monad of Monads; (2) the soul, the substance or spirit of the composite body; and (3) the atom, the simple element of body or matter. All are immortal, each soul passing, as has been said, through every type of body the universe contains. In this metempsychosis there is, however, a possibility of progress; the soul has it in its power to rise gradually to higher and higher types of being, until it approaches unity with God and is absorbed into the eternal life of the Divine being.

(*b*) *God and Nature.*—Relatively to us God has two modes of existence and two ways of access. As a transcendent Being, outside of and prior to the universe, its Creator and Source, He is accessible only to faith through revelation; He cannot be approached by reason or by thought. As an immanent Being, the soul, spirit, or inner nature of the universe, which is His image or expression, He is knowable by sense, understanding, and reason in gradual approximation. As the soul of the universe He is in all and every part; all things are one, and the one is God. Indeed, in the earlier phase of Bruno's Pantheism the individual or finite being has no real existence at all; it is not a part or a division or even a special mode or expression of the Divine or world-soul; it is simply the world-soul itself in a particular aspect. Again, in the infinite (*sub specie aeternitatis*, in Spinoza's phrase), there is neither less nor greater; a man is no higher, no nearer God than an ant, a star than a man; all values are relative to the finite standpoint. In the Infinite, as Nicolaus of Cusa taught, all opposites, including good and evil, coincide; liberty and necessity, the possible and the actual, power and will, will and thought or idea, all these in God are one. Hence the universe that exists is the *only possible* universe, and because it exists it is also a *perfect* universe. But again Bruno's maturer thought compelled him to recognize gradations in value, in spite of himself. In law, natural and moral, in the beauty and order of Nature, God is more fully, more adequately, expressed than in any single being or individual thing (*Op. Lat.* i. 2, p. 316).

(*c*) *Ethics and religion.*—The end and aim of a Church is the same as that of a State; it is social and practical—the security of the community, the prosperity and well-doing of its members. Dissension and strife are dangerous to the State, hence the need of an authoritative doctrine, and the enforcement of its acceptance and of outward conformity with it; but the Church has no right to go further, to interfere with the pursuit of knowledge, of truth, which is the object of philosophy or science. Thus the Bible teaches not science but morality, an ideal of conduct. No discovery therefore may be condemned because it conflicts with a supposed statement of fact in the Bible. God does not need the worship of men, He cares nothing for what they say or think of Himself, but only for what they do to each other, *i.e.* for their happiness. Thus all worship, all religion has a purely practical and human end. The ordinary man must be governed by authority, by fear of punishment, whether in this life or in the next; ignorance and bodily pleasures are his paradise. He must live by faith. But the wise or heroic soul is able to attain, through reason, and through the love with which it is inspired, to the knowledge of and to eternal union with the Divine. Thus Bruno comes in the end to the same conception as that with which Spinoza concluded his Ethics—the *amor Dei intellectualis*. His philosophy of religion is a rationalism, but limited always by a belief in the Transcendence of God, by which the sphere of faith is separated from that of reason, and indeed remains, as Bruno sometimes saw, above it.

3. **Influence.**—Although his writings were placed upon the Index in 1603 and became very scarce, and although in his lifetime he aroused antagonism wherever he went, Bruno nevertheless had many followers in England, in France, and in Germany. No doubt his Lullian works formed the first attraction, but through them his philosophical ideas received an entrance into current thought. The influence was general rather than special; the courage, independence, and enthusiasm with which he defended the new and lofty conception of the universe and of Nature in its relation to God made themselves felt and were imitated. Traces of his teaching may be found in Bacon, in Descartes, and above all in Spinoza and Leibniz, with both of whom he has many doctrines in common. Except, however, for the somewhat mistaken admiration of the English Deists, he was generally neglected until the German idealists re-discovered him in the first half of the 19th century. Ample amends has now been made by his countrymen in the study of his writings, their careful editing, and complete publication; and a multitude of monographs upon his life and phil-

osophy have appeared during the last thirty years in various languages.

BRYANITES.—See METHODISM.

BUDDHA, LIFE OF THE.—Gautama, the Buddha (Pāli *Gotama*), the founder of the Buddhist faith, which at one time numbered in all probability more adherents than any other form of religious belief, was born in or about the year 560 B.C., in the Lumbini Grove, near the ancient town of Kapilavastu, the ruins of which lie hidden beyond the British border in the dense *tarai* region of south Nepāl, a few miles north of the Basti District of the United Provinces. The place of his birth, unknown and unidentified before, was determined by the discovery, in the year 1895, of a pillar erected there by the Buddhist Emperor Aśoka (*q.v.*) during a pilgrimage which he undertook for the purpose of visiting and worshipping at the chief sites made sacred by the presence and acts of the Buddha while he lived upon earth. The route which he followed led him from his capital city of Pāṭaliputra (Patna [*q.v.*]) to the Lumbini Grove and Kapilavastu, Bodh Gayā, Sārnāth, near Benares, Śrāvasti, Kuśanagara, and other sacred sites, the exact position of some of which is still uncertain; and at each place he appears to have set up a pillar or built a *stūpa* commemorative of his visit and of the incident in the Buddha's life of which it had been the scene. The inscription on the Lumbini Grove pillar is perfect, and the letters as clear and legible as on the day they were inscribed; of a few words, however, the meaning is uncertain:

'The king Devānampiya-Piyadasi, when he was twenty-years-anointed, did [*this place*] the honour of coming [*here*] in person. Because Buddha was born here, the Sakya saint, he caused a stone surrounding and screening wall to be made, and a stone pillar to be set up. Because the Blessed One was born here, he made the village Lummini free of rent and entitled to the [*king's*] eighth share [*of the grain*].'*

The name *Gautama*, by which the future Buddha was known, is perhaps derived from that of Gotama, the ancient *ṛṣi*, or seer, to whom are ascribed some of the hymns of the Rigveda. He becomes *buddha*, or *the Buddha*, the 'enlightened' or 'wise,' only after his attainment of perfect wisdom under the Bo-tree. Other titles given to him are *Śākyamuni*, 'the sage of the Śākyas'; *Siddhārtha*, 'he who has accomplished his aim'; and *Tathāgata*, 'he who has arrived at the truth.' His father was named Śuddhodana, the chieftain or prince of a Śākya clan, who ruled from Kapilavastu over a small kingdom in the N.E. part of the United Provinces and the neighbouring District of southern Nepāl; and his mother, Māyā or Mahāmāyā, is said to have conceived him after a dream in which she beheld the future Buddha descending from the heaven, and entering her womb in the form of a white elephant. Hence the elephant is sacred to all Buddhists. Māyā herself, according to the tradition, died within seven days after the birth of her son, and was carried to the *Trayastriṁśa* heaven of Indra, whither the Buddha himself ascended later, to give her instruction in the Law.*

In the *Jātaka* (*q.v.*) the story of the life and experiences of the Buddha in his earlier existences is narrated, and how the characteristics and perfections of a Buddha were exhibited by him in patience, self-sacrifice, and the other virtues. As the time drew nigh for him to enter the world in this the final birth, the gods themselves prepared the way before him with celestial portents and signs. 'Earthquakes and miracles of healing took place; flowers bloomed and gentle rains fell, although out of season; heavenly music was heard, delicious scents filled the air, and the very water of the ocean lost its saltness and became sweet and refreshing.' Before his birth also the prophecy was uttered concerning him, that he would become either a Universal Monarch (*chakravartin*), or, abandoning house and home, would assume the robe of a monk, and become a Buddha, perfectly enlightened, for the salvation of mankind; and he himself, in the *Tuṣita* heaven, before consenting to undertake the office, makes the 'five great observations,' in order to determine the right family in which to be born, the right continent,† the appropriate district,‡ the proper time, and the predestined mother of the Buddha. He is accordingly conceived in the womb of Queen Mahāmāyā, and she is delivered of a son in the Lumbini Grove, under the shade of a Sāl-tree, a branch of which bends down to her, that she may grasp it with her hand. The body of the child bore at birth the thirty-two auspicious marks (*mahāvyañjana*) which indicated his future greatness, besides secondary marks (*anuvyañjana*) in large numbers. The chief of the divinities, including Indra, were in attendance, and the boy was received by four Brahma angels. Immediately also he uttered the 'shout of victory,'§ taking seven steps forward, and finding in none of the ten directions a being equal to himself. At the same moment his future wife was born, and also the sacred Bo-tree, under which he was destined to attain Buddhahood.

In many of the legends the young Gautama performs marvellous feats of strength. His father also, mindful of the prophecy that he would retire from the world, surrounded him with all manner of luxury and indulgence, in order to retain his affections, and prevent him from undertaking a vow of solitariness and poverty. In particular, he endeavoured to keep from him the 'four signs,' the sight of which, it had been announced, would move him to enter upon the ascetic life.

'Then said the king, "What shall my son see to make him retire from the world?"

"The four signs."

"What four?"

* The translation is that of J. F. Fleet in *JRAS*, 1908, p. 486; cf. p. 823, and *ib.* 1909, p. 760 ff.; V. A. Smith, in *IA* xxxiv. [1905], p. 4, gives a rendering that differs only in details. For a facsimile and transcription see G. Bühler, *Epigr. Ind.* v.; V. A. Smith, *Aśoka* (1901), p. 145, etc. Earlier articles and discussions will be found in *JRAS*, 1897, *et al.*, and in the references in V. A. Smith, *op. cit.* Not far from the Lumbini (Rummindei) pillar there was found, near the village of Nigliva, a second pillar of Aśoka, with an imperfect inscription recording his visit to the *stūpa* of Koṇāgamana (Skr. *Kanakamuni*), one of the four Buddhas of the present age (Kakusandha, Koṇāgamana, Kassapa, and Gautama himself; Warren, *Buddhism in Translations*, p. 82 *et al.*; V. A. Smith, *op. cit.* p. 145). Other pillar-inscriptions are known; see art. AŚOKA.

* Rockhill, *Life of the Buddha*, p. 80 f.; Warren, *op. cit.*, p. 42 ff. The story of the virginity of Māyā, the mother of the Buddha, is late, and owes its inspiration, it can hardly be doubted, to Christian sources. According to L. de la Vallée Poussin, the doctrine is asserted in the *Mahāvastu* (*q.v.*) but not elsewhere (cf. above, p. 741b and note ‡).

† 'In three of the continents the Buddhas are never born; only in the continent of India are they born.'

‡ *Madyadeśa*, the Middle Country.

§ In two of his previous existences the Buddha is said to have spoken at birth—the *Mahosadha* and *Vessantara* existences (see *Jātaka*, i. 53, quoted in Warren, p. 47). The ten directions are the zenith and nadir, with the four cardinal and the four intermediate points.

"A decrepit old man, a diseased man, a dead man, and a monk."

"From this time forth," said the king, "let no such persons be allowed to come near my son. It will never do for my son to become a Buddha. What I would wish to see is my son exercising sovereign rule and authority over the four great continents and the two thousand attendant isles, and walking through the heavens surrounded by a retinue thirty-six leagues in circumference." And when he had so spoken he placed guards for a distance of a quarter of a league in each of the four directions, in order that none of these four kinds of men might come within sight of his son.'*

On successive occasions, however, issuing from the palace, he is confronted by the four signs the sight of which fills him with amazement and distress; and, realizing the impermanence of all earthly things, he determines to forsake his home and take refuge in the forest for solitary meditation, and 'to obtain the highest immortality.' His resolution is strengthened by the appearance of the attendant women of the palace, whom he finds asleep in all manner of uncomely attitudes;† and he pays a final visit to his wife and child in the inner chamber, checking himself in his desire to waken and bid them farewell, lest their entreaties and caresses should avail to turn him from his fixed purpose. He is said to have been twenty-nine years old when he thus made the 'Great Renunciation.' On his horse Kaṇṭhaka he left the city by night, and miraculous signs accompanied his departure, in the same manner as when he had been born. The gods themselves silenced the neighing of his steed, lest the city and its warders should be aroused; and bore up the horse's hoofs, preventing them from touching the ground; while the city gates, heavy with bolts and bars, opened noiselessly to him of their own accord.‡ And Māra, the prince of evil, sought to win him back by the promise of universal dominion, which he should immediately obtain.

On the further side of a broad stream Gautama dismissed his horse and attendant, the latter seeking permission, which was refused, to remain with him;§ and the two returned to the city, to announce that their master had finally and for ever renounced the world. The prince himself proceeded alone and on foot to Rājagṛiha (Rājgir), whose king greeted him as the future Buddha, and obtained from him a promise that, after gaining enlightenment, he would re-visit his kingdom and give him instruction in the right knowledge. Thence he made his way to Uruvelā (Skr. *Urubilvā*, the great or wide-spreading Bel-tree, the wood-apple), a village or grove near Gayā, and there in the company of five ascetics entered upon a course of extreme self-discipline, carrying his austerities to such a length that his body became utterly emaciated and lost all its brightness and grace; finally, he fell down senseless and was believed to be dead. For six years the 'Great Struggle' continued, at the close of which, becoming convinced that the truth was not to be won by the way of asceticism, he resumed an ordinary course of life as a beggar living on alms. These six years are said to be 'like time spent in endeavouring to tie the air into knots.' His companions, however, the five ascetics, now deserted him, because they regarded his action as a proof of faithlessness to his principles, and departed to the Deer-Park at Benares.

There followed the assaults of Māra, who with his hosts endeavoured by every means, first by violence and then by varied allurements, to distract his attention and turn him from his purpose. Seated under the Bo-tree on a couch or platform of grass, on its eastern side and facing the east, Gautama remained steadfast and immovable, taking no notice of the showers of rocks and darts which, as soon as they reached him, turned into flowers. Here he resolved to remain—'Never from this seat will I stir, until I have attained the supreme and absolute wisdom.' The period of the temptation closed with sunset, when the army of Māra was finally driven off in utter defeat. During the following night, in deepest meditation, the desired knowledge and the perfect state were attained, and Gautama became *Buddha*, 'the enlightened one,' to whom all the secrets of the universe were laid open—omniscient.

'A legend relates that in the first night-watch he gained a knowledge of all his previous existences; in the second, of all present states of being; in the third, of the chain of causes and effects; and at the dawn of day he knew all things.'*

During the seven weeks spent under the Bo-tree, he is said to have been miraculously sustained on an offering of milk-rice, brought to him by a woman of Uruvelā, named Sujātā, and neither to have moved from his place nor to have taken any further nourishment. Until this time he had been merely a *Bodhisattva* (*q.v.*), one who is destined to gain supreme wisdom, on the way to Buddhahood but not yet perfectly enlightened.

For a discussion of the doctrine or truth which the Buddha thus believed himself to have grasped, and which he made it his business henceforth to preach, see art HINAYĀNA. 'All existence involves suffering; suffering is caused by desire, especially the desire for continuance of existence; the suppression of desire therefore will lead to the extinction of suffering; this deliverance can only be effected by the Noble Eight-fold Path.' These are the *āryasatyāni*, or Noble Truths, the four terms of which are *duḥkha*, 'pain'; *samudaya*, 'cause'; *nirodha*, 'suppression'; *mārga*, 'way' or 'path.' The same four truths or axioms are propounded in the Sāṅkhya philosophy (*Mahāvagga*, I. vi. 19; *SBE* xiii. 95 f., etc.; see also R. Garbe, *Sāṅkhya und Yoga*, Strassburg, 1896, p. 18, and art. SĀṄKHYA).

With regard to the events immediately succeeding the Buddha's attainment of omniscience, the traditions are more than usually divergent. That which is perhaps the best attested, and most generally finds expression in Buddhist art, represents him as spending in succession seven days under the Bo-tree, in deep meditation, 'enjoying the bliss of emancipation'; the same period under the 'Goat-herd's Banyan' (*ajapāla*), where a Brāhman is said to have approached him with the request that he would define the characteristics of a true Brāhman; the Buddha replied that he only could justly claim the name who was 'free from pride, free from impurity, self-restrained, wise, and who has fulfilled the requirements of holiness.' A third week was spent under the *Muchalinda*-tree, from beneath which Muchalinda, the serpent-king, came forth, and spread his hood as a canopy over the Buddha to protect him from the wind and heat, the storm-cloud and the rain; and, finally, a fourth period of equal duration was spent under the *Rājāyatana*-tree, whence he returned to the Banyan. Thus were completed four periods of seven days. During the last week, two merchants, moved by a divine suggestion, approached the Buddha, and with respectful salutations offered him food, rice-cakes, and honey. The gift was accepted, and received in a bowl (or four bowls of stone), presented to him at the moment by the four divinities that guard the four quarters of the globe.† The merchants declared their faith in the Buddha and his Law,‡ and begged to be received as disciples. Their request was granted, and they thus became the earliest lay-disciples in Buddhism.

After his return the Buddha is represented as

* *Jātaka*, i. 56, in Warren, p. 53. The story of the four signs recurs in all the narratives of the Buddha's early years (cf. *e.g.* *Buddha-Charita*, bk. iii.). It would seem to be one of the best-attested of the early traditions, as it is most characteristic.

† Cf. the description of Hanuman's visit by night to the palace of Rāvaṇa in Ceylon, finding his wives asleep (*Rāmāyaṇa*, v. 10); and the similar story of the noble Yasa (*Mahāvagga* i. 7).

‡ *Buddha-Charita*, v. 80 ff., etc.

§ According to one form of the tradition, the horse died of grief on the spot, and was re-born as a god in the *trayastriṁśa* heaven.

* Monier-Williams, *Buddhism*, p. 34; cf. Warren, p. 82.

† *Mahāvagga*, i. 2–4; cf. Warren, p. 83 ff.

‡ Employing the 'two-refuge' formula, because the *saṅgha*, the order of monks, was not yet instituted.

debating in his mind whether he should undertake the wearisome and thankless task of communicating to men the profound truths which he had thus perceived. Brahmā appeared to him, and with reverential obeisance recalled him to high office and duty, reminding him of the misery and ignorance of mankind, who, if they do not hear the doctrine preached, cannot attain to salvation. The Buddha assented; but a further doubt arose to whom he should first proclaim his doctrine with the assurance that they would understand. He decided that the five ascetics with whom he had previously lived in the practice of austerities should be the first to receive the new teaching. He therefore sought them out in the Deer-Park, *Isipatana*, at Benares, and to them delivered his first sermon, or brief exposition of doctrine, 'setting in motion the wheel of the Law,'* and founding 'the highest kingdom of truth.' The *bhikṣus* accepted the truth, and at their own request were duly ordained, becoming the first members of the Buddhist Order (*saṅgha*) of monks.

The number of the disciples rapidly increased; and Gautama sent forth his monks on missionary tours hither and thither, bidding them wander everywhere, preaching the doctrine (*dharma*), and teaching men to order their lives with self-restraint, simplicity, and chastity. Of these, his earliest converts, two of the most renowned were Sāriputta and Moggallāna (*Maudgalyāyana*), members of an ascetic community resident at that time at Rājagṛiha, who received the truth from the lips of the monk Assaji, one of the five original disciples; he taught them the substance of Buddhist doctrine, explaining that he himself, being only a novice, was unable to expound it at length.

'Of laws or principles that originate from a cause, the cause of these the Buddha hath declared, and also the destruction of them. Thus the great Teacher (Monk) hath spoken.†

The recitation of these words by the venerable monk Assaji is said to have aroused in the mind of the hearers a clear understanding of the fact that 'whatever is subject to origination is subject also to cessation or destruction.'‡ They were thereupon admitted into the Order by the Buddha himself. Both are recorded to have died before their Master. Other disciples, whose names and actions fill a large place in the early chronicles, were Upāli, who recited the text of the *Vinaya* at the first Council after the Buddha's death; Kāśyapa (Kassapa) or Maha-Kāśyapa, the president of the Council, for whose coming the cremation of the body of the Buddha was delayed; and Ānanda (*q.v.*), his cousin and favourite attendant, who seems to have watched over him during life with closest care, and to have been nearest to him at death. Others of high birth became lay-disciples. And there were also female followers, who, later, were permitted to form themselves into an Order of Buddhist nuns (see art. MONASTICISM [Buddhist]).

Thereafter the Buddha spent a life prolonged, according to the tradition, over forty-five years, in itinerating from place to place, and preaching the doctrine to all who would listen. The details of his journeyings, as recorded in the chronicles, are not of much interest; they seem to have been confined mainly to the kingdom of Magadha,* and especially the country around Rājagṛiha and Srāvastī;† but are traditionally said to have extended also far into the north-west of India and the Panjāb. During the whole of this period he appears to have had no settled dwelling-place, although gifts of land and buildings were made to him by wealthy disciples; the most extensive and important of these apparently were the Jetavana park and monastery at Śrāvastī—the gift of Sudatta or Anāthapiṇḍika, who bought it from Jeta, the king's son, at the cost of covering the ground with gold pieces. Jeta retained a portion, and built thereon a *vihāra* for the monks; whence the whole estate was known as *Jetavana*, the grove or park of Jeta. In the rainy season (*Vassa* [*q.v.*]) it was his wont to abstain from travelling, ostensibly lest the animal and insect life which then abounded should be inadvertently injured or destroyed; but partly also, no doubt, because of the physical difficulty which the heavy rains placed in the way of much movement.‡ The doctrines which he taught seem generally to have been received with approval, often with enthusiasm, although opposition was at times aroused. His chief rival was Devadatta, a cousin of the Buddha, who is represented as being jealous of his influence and popularity, and as repeatedly seeking to compass his death. Devadatta had been received into the Order at the time of a visit which Gautama paid to Kapilavastu in the sixth year of his ministry, but had never been a sincere believer. The final attempt which he made to poison the Buddha was frustrated, and he himself, for making a false profession of faith, fell down into hell, where he was condemned to remain for an entire world-cycle.

At the age of over eighty years, according to the tradition, at the close of a long life devoted to teaching and preaching, Gautama Buddha realized that the time drew near for him to die, to leave his disciples and his work, and to attain *parinirvāṇa*,§ final or perfect *nirvāṇa*.

The authoritative account of the death of the Buddha, as related by the Southern School of Buddhism, is contained in the *Mahā-Parinibbāna Sutta* of the *Digha-Nikāya*, the 'Book of the Great Decease,' translated by T. W. Rhys Davids in *SBE*, vol. xi.; Warren, pp. 95–110. See art. LITERATURE (Buddhist). The narrative from Tibetan sources is given by W. W. Rockhill, *Life of the Buddha*, pp. 132–147. The date of his death has been discussed at great length, and by many scholars. The Sinhalese reckoning, representing the tradition of the South, places the event in the year 544 or 543 B.C.; but it seems certain that this is too early. More than fifty years ago, Sir A. Cunningham (*Bhilsa Topes*, London, 1854), from a full consideration of all the available data, gave his decision for the year 477 B.C. Prof. Max Müller arrived at the same conclusion (*SBE* x.[2] p. xliii ff.; *History of Sanskrit Literature*[2], pp. 262 ff., 299), which was endorsed by Dr. Bühler. Others, as Westergaard and Kern, bring the time of his death down to a considerably later period, c. 370 B.C. The most recent essay in favour of a yet earlier date is by the Indian scholar P. C. Mukherji, who argues for the early part of the 6th century (see review in *JRAS*, 1900, p. 568 ff.). There can be little doubt that Sir A. Cunningham's date is very near to the truth. Dr. Fleet re-examines the whole question with great care in *JRAS*, 1909, pp. 1–34, endeavouring to determine the precise day of the year on which the Buddha died, which he concludes to have been Oct. 13th, 483 B.C. Cf. also M. de Zilva Wickremasinghe in *Epigr. Zeylanica*, i. 142 n. 7, 156 f.

Accompanied by Ānanda, the Buddha then came

* *Dharmachakrapravartana* (Pāli *Dhammachakkappavattana*); see *SBE* xiii. 94 ff., and the references there given; Kern, *Indian Buddhism*, p. 23. The wheel is a continually recurring symbol in Buddhist art; the original intention probably was to represent as well the perfection of the doctrine, the circle denoting all-rounded completeness, as its unceasing, unresting progression. The sermon itself, as given in the texts, is a manifesto of Buddhist doctrine, inculcating the avoidance of the two extremes of a life of sensual pleasure or of ascetic self-mortification, and urging the pursuit of the 'Middle Path' which leads to insight, supreme wisdom, and nirvāṇa.

† *Ye dharmā hetu-prabhavā hetum teṣām Tathāgataḥ hy avadat teṣāñcha yo nirodha evaṁ-vādī Mahāśramanaḥ*—the Buddhist creed or confession of faith. (Cf. *SBE* xiii. 144 ff.; Kern, p. 25; Warren, pp. 87-91.)

‡ *Mahāv.* i. 23; cf. Warren, p. 87 ff.

* Beal, *Siyuki*, ii. 82 ff.; cf. art. MAGADHA.

† Legge, *Fā-Hien*, p. 55 ff.; Beal, *op. cit.* ii. 1 ff. The site of Śrāvastī was identified by Cunningham with Sahet Mahet, in the Gonda District of the United Provinces, and this identification has been confirmed by recent discoveries (see *JRAS*, 1908, pp. 971 ff., 1098 f., 1909, p. 1061 ff.; *IGI*, *s.v.*). There is a description of Śrāvastī from Sinhalese sources in W. Geiger, *Liter. u. Sprache d. Singhalesen*, Strassburg, 1901, p. 14 f.

‡ Vassa was also observed by the Jainas, and in this respect apparently both sects followed the earlier practice of the Hindu monastic orders.

§ Pāli *parinibbāna*, see art. NIRVĀṆA; *nirvāṇa* is a state attainable and attained during life, and was enjoyed by the Buddha himself and by many Buddhist saints; *parinirvāṇa* is reached only at death, with the dissolution of the bodily frame.

to the *Śāla*-tree grove *Upavartana* at Kuśanagara,* in the country of the Mallas. There, by his direction, a couch was spread between two *Śāla*-trees, with its head to the north, on which he lay down 'on the right side after the manner of a lion, and placing foot on foot remained mindful and conscious.' † The trees bloomed out of season, and scattered their flowers on him as he lay. His last hours were spent in giving counsels and directions to Ānanda and the assembled monks. Subhadra also, a wandering ascetic, was admitted to his presence, listened to his teaching, and was converted, thus becoming 'the last disciple made by the Blessed One himself.' Finally, he invited his disciples to state any doubt or difficulty felt by them with regard to the teaching of the Buddha or the rules of the Order, that he might remove it; and bade them regard his Doctrine and Discipline as their teacher after he was gone. Three times the question was repeated:

'"It may be, brethren, that some brother has a doubt or perplexity respecting either the Buddha or the Doctrine or the Order or the Path or the course of conduct. Ask any question, brethren, and do not have to reproach yourselves afterwards with the thought, Our Teacher was present with us, but we failed to ask him all our questions."

And when he had thus spoken the brethren were silent.

. . . .

"It may be, brethren, that it is out of respect to the Teacher that ye ask no questions. Then let each one speak to his friend."

And when he had thus spoken the brethren were silent.

Then the venerable Ānanda spake to the Blessed One:

"How wonderful a thing it is, Reverend Sir, and how marvellous! Verily, I believe that in this whole assembly of the brethren there is not one brother who has any doubt or perplexity respecting the Buddha or the Doctrine or the Order or the Path or the course of conduct."

"With you, Ānanda, it is a matter of faith, when you say that; but with the Tathāgata, Ānanda, it is a matter of knowledge that in this whole assembly of the brethren there is not one brother who has any doubt or perplexity respecting either the Buddha or the Doctrine or the Order or the Path or the course of conduct. For of all these five hundred brethren, Ānanda, even the most backward has become converted, and is no longer liable to be born in a state of suffering, but is assured of final salvation."

Then the Blessed One addressed the brethren:

"And now, brethren, I take my leave of you; all the constituents of being are transitory; work out your salvation with diligence."

This was the last word of the Tathāgata.

Thereupon the Blessed One entered the first trance (*dhyāna*); and rising from the first trance, he entered the second trance; and rising from the second trance, he entered the third trance; and rising from the third trance, he entered the fourth trance; and rising from the fourth trance, he entered the realm of the infinity of space; and rising from the realm of the infinity of space, he entered the realm of the infinity of consciousness; and rising from the realm of the infinity of consciousness, he entered the realm of nothingness; and rising from the realm of nothingness, he entered the realm of neither perception nor non-perception; and rising from the realm of neither perception nor non-perception, he arrived at the cessation of perception and sensation.' ‡

The same process is then repeated in reverse order until the first trance is again reached. Thence he passes successively to the second, third, and fourth. And at the close it is said:

'And rising from the fourth trance, immediately the Blessed One passed into Nirvāṇa.'

In the Mahāyāna school of Buddhism a mystical doctrine of three bodies (*kāya*) of the Tathāgata is taught—the *dharmakāya*, or body of the Law, *sambhogakāya*, or body of perfect bliss, *nirmāṇakāya*, the illusory or apparitional body. The first is said to be discernible in the whole air of the Tathāgata, the second in the whole air of a Bodhisattva, the third in the air of different pious men. The underlying idea would seem to be that of completing the connexion, or chain of evolution, between the living earthly Buddha and his spiritual or mystical counterpart, invisible in the heaven.*

A curious tradition, the origin of which it is not easy to trace, represents the death of the Buddha as due to over-indulgence in 'dried boar's flesh,' † at a feast which Chunda, the blacksmith, had prepared for him and his disciples. Recognizing the danger of the dish, Gautama refused to allow the others to partake lest they should suffer injury, and gave orders that what was left over should be buried in the ground. In view of the Hindu aversion to a meat diet, or the taking of life in any form, it is hardly likely that the tradition is a mere invention of later times. It is more probable that the preparation consisted of some vegetable or root, perhaps truffles; a 'boar's delicacy,' or favourite food; or the name of some dish prepared for the feast may have been confused in course of time with 'boar's flesh' or 'pork.' The refusal to permit his disciples to share was then invented to exalt his magnanimity, and to account for the fact that he alone suffered after the meal. If this were really the case, his great age would itself be a sufficient explanation. It should be noticed also that in the Tibetan books no reference is made to the pork, although the last feast in the Buddha's honour is described as in the Pāli narratives.‡

The death of the Buddha, like his birth, was accompanied by signs and portents from heaven; and the spirits of the earth and sky united in lamentation with his disciples and the men of Kuśanagara. The Mallas of the town paid due honour to the corpse, with processions and garlands and music, for a space of six days. On the seventh the body was carried by eight of their chieftains to a shrine outside the city, on the east, where a funeral pyre was raised of sweet-scented woods. The Malla chiefs, however, were unable to set fire to the pile; and it was explained to them that the final ceremony of cremation must await the arrival of Kāśyapa, who with five hundred brethren was at that moment approaching Kuśanagara. When Kāśyapa reached the shrine, he saluted with reverence the Buddha's corpse, and with his companions passed thrice round the funeral pile, bowing down in homage. The pyre then spontaneously began to burn; and, after the flames had done their work, they were again miraculously extinguished.

The bones and relics that remained from the fire were claimed by the Mallas of Kuśanagara (Kusinārā), on the ground that the Buddha had died in their territory. Others, however, advanced claims to a portion; and the danger of strife was allayed only by the remonstrances of a Brāhman, Droṇa (Doṇa) by name, who, at the instance of the Mallas themselves, undertook to distribute the relics. An eightfold division was made, as follows: (1) Ajātaśatru, king of Magadha; (2) the Lichchhavis of Vaiśālī; (3) the Śākyas of Kapilavastu; (4) the Bulis of Allakappa; (5) the Koliyas of Rāmagrāma; (6) a Brāhman of Veṭhadīpa,§ whose name is not recorded; (7) the Mallas of Pāvā; (8) the Mallas of Kuśanagara. Further, the earthenware vessel (*kumbha*), in which the relics had been gathered together after cremation, was given to Droṇa himself; and to the Mauryas (Moriyas) of Pipphalīvana, who, after all the relics had been distributed, sent a message demanding a share, were granted the

* The scene of the Buddha's death has not been certainly identified; according to Fa-Hien, chs. xxiii., xxiv., it lay 25 *yojanas* east of Kapilavastu (cf. Beal, *Siyuki*, ii. 31 ff.). Sir A. Cunningham identified the site with the village of Kasiā, about 40 miles east of Gorakhpur, in the United Provinces, where there are extensive Buddhist ruins; but doubt is thrown on the correctness of his conclusions by recent discoveries and investigations. See V. A. Smith in *JRAS*, 1902, p. 139 ff.; J. F. Fleet, *ib.* 1906, p. 907 and note; J. H. Marshall, *ib.* 1907, p. 993 ff., with plate showing excavations at the great monastery; *IGI*, *s.v.* 'Kasiā.'

† The attitude and scene are represented from sculptures, *e.g.* in A. Grünwedel, *Buddhist Art in India*, 1901, p. 119 ff.

§ Probably represented, according to Dr. Vogel, by the ruins at Kasiā; see *JRAS*, 1907, p. 993 ff.

embers of the fire. Thus there were altogether ten portions, and over each a cairn (*stūpa*) was erected and homage paid. These buildings remained for many years centres of pilgrimage, and were visited not only by Buddhists of India, but by pilgrims from distant lands.* In one form of the narrative the Emperor Aśoka is said to have undertaken a re-distribution of the relics among 84,000 *stūpas*, which he built. One of the original *stūpas*, however, that at Rāmagrāma (5), he was unable to violate, being prevented by the spirits (*nāgas*) that watched over the cairn.

At Piprāwā (Piprāhavā, Piprāhwā), in the United Provinces, excavations were made some years ago in an ancient mound and relic chamber; and among the objects discovered was a large stone box, containing steatite vases (one of which bore a short inscription), pieces of bone, gold leaf, jewels, beads, etc. The inscription when read was understood to describe the relics enclosed in the vase as those of the Buddha himself; and it was inferred that these fragments of bone were the actual portions of the body of Gautama, preserved after cremation, over which was erected the *stūpa* which had now been re-discovered. Dr. Fleet, however, interprets the inscription differently; and understands it to refer, not to the founder himself, but to the Śākyas, his kinsmen, many of whom, according to the tradition, were massacred, and their city wholly or partially destroyed, in revenge for a slight put upon the neighbouring king of Kosala.† In either case the inscription would seem to carry with it the identification of Piprāwā with Kapilavastu, the capital of the Śākyas.

The discovery is also reported of the ancient *stūpa* built near Peshāwar, according to the reports of the Chinese pilgrims, by Kanishka,‡ which they describe as the finest in India. Buddha himself, when travelling in the country, is said to have prophesied to Ānanda that on that spot, four hundred years after his death, a king named Kanishka would raise a great *stūpa* in his honour, 'which will contain many various relics of my bones and flesh.'§ Many marvels are related concerning the fulfilment of the prophecy, and both Fa-Hien and Hiuen-Tsiang record the presence in former times of the almsbowl (*pātra*) of Buddha in that country. Two large mounds lying east of the city have been identified as the site of the great building erected by Kanishka, and excavations have been carried on for the last two years, under the direction of the Archæological Survey of India. Under one of the mounds were found 'remains of an enormous monument, which proves to be the lost pagoda, so minutely described by the Chinese travellers.'‖ In a relic-chamber was discovered a casket containing small fragments of bone, which may therefore be portions of the remains of Gautama himself. The magnificence of the monument indicates the importance attached to the sacred relics which it was intended to enshrine. And the tradition recorded by Hiuen-Tsiang proves that in his day they were believed to be actual relics of the Founder of Buddhism.

* *Parinibbāna Sutta*, vi. 51–62.

† *JRAS*, 1906, p. 150. Dr Fleet reads the text, and translates as follows: *Sukiti-bhatinaṁ sa-bhagiṇikanaṁ sa-puta-dalanaṁ iyaṁ salila-nidhane Budhasa bhagavate sakiyanaṁ*, 'Of the brethren of the Well-famed One, together with (their) little sisters (and) together with (their) children and wives, this (is) a deposit of relics; (namely) of the kinsmen of Buddha, the Blessed One.' Earlier interpretations understood the reference to be to a relic-shrine of the Buddha himself, set up by his Śākya brethren. See Fleet's article, *loc. cit.*, in which he discusses the inscription; and for a description of the original discoveries, *ib.* 1898, p. 574, etc.; Mukherji, *Antiquities in the Nepalese Tarai*, 1897; cf. Fleet in *JRAS*, 1905, p. 679 ff.; and on the identification of Kapilavastu, W. Vost, *ib.* 1906, p. 553 ff.

‖ *Times*, 17th Aug. 1909; see *JRAS*, 1909, p. 1056 ff.

Among the prophecies uttered by the Buddha was one concerning the future of the religion which he established, and its ultimate decline and disappearance from the earth. The declaration is contained in the *Anāgata-Vaṁśa* ('Narrative of Coming Events'), and was given at Kapilavastu in response to a question by Sāriputta. The history of the future Buddha, Maitreya (Pāli *Metteyya*), is described; then at long intervals after his own death will occur the 'five disappearances': of the attainments, when his disciples will rise to ever higher degrees of sanctity; of the method, when the knowledge of the precepts and the way of salvation shall be lost; of learning, when the sacred texts themselves shall be forgotten; of the symbols, the monastic robe, bowl, etc.; and at the close of five thousand years 'the relics will begin to fail of honour and worship, and will go wherever they can receive honour and worship. But as time goes on they will not receive honour and worship in any place. Then . . . the relics will come from every place . . . and having congregated together at the throne under the great Bo-tree . . . will teach the Doctrine. Not a single human being will be found at that place; but all the gods from ten thousand worlds will come together and listen to the Doctrine, and many thousands of them will attain to the Doctrine. . . . Then they will weep, saying, "From henceforth we shall be in darkness." Then the relics will put forth flames of fire and burn up . . . without remainder.'*

[The subject of Barlaam and Josaphat, which was referred to this article by a cross-reference at BARLAAM, it has been found more convenient to treat in a separate article under the title JOSAPHAT.]

A. S. GEDEN.

BUDDHAGHOṢA.—This was the name of several members of the Buddhist Order. It will be sufficient here to deal with the best known among them, the celebrated author and scholar who flourished early in the 5th century A.D.

I. Life.—The authorities regarding the life of Buddhaghoṣa the Great are as follows. In the first place, certain important portions of his works have already been published. The few details they contain as to the life of the author are the only contemporary records of it that have survived. Secondly, Dhammakitti, in the middle of the 13th cent. A.D., wrote a continuation of the *Great Chronicle* (tr. in Turnour's *Mahāvaṁśa*, p. 250 ff.) of Ceylon. In it he inserted an account, in thirty-three couplets, of the life and work of Buddhaghoṣa. It is not exactly known from what sources this account was drawn; but it probably gives

* Warren, pp. 482–485.

the tradition as preserved at the Great Minster in Anurādhapura (*q.v.*) in written documents now no longer extant. Thirdly, we have a life of Buddhaghoṣa, written in Pāli, in the middle of the 16th cent., by a Burmese *bhikṣu* named Mahā Maṅgala. It is of a legendary and edifying character, and of little independent value. The title is, *Buddhaghos-uppatti* ('Advent of Buddhaghoṣa'); and the text has been edited and translated by James Gray. The results to be obtained from these sources will best be stated chronologically.

In the introductory verses to his commentary on the *Digha* (ed. Rhys Davids and Carpenter), Buddhaghoṣa says that he compiled it in accordance with the opinions of the Elders at the Great Minster; and that since he had already, in his *Visuddhi Magga* ('Path of Purity'), dealt with certain points, he would omit these in his commentary. Lastly, he says that the authorities on which he relied were in the Sinhalese language, and that he reproduces the contents of them in Pāli. In his commentary on the *Vinaya* (quoted *JRAS*, 1871, p. 295) he gives the names of some of these Sinhalese works. They are the Great Commentary, the Raft Commentary (*i.e.* written on a raft), and the Kurundī Commentary (*i.e.* the one written at Kurunda Veḷu). In his commentary on the *Parivāra*, Buddhaghoṣa states (*teste* Gray, p. 12) that he studied these three under Buddhamitta. In his *Attha-sālinī* (ed. Müller), Buddhaghoṣa also quotes as his authorities these and other commentaries written in Sinhalese; refers frequently to his own *Visuddhi Magga*, and twice at least to his commentary on the *Vinaya*; and mentions otherwise (apart from the canonical works) only the *Milinda* and the *Peṭakopadesa*.*

These meagre but important details show conclusively that Buddhaghoṣa worked at a date subsequent to that of the two books last mentioned, under the auspices of the scholars at the Great Minster in Ceylon, and on the basis of materials written in Sinhalese.

The authority next in point of date explains how this was supposed to have occurred. It tells us that, during the reign in Ceylon of Mahā-Nāma (who ascended the throne A.D. 413), there was a young Brāhman born in India who wandered over the continent maintaining theses against all the world. In consequence of a discussion that took place between him and Revata, a Buddhist *bhikṣu*, he became interested in Buddhist doctrine, and entered the Order that he might learn more about it. It was not long before he became converted, and wrote a treatise entitled *Ñāṇodaya* ('Uprising of Knowledge'); and also an essay entitled *Attha-sālinī* ('Full of Meaning'), on the *Abhidhamma* manual included in the Canon under the title *Dhamma-saṅgaṇi*. On Revata observing that he contemplated a larger work, he urged him to go to Anurādhapura, where there were better materials and greater opportunities for study, and make himself acquainted there with the commentaries that had been preserved in Sinhalese at the Great Minster, with a view to re-casting them in Pāli. Buddhaghoṣa agreed to this, went to the Great Minster, studied there under Saṅghapāli, and when he had mastered all the subjects taught, asked permission to translate the commentaries. The authorities of the School gave him two verses as the subject of a thesis, to test his ability. What he submitted as this thesis was the work afterwards to become so famous under the title of *Visuddhi Magga*. This proved, with the assistance of good fairies, so satisfactory that his request was granted. Then, according to the chronicler, 'he translated the whole of the Sinhalese commentaries into Pāli.'

* See the references given in Mrs. Rhys Davids' *Buddhist Psychology*, pp. xx-xxv.

We need not take every word of this edifying story *au pied de la lettre*. We know, for instance, that it was not the whole, but only a part, though a very important part, of the Sinhalese commentaries that he reproduced in Pāli. Other scholars, some of whose names we know, while some are not yet known, reproduced other parts of it. The work was by no means a translation in the modern sense. It was a new work based on the older ones. And the intervention of the fairies (*devatā*) is only evidence of the curious literary taste of the time of the poet. But, in the main, the story bears the impress of probability.

The *Buddhaghos-uppatti* takes over this story, telling it with many flowers of speech and at greater length. It adds a few details not found in Dhammakitti's couplets, giving, for instance, the names of Buddhaghoṣa's father and mother as Kesī and Kesinī, and the name of the village they dwelt in as Ghosa. Both the authorities locate it at Gayā in Magadha, near the Bo-tree. The *Gandhavaṁsa* (*JPTS*, 1896, p. 66) adds that Kesī was the family chaplain (*purohita*) of King Saṅgāma. The *Saddhamma Saṅgaha* (*JPTS*, 1890, p. 55) gives the additional detail that Buddhaghoṣa worked at his translations in the Padhānaghara, an apartment to the right of the Great Minster. The Sinhalese chronicler concludes his account with the simple statement that Buddhaghoṣa, when his task was accomplished, returned home to India, to worship at the Wisdom tree. The Burmese authorities (quoted by Gray in his introduction) all agree that he went to Burma. This is merely a confusion between our Buddhaghoṣa and another *bhikṣu* of the same name (called more accurately Buddhaghoṣa the Less), who went from Ceylon to Burma towards the end of the 15th cent. (Forchhammer, p. 65).

2. **Works.**—The extant books written by Buddhaghoṣa would fill many volumes. Of these only one, and that one of the shortest, has so far been edited in Europe. The most important is probably the *Visuddhi Magga*, a compendium of all Buddhism, in three books: on Conduct, Concentration (or mental training), and Wisdom respectively. Henry C. Warren has published an abstract of this work (*JPTS*, 1891); and a complete edition, with translation, introductions, and notes, is in preparation for the Harvard Oriental Series. The rest are all commentaries. Those on the four great *Nikāyas*, on the *Abhidhamma*, and on the *Vinaya*, would each fill three or four volumes. A late authority, the *Saddhamma Saṅgaha* (*JPTS*, 1890, p. 56), gives 137,000 lines as the extent of these six works. Another late authority, the *Gandha-vaṁsa* (*JPTS*, 1896, p. 59), in giving a complete list of Buddhaghoṣa's works, mentions in addition commentaries on the *Pāti-mokkha*, *Dhammapada*, *Jātaka*, *Khuddaka Pāṭha*, and *Apadāna*, adding on p. 68 the *Sutta Nipāta*. This list probably errs both by excess and by defect. It does not include the *Attha-sālinī*, which we now know, from the edition published by the Pāli Text Society, to have been written by him, and it does include the commentaries on the *Dhammapada* and the *Jātakas*. Now we have before us the text of the introductory verses to each of these works. In each case the author describes the circumstances under which, and names the scholars at whose instigation, he undertook and carried out the work. In neither case is any reference made to Buddhaghoṣa. In both style and matter each of these books differs from the other, and from such portions of the works of Buddhaghoṣa as are accessible to us. In the similar cases of Nāgārjuna and Śaṅkara, works not written by them have been ascribed to famous writers. The tradition of Buddhaghoṣa's authorship of either of

the books above named has not as yet been traced back earlier than the 10th cent.; and, for the above reasons, it is at present very doubtful. A large number of short quotations from Buddhaghoṣa's commentaries have been printed by the editors of the various texts with which he deals; and sixty consecutive pages from the historical introduction to his commentary on the *Vinaya* have been edited by H. Oldenberg (*Vinaya*, vol. iii.). Rhys Davids and Carpenter have published one volume, out of three, of the *Sumaṅgala Vilāsinī*, his commentary on the *Dīgha*. And one complete work by him, the *Attha-sālinī* above referred to, has been edited by E. Müller. This turns out to be, not the essay under that title said by Dhammakitti to have been composed in India, but another work written in Ceylon subsequently to the *Visuddhi Magga* and the six great commentaries. It is doubtless an enlarged edition of the essay, and the latter has therefore not been preserved. Manuscripts of the undoubted works of Buddhaghoṣa, containing the texts, sufficient to fill some twenty-five volumes more, are extant in European libraries; and the Pāli Text Society, having completed its edition of the canonical works, is now engaged on the publication of these.

3. **General conclusions.**—Buddhaghoṣa's greatest value to the modern historian is due largely to the limitations of his mental powers. Of his talent there can be no doubt; it was equalled only by his extraordinary industry. But of originality, of independent thought, there is at present no evidence. He had mastered so thoroughly and accepted so completely the Buddhist view of life, that there was no need for him to occupy time with any discussions on ultimate questions. In his 'Path of Purity' he gives, with admirable judgment as to the general arrangement of his matter, and in lucid style, a summary of the Buddhism of his time. There is no argument or discussion. In his six great commentaries—those on each of the four *Nikāyas*, containing the Doctrine; on the *Vinaya*, containing the Canon Law; and on the *Abhidhamma*, containing the advanced Psychology—he adheres to one simple plan. He first gives a general introduction—dealing mainly with literary history—to the work itself. To each of the more important Dialogues, or *Suttas*, he gives a special introduction on the circumstances under which it was supposed, when he wrote, to have been originally spoken, and on the places and the persons mentioned in it. He quotes in the comment on the *Sutta* every word or phrase he considers doubtful or deserving of notice from a philological, exegetical, philosophical, or religious point of view. His philology is far in advance of the philology of the same date in Europe, and his notes on rare words are constantly of real value, and not seldom conclusive. He gives and discusses various readings he found in the texts before him; and these notes, together with his numerous quotations, go far to settle the text as it lay before him, and are of great service for the textual criticism of the originals. Of the higher criticism Buddhaghoṣa is entirely guiltless. To him there had been no development in doctrine, and all the texts were the words of the Master. He is fond of a story, and often relieves the earnestness of his commentary with anecdote, parable, or legend. In this way, without in the least intending it, he has preserved no little material for the history of social customs, commercial values, folk-lore, and belief in supra-normal powers. His influence on the development of the literary faculty among Buddhists throughout the world has been very considerable. It is true, no doubt, that the method adopted in his commentaries follows very closely the method of those much older ones preserved in the Canon; but the literary skill with which he uses it is a great advance, more especially in lucidity, over the older documents.

Gray, London, 1892); *Dīgha*, ed. Rhys Davids and Carpenter (*PTS*, 1899, 1903); E. Forchhammer, *Jardine Prize Essay* (Rangoon, 1885); Mrs. Rhys Davids, 'Buddhist Psychology' (*RAS*, 1900).

T. W. RHYS DAVIDS.

BUDDHISM.—The character of Buddhism varies according to the country in which it prevails, so that a general sketch would be of very little value. The origin of Buddhism has been given in the article BUDDHA; its early developments will be described in two articles, one on the HĪNAYĀNA, or Little Vehicle, the other on the MAHĀYĀNA, or Great Vehicle. Then the Buddhism of each country will be separately treated under the name of the country. See BHUTĀN, BURMA, CENTRAL ASIA, CEYLON, CHINA, INDIA, JAPAN, JAVA, KOREA, SIAM, TIBET. See also SECTS (Buddhist).

BULGARIANS.—See BOGOMILS.

BULL.

Egyptian.—See ANIMALS, EGYPTIAN RELIGION.
Greek and Roman.—See ANIMALS, TAUROBOLIUM.
Hindu.—See ANIMALS, VEDIC RELIGION.
Semitic (A. H. SAYCE), p. 887.
Teutonic (C. J. GASKELL), p. 889.

BULL (Semitic).—The wild bull (Assyr. *rīmu*, Heb. *rĕ'ēm*) was found in Mesopotamia, whence it wandered into Babylonia and the level parts of Palestine, while the domesticated short-horned ox seems to have been indigenous in Western Asia before the rise of Bab. civilization. Further south, in Arabia and the Sinaitic Peninsula, the country was unsuitable for cattle, and sheep took the place of oxen. This fact is important in view of the general opinion of anthropologists that the original home of the Semitic race was Arabia.

In Babylonia, figures of bulls guarded the approach to a temple, house, or garden. They were believed to protect the building from the entrance of evil spirits, and were often represented with wings, to which, in the Assyrian period, a human face was added. Colossal figures of them in stone or metal, called *lamassi* (from the Sumerian *lamma*), were placed on either side of the entrance. At times they were represented on the gates or walls as goring the enemy. The Semitic Babylonians included them among the *sêdi* (Heb. *shêdim*), or 'spirits,' partly beneficent, partly evil, with which the air was filled. Among the Sumerians, however, they had the specific name of *alad*. Ashurbanipal, in describing his destruction of Susa, states that he 'broke in pieces the *sêdi* (written *alad*), the colossal bulls (*lamassi*) which guarded the temple,' and 'removed the raging wild bulls that adorned the gates'; and in the legend of Chedorlaomer (?) we read that, when Bel determined to bring evil upon his temple at Babylon, 'its *sêdu*,' or guardian-bull, departed from it, and so allowed the Elamite to enter and destroy the sanctuary. The guardian-bulls were also known as *kirubi*, and corresponded with the cherubim which stood at the entrance to the Garden of Eden, protecting 'the way of the tree of life' (Gn 3^{24}). In a list of Bab. deities, the

names of 'the two divine bulls' of Ea of Eridu are given (*WAI* ii. 56, 59–60).

A bilingual hymn in Sumerian and Semitic (*ib.* iv. 23), addressed to 'the bull' who is 'the offspring of Zu,' the storm-god, describes it as 'the great bull, the supreme bull which treads the holy pasturage . . . planting the corn and making the field luxuriant.' 'Between his ears,' it is added, 'is the mouth of the deep,' or 'sea,' a great basin of water which stood in the court of a Bab. temple. As there is also a reference in the same hymn to 'the twelve gods of copper,' we are reminded of the 'sea' of Solomon's temple which 'stood upon twelve oxen' (1 K 7^{25}).

Among the Babylonians the bull symbolized strength, and hence was a synonym for 'hero'; it was probably on this account that the spirit which protected the gate was supposed to have a bull-like form. For the same reason Jahweh of Israel was compared to a wild bull (Nu 23^{22} 24^{8} etc.), and it is possible that the *abbîr* of the OT should be rendered 'bull' rather than 'mighty one.'

According to the Epic of Gilgamesh, Anu, the god of heaven, created a bull to avenge the insults offered by Gilgamesh to his daughter Ishtar, and to punish the hero by devastating his country and destroying his countrymen. The bull is called an *alû* (a word of Sumerian origin), and its horns are described as being of lapis lazuli, and of enormous size. The bull, however, was killed by Gilgamesh and his companion, in consequence of which, it would seem, Gilgamesh was afflicted with disease, while his companion suffered a premature death. The bull was really the constellation Taurus or the star Gud-ana, 'the bull of heaven'—a name which goes back to the age when the vernal equinox coincided with the entrance of the sun into Taurus. Jensen believes that it was a storm-god before being thus transplanted to the sky, and that a connexion was assumed between *alû*, 'the bull' and *alû* (Sumer. *alâ*), 'a storm-demon' (*Assyr.-bab. Mythen und Epen*, 1900, p. 452). The suggestion is supported by the fact that the bull is called the son of the storm-god (see above), and that it was a symbol of Hadad-Rimmon, the god of the air and the thunderbolt. Hadad is often depicted standing on the back of a bull. Hadad, however, was known in Babylonia as *Amurrû*, 'the Amorite god,' and it is therefore possible that his association with the bull was derived from Northern Syria. A recollection of the bull as a malevolent storm-deity may survive in the Mithraic representation of the sun-god slaying a bull.

In Northern Syria, where Hadad, the Cilician *Sandes*, was specially worshipped, the bull was his sacred animal. When the worship of the god under the name of *Juppiter Dolichenus* ('Juppiter of Dolichê') was transplanted to Rome, monuments were erected to him on which he is figured standing on a bull, with a double-headed battle-axe in one hand and a thunderbolt in the other. At Hierapolis (*Membij*), the successor of Carchemish, he was throned upon bulls as his consort was upon lions (Lucian, *de Dea Syria*, 31), and bulls were among the sacred animals kept in the court of the temple. On the stele of Esarhaddon found at Zinjerli he also stands upon a bull, and the same is the case in the rock-sculpture of Maltaiya (Place, Pl. 45) to the N.W. of Mosul. The earliest known representation of the god in a similar position is upon Babylonian seal-cylinders of the age of Ḫammurabi.

Further south the association of the bull with the supreme Baal can also be traced. Europa was carried from Phœnicia by Zeus, *i.e.* Baal, under the form of a bull; and the Cretan Minotaur was termed 'Asterius,' pointing to a belief in a connexion between the bull and the Phœnician *Ashtoreth*. Bulls of iron existed in the sanctuary of Zeus Atabyrius in Rhodes which may have owed their origin to Phœnician influence; and Silius Italicus (*Punica*, iii. 104 ff.) refers to the 'cornigera frons' of Milichus or Melkarth. The name (Ashtoreth-) *Karnaim* seems to imply the existence of a cow-headed Ashtoreth; and a cow is found on an early Bab. seal-cylinder as a symbol of Ishtar. A cow-goddess naturally presupposes a bull-god. On a Nabatæan monument a bull represents a god whom Sachau identifies with Kaẓiu or Kasios (*PSBA*, 1896, p. 1056).

According to Ex 32, a golden 'calf,' or more correctly a bull, was made by Aaron during the absence of Moses on Mount Sinai, and was worshipped by the Israelites as a visible representation of the God who had brought them out of Egypt. At a later date, Jeroboam set up images of bulls in the sanctuaries of the Northern Kingdom, where they were adored as likenesses or symbols of Jahweh. This Israelitish worship of bulls has been thought to have been derived from Egypt. But against this it is urged that the Egyptians worshipped the living animal, and not the image of it. The objection, however, is not convincing, since votive images of the Egyptian bulls Apis and Mnevis are numerous, and the Semitic equivalent of Egyptian beast-worship would have been image-worship. But the bull-worship of the Northern Kingdom was unknown in Judah, and it is therefore probable that it was derived from Northern Syria, Jahweh being identified with Hadad.

The bull-worship even of the Semites in Northern Syria was probably of foreign origin. The divine bulls of Babylonia were originally Sumerian, and the names applied to them by the Semitic Babylonians were borrowed from the Sumerian language. On the other hand, Hittite influence was strong in Northern Syria, and 'the bull-god' was one of the chief Hittite deities in whose honour images of bulls were dedicated. At Eyuk, near Boghaz Keui, a bull, mounted on a pedestal, is represented as being worshipped; and among the Phrygians the stealing of an ox was punished with death (Nic. Damascenus, 148, ed. Orelli). Asia Minor, in fact, was a land of cattle-breeding and agriculture, where the ox which drew the plough was held in special veneration. When an anthropomorphic conception of the deity was introduced from Babylonia, the human god accompanied by the animal took the place of the animal alone as an object of worship. The cuneiform tablets from the Assyro-Babylonian colonies near Kaisariyeh show that this must be dated at latest in the Ḫammurabi age.

It would thus appear probable that Northern Syria was the meeting-place of a twofold Sumerian conception of the bull: as a beneficent guardian of the homestead, and a malevolent storm-demon—derived in the one instance from the character of the domesticated animal, and in the other from that of the wild bull—and the Hittite worship of the bull-god as the protector of the cultivated land. Sumerian beliefs in regard to the bull were adopted by the Semitic Babylonians, and the association of the bull with the Syrian Hadad would have been the result of foreign influences. Bull-worship, in short, would seem to have been unknown to the early Semites, as indeed must necessarily have been the case if their primitive home was Arabia. It is significant that the Heb. word for 'wild bull' is borrowed from Babylonian, and is not found, at all events in that sense, in Arabic. The custom of hanging up *bucrania*, or ox-heads, above the doors of houses, moreover, was not Semitic. It was derived from the belief in the protecting powers of the divine bull, and, like the Bab. *lamassi*, of

which they were a survival, the *bucrania* prevented the entrance of evil spirits into a house, as a horse-shoe is still supposed to do in certain parts of England. The custom was naturally prevalent throughout Asia Minor, and the bull's head frequently makes its appearance on Cyprian seal-cylinders of the early Copper Age. The custom was also known to the Nubian settlers in Egypt in the time of the XIIth and following dynasties, from whom the usage, described by Herodotus (ii. 39), of making an ox-head a scapegoat, may have been derived (see also Dt $21^{4.6}$). In Arabia and Palestine the apotropæic use of the *bucranium* was practically unknown.

LITERATURE.—In addition to the authorities cited above, see Baudissin, *Studien zur sem. Religionsgesch.*, Leipzig, 1876, i.; Sayce, *Hibbert Lectures*, London, 1891, pp. 289–93.

A. H. SAYCE.

BULL (Teutonic).—Plutarch in his life of Marius (cap. 23) states that the Cimbri took with them on their expedition into Italy a brazen bull, on which they were accustomed to swear solemn oaths. Apart from this, there is little evidence for the sacred character of cattle among the Teutonic races, beyond the fact that they were used for sacrifice. A primitive cult of the cow would appear to be reflected in the Edda account of the creation of the world, where the cow Audhumbla exists before either gods or men, and plays an important part in their origin. There is, moreover, in the saga of Olaf Trygvason, a curious legend, which relates that a certain Ogwald worshipped a cow, which he took everywhere with him, and which at his death was buried beside him in a second cairn. The only addition to these vague indications is the statement of Tacitus (*Germania*, 40), that the sacred car of the goddess Herthus was drawn by yoked cows; and it may be noted that in the Middle Ages oxen drew the chariots of the Merovingian kings.

C. J. GASKELL.

BULL-ROARER.—'Bull-roarer' is the English name (Germ. *Schwirrholz*) of a common toy in the country districts of Great Britain and the Continent. It is merely a thin slat of wood, with a hole for the insertion of a string, and is usually either oval or oblong in shape and pointed at the extremities; sometimes the edges are serrated. Tied to a string, and the string firmly held, the bull-roarer is swung round, and produces a kind of muffled roar. The mystic or magical connexions of the bull-roarer in Europe will be noticed later; we must first consider its very important part in the religion of the most backward races. It has been most carefully studied among the aborigines of Australia, and its uses are analyzed by Père P. W. Schmidt in his paper 'Die Stellung der Aranda' (Arunta), in *ZE*, 1908, Heft 6.

Beginning with the Arunta, in the exact centre of Australia, we find a people who, in one region described by Spencer and Gillen, have no conception of a sky-dwelling superior being, or 'All-Father'; while in the area studied by Strehlow the sky is understood to be tenanted by a magnified man, Altjira, called *mara* ('good'), but as indifferent to mankind as they are to him. In this tribe, as in most others where initiations of the boys exist, the bull-roarer is swung by the men at the secret ceremonies; the noise warns the women to keep at a distance, and they are told that the roar is the voice of a being named Twanyirika. The long absence of the boys while their wounds are healing is explained by the circumstance that Twanyirika 'enters the body of the boy after the operation and takes him away into the bush until he is better.'* The operation over, the boy is shown the bull-roarers (always carefully concealed from women), and his elder brother comes to him with a bundle of Churinga, saying, 'Here is Twanyirika, of whom you have heard so much, they are Churinga [sacred things] and will help to heal you quickly.' The boy is told that women of his tribal kin will be slain if he lets them see the bull-roarers.*

* Spencer-Gillen[a], 246, note 1.

So far, Twanyirika seems to be a mere bogle, in whom the initiated do not believe. Among the tribe next to the north of the Arunta, the Unmatjera, the boy is told, before being circumcised, that Twanyirika will carry him away if he reveals any of the secrets of initiation.† After the process of sub-incision he is told to swing the bull-roarer, while in the bush, or else another *arakurta* (youth circumcised, but not yet sub-incised), '*who lives up in the sky*, will come down and carry him away. If this *arakurta* hears the *luringa*—that is, the noise of the bull-roarer—he says, "That is all right," and will not harm him.'‡

This idea of a sky-dwelling being, concerned with the initiations, is not found among Spencer's branch of the Arunta; the being of the Unmatjera is not an All-Father; nor are the Unmatjera known to have any belief in an All-Father. This notion of a sky-dweller, however, forms a link with the belief of the Loritja or Luritcha tribe, whose lands march with those of the Arunta on the east. They believe in a celestial and powerful being, Tukura, who has no concern with ethics or any interest in men, but does perform ceremonies like those of the tribe, involving the use of the bull-roarer, and the initiation of celestial young men. Tukura is known to the women, as is Altjira, the sky-dweller of Strehlow's Arunta, or Aranda; but Altjira does nothing but hunt, eat, and amuse himself. Among the Loritja, beings named Maiutu play the part of Twanyirika; one cuts off the heads of the boys, sticks them on again, and is slain; another receives food from the boys. He has a sharp-pointed leg-bone, like Daramulun among the Wiradjuri of the south-east, and Daramulun is, with them, the being of the bull-roarer, but subordinate to the sky-dweller, or All-Father, the ethical Baiame.§

North of the Arunta are the Kaitish tribe, who are but half-converts to Arunta ideas. They believe in an All-Father, Atnatu, who 'arose up in the sky in the very far back past, . . . made himself, and gave himself his name.' Before the Alcheringa (*q.v.*) he drove some disobedient sons out of heaven to earth, whence he dropped down 'everything which the black-fellow has,' including bull-roarers. These sons are the ancestors of half the tribe. Two *churinga* (bull-roarers), dropped by Atnatu, became men, who, making wooden bull-roarers, imitated the sound of Atnatu's bull-roarer in the heavens, that is, obviously, thunder. They were named Tumana; they died an ill death; but now the women (who know not Atnatu) believe that Tumana plays the part of Twanyirika among the Arunta. Atnatu himself is an All-Father, insisting on ceremonies and bull-roarers, but unconnected with morals.‖

The Warramunga have no Atnatu, as far as is known; their bull-roaring being is Murtu. Murtu, like the Tumana, was killed by a dog, which could not destroy the bull-roarer, *murtu-murtu*. The spirit of *murtu-murtu* instantly sprang up in certain trees, of whose wood bull-roarers are made.¶

The N. by E. Binbinga and Anula have, or teach to the women, similar beliefs; the bull-roarer is *watamura* or *mura-mura*; the beings connected with it are Katajalina and Gnabaia. The women are told that these beings swallow the boys, and disgorge them, re-born, as initiated men. This

form of the exoteric myth is very common, occurring even among the tribes of the south-east.*

The S.E. tribes had not the spiritual philosophy of the central and northern communities. In that philosophy primal souls are perpetually re-incarnated, or in some regions spirits, *ratapa*, emanating from the primal totemic beings, are incarnated, and, after one earthly life, retire to the isle of the dead, and are finally annihilated.† There is thus no place of rewards and punishments for souls, while the evolutionary theory (see ALCHERINGA) makes a creative being superfluous, though, as Atnatu, he survives among the Kaitish.

The S.E. tribes in parts of Queensland, and in Victoria and New South Wales, had not the spiritual and evolutionary philosophy of the northern tribes, or among them it was not dominant, and they believed in a great sky-dwelling anthropomorphic being, the maker of most things, ethical, and the source of customary laws, who gives his sanction to morals, and is invoked at the initiatory rites, where a temporary image of him is made. Like Atnatu, he is unknown to the women and children. The thunder is his voice, and the bull-roarer, imitating the thunder, is sacred. Like the central and northern tribes, those of the south-east inculcate the belief in a being closely connected with the bull-roarer, but this being is taken more seriously than in the north and centre. He is the son, or 'boy,' practically the deputy, of the superior being, the All-Father. Among the Kurnai he is Tundun (which is also the name of the bull-roarer); among the Euahlayi and Kamilaroi he is Gayandi, under Baiame; among the Wiradjuri he is Daramulun, under Baiame; but among the Yuin, Daramulun is himself the All-Father.

The functions of the bull-roarer being, with the exoteric myth that he swallows the boys and disgorges them, are practically identical with the functions of Twanyirika and Tumana and the rest in the centre and north. The Wiradjuri Daramulun, like the Maiutu of the Loritja, has a leg which ends in a sharp bone.‡ Among seven of these tribes a larger (male) and a smaller (female) bull-roarer are used: among the Kurnai the larger represents Tundun, father of the race, the smaller represents his wife; but the distinction of sex is not said to exist among the Chepara and Turbal; § with the Chepara the small bull-roarers given to the initiates are only tokens of initiation. Mr. Howitt thinks, 'but could not be sure,' that the female bull-roarer among the Kurnai indicates ceremonies in which the women take a certain part; ‖ the Parnkalla also use a larger and a smaller bull-roarer; nothing is said of their sex.¶ Among the Wiradjuri the bull-roarer (*mudjigang* or *bobu*) does not, as among the Kurnai, bear the name of the bull-roarer being, *Daramulun*. 'There is an absence in the western tribes of a belief in an anthropomorphic Being by whom the ceremonies were first instituted.'** These western tribes conform to the ideas of the Dieri, who have no known All-Father, but believe in a multitude of *Mura-mura*—fabulous primal beings like those of the Arunta Alcheringa. Among them only bull-roarers marked with notches indicating their use at ceremonies are sacred; others are made a joke of.†† Practically they have not been consecrated. 'Changes in custom,' according to Howitt and Spencer-Gillen, 'have been slowly passing down from north to south,' from the Arunta and Dieri to the sea at Port Lincoln, among the western tribes. The ideas of Alcheringa and evolution appear to be northern and western; the All-Father belief is southern and eastern.

‖ *Ib.* 628. ¶ *Ib.* 668–670. ** *Ib.* 677. †† *Ib.* 660.

Père Schmidt, who finds the bull-roarers of sex in the reports of R. H. Matthews* among the Wiradjuri and other tribes (where Howitt found nothing about sex), and of Strehlow, in connexion with the maternal totem, has a theory that the large bull-roarer represents Twanyirika, Maiutu, etc., as fathers of the race, the small their wives as the mothers of the race,† and connects this with the sun and moon myths, and a period of so-called 'matriarchate' among tribes now reckoning descent in the male line, also with the 'sex totems' (animal friends of either sex) of the Kurnai and many other Australian tribes. There is also a theory of Papuan invasions, but the whole hypothesis cannot here be criticized.‡

The bull-roarer is in general use, among the central tribes, for magical purposes, and the spiritual element of their philosophy, as regards conception, is involved, especially in connexion with the stone *churinga nanja* of the Arunta nation, which are often, but not always, shaped like bull-roarers. Elsewhere these stone *churinga*, with totemic markings, are not found in use among the Australians.

Marett has advanced the opinion that 'the prototype' of the All-Fathers 'is nothing more or less than' the bull-roarer. 'Its thunderous booming must have been eminently awe-inspiring to the first inventors, or rather discoverers, of the instrument, and would not unnaturally provoke the "animatistic" attribution of life and power to it . . . a genuine Religion . . . has sprung up out of the Awe inspired by the bull-roarer.' §

But, as we have seen, there are, even in Australia, plenty of bull-roarers where there is no All-Father. Among the Arunta, Altjira has nothing to do with the bull-roarer, nor has Ulthaana, another sky-dwelling being of the Arunta.‖ It is usually not the All Father, but his 'boy,' as Tundun, who manages the bull-roarer. Moreover, it is thunder, not the bull-roarer, which very naturally inspires awe; it is the voice of the All-Father; the bull-roarer only represents that voice. Finally, the All-Father is found all over the world, in places where the bull-roarer is unknown.

The bull-roarer is of more importance in Australian religion, myth, and ritual than elsewhere. Its use at the Greek mysteries of Dionysus was explained by the story that it was a toy of the child-god.¶ Two or three bone bull-roarers of palæolithic times have been discovered and published. Like those of the north and central Australian tribes, they are decorated with incised concentric circles or half-circles. Thus palæolithic man may have had a religion akin to that of the Australians.

Bull-roarers in connexion with religion or magic are found in South and West Africa; among the Apache and Navaho Indians of North America, and the Koskimo of British Columbia,** where the

¶ Lobeck, *Aglaophamus*, i. 700.
** To these tribes may be added the Eskimo, Kwakiutl, Arapaho, Ute, Central Californians, Pueblo, and the ancient cliff-dwellers. 'The Hopi, who regard the bull-roarer as a prayer-stick of the thunder, and its whizzing noise as representing the wind that accompanies thunderstorms, make the tablet portion from a piece of lightning-riven wood. . . . The Navaho make the bull-roarer of the same material, but regard it as representing the voice of the thunder-bird, whose figure they often paint upon it. . . . Apache, Hopi, and Zuñi bull-roarers bear lightning symbols; and while in the semi-arid region the implement is used to invoke clouds, lightning, and rain, and to warn the initiated that rites are being performed, in the humid

bull-roarer being, as in Australia, is said to carry away the young initiate. This fable is, of course, intended merely for the women and children; the boys, when initiated, discover the absurdity of the figment. Central Brazil, New Guinea, the Torres Islands, Florida in the Melanesian group, the North-West Solomon Islands, and Sumatra are all familiar with the bull-roarer.* For modern Europe, as well as for the lower culture, see A. C. Haddon, *The Study of Man*, pp. 277–327, and *GB*[2] iii. 424. In Aberdeenshire the cow-herd boys used to swing the bull-roarer as a charm against thunder.

The most astonishing parallel to the Kaitish story of a bull-roarer dropped from heaven to earth by Atnatu occurs in the following note of the present writer, which, fortunately, is dated: 'Bull-roarer in Cantyre' (Argyll) "*Srannan*, pronounced *Strantham*, the first in this quarter fell from Juppiter." Macalister, October 20, 1885.' Mr. Macalister was a Gaelic-speaking schoolmaster at St. Mary's Loch, in the parish of Yarrow, Selkirkshire, and was an aged man in 1885, full of vigour and intelligence. The parallel myth of the Kaitish was not published till 1904. For a drawing of a Maori bull-roarer, in the Christy Museum, and for an early study of the subject, see 'The Bull-Roarer' in Lang's *Custom and Myth*, pp. 29–44 (1884 and later editions). For the use of *jurapari* pipes in Brazil, to scare away the women from the rites of the men, see A. R. Wallace, *Travels on the Amazon*, 1853, p. 349.

LITERATURE.—The literature has been given throughout the article.

A. LANG.

BULLS AND BRIEFS.

BULLS AND BRIEFS.—Under this heading may be conveniently considered not only those documents of the Papal chancery which are technically so designated, but also the various other classes of 'apostolic letters' which in comparatively modern times have been increasingly employed by the Roman Pontiffs in their most important utterances. For this wider interpretation of the name 'bulls' there is excellent authority. Both bulls and briefs are in their essence Papal letters, and the *quasi*-official collection known as the *Bullarium Romanum* includes Encyclicals, Motu Proprios, and other similar constitutions which possess just the same force, as sources of the Canon Law, as the bulls, briefs, and decretals which we should primarily expect to find there (see the prefatory letter prefixed to vol. i. of the *Bullarium* of Benedict XIV.). For the same reason any calendar of Papal *Urkunden*, such as the important *Regesta Pontificum Romanorum* (from the beginning to 1198) of Jaffé-Löwenfeld (continued to 1304 by Potthast), might be correctly described as an abstract of the letter-books of the Holy See; and in point of fact the first authentic document which Jaffé has summarized, or in other words the first Papal bull, in the wider sense, of which the text is preserved to us, is the famous letter addressed by Pope Clement I. (Clemens Romanus) to the Church of Corinth. This, and two other letters of the time of Pope Cornelius, form the only complete specimens we possess of the official correspondence of the Popes down to the middle of the 4th century.

I. Early Papal letters.—Beginning, however, with the time of Pope Julius I. (337–352), a much larger collection of documents becomes available. This fact alone lends a certain probability to the conjecture based upon the language of the *Liber Pontificalis* (i. 205, ed. Duchesne), that a reorganization of the Papal archives took place under this pontificate. We hear of a body of officials (*schola notariorum*) and of a responsible director (*primicerius*), while only a few years later an inscription of Pope Damasus seems to speak of the construction of a special *archivium*, later called the *scrinium* (see de Rossi, 'La Bibliotheca della Sede Apostolica,' in *Studi di Storia e Diritto*, v. 340).

The natural result of the official registration of documents which all this organization seems to imply must have been to create by degrees a recognized Pontifical chancery, and to establish the use of traditional forms and customs with regard to the drafting, dating, and expediting of Papal letters, which we find fully developed at a later period. Down to the time of Hadrian I. (772–795) our knowledge of these forms is somewhat vague, and in no case founded upon the original documents themselves. For the most part the texts of which we have copies are of an epistolary or hortatory character, often mere extracts, in which addresses, salutations, and subscriptions are naturally little regarded. The earliest Papal writings known to us which have any claim to be regarded as legal instruments date from the beginning of the 5th cent., and were addressed by Pope Zosimus to the Bishops of Arles (see Mansi, *Concilia*, iv. 359; and H. J. Schmitz in *Histor. Jarhb.* xii. [1891] 1 ff.; but cf. Nostiz-Rieneck, *ZKT* xxi. [1897] 6 ff.). Still, the number of Papal letters of earlier date than the year 772, preserved to us in whole or in part, amounts in round numbers to nearly 2400, and in some cases, notably in that of Pope Gregory the Great, we can argue back to the arrangement of these letters in the *Regesta*, or letter-books, from which they have ultimately been copied. Even from an early period it seems that the Papal chancery was carefully organized, for already in the time of Gelasius I. (492–496) we find traces of the numbering of the letters in the *Regesta*, and we know that the *primicerius notariorum*, or head of the chancery, was one of the most important officials in the Roman Church. He was the Pope's counsellor (*consiliarius*), by which name he is sometimes designated, and during the vacancy of the See he exercised for the time being a supreme authority in conjunction with the archpriest and the archdeacon. We have also reason to believe that the *secundicerius*, or second in command, was regarded as holding an important post of trust.

As regards the drafting of the documents of this early period, it seems clear that they were all modelled on the type of an ordinary Roman letter. Like a Roman letter, the missive is preceded by an *intitulatio*, or formal naming of the writer, and an *inscriptio*, or naming of the addressee, this last being often coupled with a form of salutation. Thus: 'Leo Episcopus, Presbyteris et Diaconibus Ecclesiae Alexandrinae, dilectissimis filiis, in Domino Salutem.' In many cases, however, the *inscriptio* precedes the *intitulatio*, as, for example, 'Gloriosissimo et clementissimo Filio Justiniano Augusto, Vigilius Episcopus.' Gregory the Great seems to have been the first to employ habitually the formula 'servus servorum Dei' in the *intitulatio* of his letters, but this style was not at once adopted by his successors. It seems, however, to have gradually won its way back into favour, and in the Papal letters of the 8th cent. it is rarely omitted. The salutation, which was by no means always appended to the *inscriptio*, takes different forms. In the earlier letters we find simply

area it is used to implore the wind to bring fair weather. The bull-roarer is a sacred implement, associated with rain, wind, and lightning, and among the Kwakiutl, according to Boas, with ghosts' (Hough in *Handbook of Amer. Indians*, i. [=*Bulletin 30 BE*] 170 f., where further literature is given). From these American examples it appears that the bull-roarer is rather a magical instrument than a thing associated with the religious idea of a Lord of Thunder, as among certain Australian tribes.

* Fraser, *GB*[2] iii. 424. Note 1 contains a list of authorities.

'salutem'; under Julius I. (337–352), 'in Domino salutem,' and, later on, other amplifications. Pope Adeodatus (672–676) adopted the form 'salutem a Deo et benedictionem nostram,' and this perhaps paved the way for the existing usage 'salutem et apostolicam benedictionem.' At the close of the Papal letter was appended, first, the *subscriptio papae*, and, secondly, the date. The *subscriptio papae* did not take the form of what we should now call a signature, *i.e.* the writing of the Pope's own name, but consisted simply of a word of blessing and farewell. For example, 'Deus te incolumem custodiat, frater carissime,' or, more commonly, 'Bene vale, frater carissime'; but from the 7th cent. onwards the Papal missives of a more formal and legal character rarely had any other subscription than the simple 'Bene vale,' or 'Bene valete.' As for the date, which comes last of all, it was probably never omitted in the originals, though it is so often lacking in the copies which have been preserved to us. Down to the end of the 5th cent. we usually find only the day of the month and the names of the consuls, *e.g.* 'Data tertio idus Februarias, Arcadio et Bautone consulibus'; but from about 490 onwards the year of the indiction is, at first sometimes, and later on invariably, added. With regard to the body of the document, it is easy, especially with the aid of the numerous extant letters of St. Gregory the Great, to recognize the gradual introduction of certain traditional forms and phrases. The occurrence in our copies of such abbreviations as 'secundum morem,' or 'de more solito,' implies the same, and in the so-called *Liber Diurnus* a collection of Papal formularies is preserved to us, the earliest portion of which is believed to have been compiled shortly after St. Gregory's time. We meet also in these early letters, particularly from the time of Leo I. (440–461), a certain rhythmical cadence known as the *cursus*, which, after falling into abeyance for a long period, re-appears at the end of the 11th cent. (see Duchesne, 'Note sur l'Origine du *Cursus*,' in the *Bib. de l'École des Chartes*, vol. l. p. 162), and was then maintained until near the close of the Middle Ages. Finally, the document was probably written on papyrus, and had attached to it a cord, with a leaden seal, the *bulla*. As already stated, no original deeds of this period remain to us, but we have the leaden seals which must once have been attached to letters of Pope John III. (560–573), of Deusdedit (615–618), and others. These *bullae* are about an inch in diameter, and bear on one side the Pope's name in the genitive, and on the other the word PAPAE. It is, of course, from this feature that the Papal letters themselves have come to be called 'bulls'; but this designation is not used officially in any early document. The Popes speak of their own letters, or of those of their predecessors, as *litterae*, *epistola*, *pagina*, *scriptum*, or, less generally, as *privilegium*, *praeceptum*, or *auctoritas*.

2. **From 772 to 1048.**—With the accession of Hadrian I. it is convenient to begin a new period in the history of the Papal chancery, and this for two reasons: first, because the earliest specimen of an original bull—even then a mere fragment, seemingly of a letter on papyrus addressed to Charlemagne—belongs to this pontificate; secondly, because some re-organization of the chancery must have occurred at this time, the result probably of the improved political status of the Holy See, now strong in the support of Pepin and his son. Already we may begin to trace that broad division of Papal documents into two categories (see Schmitz-Kallenberg, 'Papsturkunden,' in Meister's *Grundriss*, i. 198), which is practically perpetuated in the popular locution of 'bulls and briefs,' though, perhaps, for these earlier periods it is better to retain the terminology of Bresslau, Diekamp, and Léopold Delisle, and to speak of 'privileges' and 'letters.' The latter class were, as the name imports, simply letters. They were written on sheets of papyrus of smaller size, and elaborate formulas of dating were dispensed with. Their purpose was ephemeral, and as a result the originals have almost completely disappeared, only one entire specimen (of the time of Clement II. [1046–1047]) being preserved to us. Of 'privileges,' however, though these must have been far more rarely issued, a comparatively large number of originals remain, their preservation being the natural result of the fact that they commonly conferred or confirmed a title in matters either of property or of jurisdiction. A catalogue of these early Papal documents on papyrus, twenty-three in number, has been given by H. Omont in the *Bib. de l'École des Chartes*, 1904 (cf. also Melampo in *Miscellanea di Storia e Cultura Ecclesiastica*, 1905–1907). Concerning these more formal 'privileges,' therefore, to which it is usual to give the names of bulls, we are fully informed, and their peculiarities have often been described. They are made of broad strips of papyrus, and the whole document is sometimes as much as 10 ft. long and from 18 to 24 in. broad. A wide margin is left at the top; then follows in large writing the *intitulatio* and *inscriptio*, with the formula 'in perpetuum.' The body of the document comes next in a smaller hand, and beneath it the so-called 'double date.' This consists of two distinct entries, of which the one seemingly has reference to the engrossing of the instrument, for it begins with the words 'scriptum per manus N.N.,' with the day of the month and the indiction, the other concerned with its final expedition or delivery, and expressed in the words 'Data' or 'Datum,' with month and day and fuller details of the year, 'per manum N.N.' Between these comes the *subscriptio papae*, which takes the form of the words †BENE
VALETE†
generally written in two lines in uncial letters with a cross preceding and another cross or SS (*subscripsi*) following. That this was at first written by the Pope's own hand is rendered probable by the fact, first, that the hand of the BENE VALETE always differs from that of the body of the document and of the dates; and, secondly, that in the cases in which we possess more than one original bull of the same Pontiff, the identity of the characters of the BENE VALETE seems well established. Further, in certain 'privileges' of Pope Silvester II. (999–1003) we find invariably added to the BENE VALETE a few words in the so-called 'Tironian notes' or short-hand, for example, 'Silvester Gerbertus Romanus episcopus subscripsi,' or 'Gerbertus qui et Silvester episcopus' (see Ewald in *Neues Archiv*, ix. 321 ff.). Still it would seem that already in the time of Clement II. (1046–1047) the practice was being given up, and that the Pope henceforth was usually content with marking a cross or other private signs beside the BENE VALETE already written there by the engrosser. Finally, the *bulla*, or leaden seal, was attached to the document, strings of hemp or silk being passed through the lower margin of the papyrus, which was folded once or twice to give greater strength, while the seal was impressed upon these strings. Down to the end of the 11th cent. the *bullae* bore nothing more than the name of the Pope on one side and the word 'papae' on the other, though the arrangement of the letters, complicated with certain crosses and dots, varied considerably. At this period also, as we may often learn from the details given in the second (or 'delivery') date of the 'privileges' just described, the chief position

in the Papal chancery was taken by an official known as the *bibliothecarius sanctae apostolicae sedis*, who no doubt was originally no more than the custodian of the archives. By degrees, however, he seems to have taken over the functions of the *primicerius notariorum*. He was generally a bishop, and soon we find him commonly invested with the title *cancellarius*. As an illustration of the kind of details given in the second dating clause, the following specimen taken from a bull of Silvester II. of the year 999 may be worth quoting:

'Data VIIII Kl. decemb. per manum Johannis, episcopi sancte Albanensis ecclesie et bibliothecarii sancte apostolice sedis, anno pontificatus domini nostri Silvestri secundi pape primo, imperante domino nostro tertio Ottone, a Deo coronato, magno et pacifico imperatore, anno quarto, in mense et indictione suprascriptis.'

Although the year of the Incarnation is not here mentioned, it is to be met with occasionally in Papal documents somewhat earlier than this. Details of this kind, which are often of great critical importance, will be found noted at the head of each pontificate in Jaffe-Löwenfeld's *Regesta* and in Mas Latrie's *Trésor de Chronologie*, 1889, pp. 1035–1148.

3. From 1048 to 1198.—After the accession of Leo IX. in 1048, the more stable traditions of the Papal chancery seem to have given place to a period of very rapid development. There was at first a good deal of chopping and changing in the forms observed, but after the lapse of about a century we find a pretty general uniformity of usage in documents of the same nature. In any case the broad distinction between 'privileges' and 'letters' still held good, though these great groups themselves have now to be divided into classes, each with characteristics of its own. To begin with the more formal and elaborate documents (the 'privileges'), the era of Leo IX. seems to have introduced the general use of parchment in place of papyrus, and possibly as a consequence of this, the employment of minuscule instead of 'Lombardic' writing; but there were also other changes which may be said to have transformed the external features of the great bulls and to have lasted down to the present day. The *subscriptio papae* ceases to consist in the writing of the words BENE VALETE, this being now represented by a monogram followed by three dots and a huge comma (see, upon this, Pflugk-Harttung in *Mittheil. Inst. Oest. Gesch.* v. [1884] 434 ff.). The comma and dots, which appear but for a short period, probably stood for 'subscripsi.' In place of the BENE VALETE, the Pope's sign manual now took the form of a 'rota' drawn in the blank space below the centre of the document, but a little to the left. The 'rota,' or wheel, derives its name from the two concentric circles, from 2 to 5 in. in diameter, inside which a cross was drawn, with the words 'scs petrus scs paulus' and the Pope's name arranged thus:

SCS	SCS
PETRVS	PAVLVS
PASCHA	LIS
PP	II

Between the concentric circles was written the Pope's motto—usually a brief text from the Psalms. That of Paschal II., for example, was 'Verbo Domini coeli firmati sunt.' Before the first word a rude cross is marked, and this at least is believed to have been done by the Pope's own hand. Between the 'rota' thus drawn to the left and the BENE VALETE monogram standing parallel to it a little to the right, the Pope's name was engrossed in the following or some similar form: 'Ego Paschalis Catholicae Ecclesiae Episcopus subscripsi.' At a somewhat later time the attestations of a certain number of Cardinals present were also written below the name of the Pope in three columns, consisting respectively of Cardinal Bishops, Cardinal Priests, and Cardinal Deacons. We may say that the 'rota' and B.V. monogram, which appear first in the time of Leo IX. and which with slight variations have lasted down to the present day, still constitute the most striking external feature of the most solemn kinds of bulls. Of the other changes connected with this period it is only needful to notice that the *Scriptum* clause, *i.e.* the date of the engrossing, disappears from all Papal documents, and that the leaden *bulla*, which was, as a rule, appended alike to 'privileges' and 'letters,' assumed under Pope Paschal II. (1099–1107) the type which it has retained ever since; that is to say, the obverse of the seal shows the busts of St. Peter and St. Paul facing each other—St. Peter to the spectator's right, St. Paul to the left, with a rude cross between them, while above their heads appear the letters S. PA. and S. PE. On the reverse we find the name of the reigning Pope in the nominative, *e.g.* 'Urbanus PP. III.' On both sides of the *bulla* are circles of dots, and there is some reason to believe that the exact number of these dots for any given pontificate was a point carefully attended to, and was meant to be used as a test of authenticity. There can be no doubt that, like the documents themselves, the leaden *bullae* appended to them were freely fabricated at a later date. Even in the British Museum *Catalogue of Seals* a number of these early *bullae* are entered (vol. vi., Nos. 21681–21698), without any indication of the fact that the examples so described are forgeries.

The tendency to reserve the more elaborate forms of authentication with 'rota,' monogram, and signatures, as above explained, for certain very solemn 'privileges' became accentuated even during this early period; and Schmitz-Kallenberg already distinguishes from them a class of 'simple privileges,' which, while of substantially the same nature as regards their inscription and contents, lack these and some other formalities. In the case of the 'letters' also, we may note two kinds, viz. the *litterae cum filo serico* (*i.e.* in which the *bulla* hangs by silken cords) and *litterae cum filo canapis* (in which hemp was employed). The authority just named also attributes to this period the first appearance of *litterae clausae*. This does not mean to say that ordinary Papal 'privileges' and 'letters' were sent to the recipient open, so that all men could read them, but only that their fastening, which seems to have been effected by the strings to which the *bulla* was attached, could be undone without mutilating the document. In the case, however, of the *litterae clausae* the parchment was so folded and the *bulla* so attached that nothing of the contents could be read without destroying the *bulla* as an authentication (see Diekamp in *Mittheil. Inst. Oest. Gesch.* iii. [1882] 865 ff.). It is possible that the use of waxen seals with the 'Fisherman's ring' may also date from this time (cf. Jaffe, *Regesta*, Nos. 5225 and 5242), but no specimen is now in existence.

4. From 1198 to modern times.—The pontificate of Innocent III. (1198–1216) marks an epoch of the highest importance in the history of the Papal chancery. From this time forward not only do the original documents exist in abundance, but the official *Regesta*, or letter-books, of which only a few fragments are known before this date, are preserved to us in an almost uninterrupted series. Furthermore, Innocent III., like the great organizer that he was, devoted special attention to this most important matter (*Nouveau Traité de Diplomatique*, vi. 168 ff.). He built new premises for the chancery, and it was no doubt due to his per-

sonal influence that a strict uniformity and an adherence to certain recognized rules are henceforth observable in all its instruments. With the greatly extended authority of the Holy See and its more frequent intervention in matters other than purely religious, the scope of the many Papal pronouncements seems to be widened. The distinguished canonist Alexander III. (1159–1181) by his *litterae decretales* (letters containing decisions of points of law submitted to him) had already built up a vast edifice of Case Law, which was soon to be published to the world by Pope Gregory IX. in the Book of the Decretals compiled under Pontifical direction by St. Raymond de Pennaforte (1234). The great mass of this material was furnished by the replies of Alexander III., Innocent III., and his two successors, Honorius III. and Gregory IX. himself; and the tone of the law-giver seems insensibly to become emphasized in all subsequent Papal utterances. Moreover, we now touch upon a period when such documents often seem to be addressed to all Christendom, and no longer consistently observe the form of letters directed to an individual or group of individuals. From this date the 'great privileges' with their 'rota' and B.V. monogram and their elaborate attestations of Cardinals become less numerous; while, on the other hand, only a few years later, under Innocent IV., we are for the first time confronted with that form of Papal document, technically and strictly known as a 'bull,' which is something intermediate between the formal 'privilege' and the simple 'letter.' In this, as in a 'privilege,' the first line is written in tall letters, but it ends not with the abbreviation IN PP. (*in perpetuum*), but with the phrase 'ad perpetuam rei memoriam,' or something equivalent, *e.g.* 'ad certitudinem perpetuam et memoriam futurorum.' There is often no mention of the person addressed; but the document concludes with certain minatory clauses, 'Nulli ergo,' etc., and 'Si quis,' etc., directed against all who may contravene what is therein laid down, ending, without any other subscription, in a simple date mentioning the place, the year of the Incarnation (but this was a later addition), and the year of the pontificate. To this document the ordinary leaden *bulla* was attached by silken cords. It was in this form that many important pronouncements were given to the world during the 13th and 14th cents., more particularly the manifestos of Boniface VIII., *e.g.* the *Ausculta fili* and the *Unam sanctam* which provoked so much resistance from their appeal to the authority of 'the two swords' and the consequent claim to far-reaching authority in temporal matters. As the initial words themselves of the bull *Ausculta fili*, directed to Philip IV. of France, would suffice to show, many of these utterances were still letters in form and addressed to individuals, but in their scope they appealed to Christendom at large.

In Innocent III.'s days some of these *quasi*-political documents took the form of 'privileges.' This was the case with the bull in which Innocent accepted and ratified the surrender by which king John made England a fief of the Holy See. But after the 14th cent. this more elaborate form of instrument—'consistorial bulls,' as they were called, from the fact that the attestations of the Cardinal Bishops, Cardinal Priests, and Cardinal Deacons were given in one of those assemblies of Cardinals in council with the Pope, known as 'Consistories'—became very unusual. It was confined, in fact, to concessions which called for special solemnity, to bulls of canonization, and to a few important constitutions such as the bull of Julius II. (18th July 1511), convoking the Fifth Lateran Council, or the confirmation of the Council of Trent by Pius IV. (26th Jan. 1564) By exception the bull conferring on Henry VIII. the title of 'Defender of the Faith' was made out in consistorial form and sealed with a golden *bulla*; but even such a document as the condemnation of the Pragmatic Sanction on 19th Dec. 1516, though decided upon in the Lateran Council itself, was executed in an ordinary bull; and it may in general be assumed that from the 14th cent. onwards, when the term 'bull' is used (as, for example, the 'bull of demarcation of Alexander VI.' determining the respective limits of the Portuguese and Spanish possessions in the Indies; the 'dispensation bull' for the marriage of Henry VIII. with his brother's widow; or the bull of Pius V. deposing Queen Elizabeth, etc.), the instrument so designated observed the following forms which for clearness' sake it will be well to recapitulate:

(1) The document begins with the Pope's name and 'servus servorum Dei' followed by a perpetuity clause or, less commonly in the case of a bull addressed to an individual, by the name of the addressee and salutation. Thus in the former case we have: 'Leo episcopus, servus servorum Dei, ad perpetuam rei memoriam'; or, in the latter: 'Leo episcopus, servus servorum Dei, dilecto filio suo N. salutem et apostolicam benedictionem.'—(2) The dating clause, which comes at the end of the whole, takes the following form and order: 'Datum Romae apud S. Petrum (or elsewhere) anno Incarnationis Dominicae MDCXX, quinto Kal. Maii, pontificatus nostri anno quinto.'—(3) To this was appended, by strings of silk or hemp, the *bulla* bearing the heads of SS. Peter and Paul, and on the other side the name of the reigning Pope.—(4) The document was engrossed upon thick parchment, in an archaic hand, which, after the modern Roman style of writing came into use, became very artificial and ungraceful, and was known as *scrittura bollatica*. During the 17th cent. this writing and its contractions became so unfamiliar that it was customary to issue a *transsumptum*, or copy in ordinary handwriting, along with the official document.—(5) After the substance of the bull, and before the dating clause, we commonly find inserted certain imprecatory clauses: 'Nulli ergo,' etc., and 'Si quis autem,' etc., though this rule was not invariable. It may be well to set down the precise form which these clauses ordinarily take: 'Nulli ergo omnino hominum liceat hanc paginam nostrae concessionis infringere vel ei ausu temerario contraire. Si quis autem hoc attemptare presumpserit, indignationem omnipotentis Dei et beatorum Petri et Pauli, apostolorum ejus, se noverit incursurum.' Sometimes these imprecatory clauses are further followed by directions as to the execution and publication of the bull, or again by clauses of derogation, beginning: 'Non obstantibus constitutionibus et ordinationibus apostolicis, privilegiis quoque et indultis,' etc.

Some of the distinctions here indicated, notably the presence or omission of the imprecatory clauses, correspond with a distinction in the bulls themselves, which in the 13th and subsequent centuries are commonly classified as either *tituli* or *mandamenta*. The *tituli* were for the most part acts of grace (*indulgentiae*), concessions of privileges, confirmations, decisions of points of doctrine or law, etc. On the other hand, the *mandamenta* represented the ordinary correspondence of the Holy See. They were orders of the Pope, commissions to conduct an inquiry or to reform abuses, letters written to communicate some important intelligence, or to invite the co-operation of temporal sovereigns, or to prescribe a line of conduct for clergy or laity. Their tenor nearly always includes the formula 'per apostolica scripta mandamus,' or 'precipiendo mandamus'—a phrase for which the words 'rogamus,' 'exhortamur,' 'monemus' are sometimes substituted. Of these two classes the *tituli*, though of less interest to the student of history, were the more solemn in form, the imprecatory clauses being rarely omitted. The writing was elegant, and carefully executed according to certain strict rules, while the *bulla* was attached with cords of red and yellow silk. On the other hand, the *mandamenta* showed both in substance and form that they were intended to serve a more temporary purpose. The writing was in a more flowing hand, less ornate and less carefully executed, the imprecatory clauses were generally omitted, and the *bulla* was attached with cords of hemp. Throughout we recognize the tendency to simplify and to make the issue of bulls, especially

those of an administrative nature, more expeditious. But though the formalities observed in the preparation of a *mandamentum* of the 14th cent. fell far short of what was needed for a consistorial bull, still even in the former the endorsements of the various officials of the chancery, mostly entered upon the *plica*, or fold of the parchment, show that it must have passed through a large number of different hands—*abbreviatores*, *scriptores*, *registratores*, and finally the department of the *bullatores*, who affixed the seal (see Baumgarten, *Aus Kanzlei und Kammer*, Freiburg, 1907). No wonder we find that under the pontificate of Eugenius IV. (1431) a new form of Papal letter of a more summary kind was instituted by the Holy See, and that henceforth this was commonly employed in all matters requiring despatch.

This was known as a 'brief,' and it soon almost entirely took the place of the earlier *mandamentum*. A brief was a document written upon fine vellum, and sealed, not with a leaden *bulla*, but with a wax seal bearing the imprint of the 'Fisherman's ring.' It was written in a fine cursive Roman hand, and at the head occurs simply the Pope's name standing by itself thus:

EUGENIUS PP. IIII.

Immediately below this, the Pope greets the addressee in the vocative, according to his rank and condition, *e.g.* 'Dilecte fili,' or 'Carissime in Christo fili,' or 'Venerabilis pater in Domino,' etc., with the salutation 'salutem et apostolicam benedictionem.' In constitutions of a more solemn and permanent character we often find, instead of this greeting, the formula, also already long familiar in bulls, 'ad perpetuam rei memoriam.' Another distinctive feature of briefs is the final clause expressing the date. It almost invariably takes this form: 'Datum Romae apud Sanctum Petrum, sub annulo Piscatoris, die IX Novembris MDXCII pont. nri. anno primo.' In contradistinction to the dating of bulls, which generally, though not invariably, at any rate down to the pontificate of Innocent XII., is to be referred to the years of the Incarnation, beginning 25th March, the years are here to be understood as those of the Nativity. Beneath the date the name of the Cardinal Secretary of Briefs is usually written as an attestation of authenticity.

With regard to the form of instrument chosen, let us note that this has little to do with the importance or binding force of any Papal pronouncement. The decretals, upon which the fabric of Canon Law was largely built up, almost invariably took the form of lesser bulls, *i.e.* simple letters or *mandamenta*. The first known *Bulla in Coena Domini*, containing the 'Reserved Cases' of the Holy See, issued by Urban V. in 1364, was a *mandamentum*. No doubt there was at times a very natural wish to impart some extraneous solemnity to documents of dogmatic importance. For example, the constitution of Benedict XII., beginning 'Benedictus Deus' (29th Jan. 1336)—which decides a controversy regarding the Beatific Vision, and contains the notable formula, 'Hac in perpetuum valitura constitutione auctoritate apostolica definimus'—was issued as a *titulus* with imprecatory clauses. The dispensation for the marriage of Henry VIII. with his brother's widow was drawn up first in great haste, and secretly transmitted to Spain as a brief, while it was afterwards more publicly expedited as a bull; but the brief, its authenticity once admitted, was of just the same force as the bull. So again, Benedict XIV., when compiling the first volume of his own pontifical acts, and sending it officially to the University of Bologna as a collection of authoritative rulings in the Canon Law, declares that it contains 'nostras Constitutiones, videlicet Bullas, et aliqua Brevia, Litteras Encyclicas et alia huiusmodi,' making no distinction between the authority attaching to these different instruments. So, in more modern times, the Society of Jesus, suppressed by Clement XIV. with a brief, was restored by Pius VII. in a bull; while Leo XIII. used a bull to re-establish the Catholic hierarchy in Scotland, though Pius IX., twenty-eight years before, had issued only a brief to effect the same purpose in England. The seal with the 'Fisherman's ring,' which is the distinctive mark of the brief, was formerly always impressed upon red wax within a loop formed by a twisted strip of parchment, and arranged in such a way that the seal served at the same time to close and secure the folded sheet of vellum to which it was affixed. The 'Fisherman's ring' is mentioned in 1265 as used by the Pope to authenticate his private correspondence, and is probably much older. The earliest existing impression is said to have been discovered in the treasury of the Sancta Sanctorum at the Lateran. It belongs to the time of Nicholas III. (1277-1280), and represents St. Peter fishing with a rod and line; but the identification seems somewhat doubtful. In the later examples St. Peter is represented in a boat drawing in the net.

In quite modern times some notable modifications have taken place in the rules of the Papal chancery regarding the issue of bulls and briefs. Since 1842 the impression of the 'Fisherman's ring' upon red wax attached to briefs has given way to a stamp in red ink bearing the same device. In the case of bulls, the *scrittura bollatica* engrossed upon great sheets of parchment has for ordinary purposes been discarded—this took place at the beginning of the pontificate of Leo XIII. in 1878—and the document is now written in the same legible Roman hand which is used for briefs, while the leaden *bulla* has given way in most cases to a stamp in red ink that can more conveniently be sent by post. It is likely also that the complicated formalities, which till quite lately attended the ordinary expedition of bulls by the *via di cancelleria*, will be much simplified in consequence of the recent re-organization of the Roman Curia.

Other Apostolic Letters.—As a further consequence of the delays and complications attending the issue of bulls, another new kind of instrument came into use at the end of the 15th cent. under Innocent VIII. It was a species of brief known as a *motu proprio*, and it was without any authenticating seal. As its name imports, it professed to be a document issued by the Pontiff of his own initiative, without any instance being made to him by interested parties. The documents of this class, which continued to be very common during the 16th cent., closely resembled briefs in their general features, but there are differences in the manner of dating, and, of course, there is no mention of the 'Fisherman's ring.' On the other hand, the words 'motu proprio' are always introduced, and occur not uncommonly as the initial words of the document. For the most part these *motu proprios* were concerned with the administration, ecclesiastical or civil, of the city of Rome and the government of the Papal States, and, in contrast to the more formal bulls and briefs, were frequently couched in Italian. From the insistence which their form seemed to lay upon the Papal initiative, they were regarded by foreign governments, notably by that of France, with disfavour, and treated as an encroachment upon the liberties of the Gallican Church.

In more modern times, the Roman Pontiffs, when wishing to impart instruction to the clergy and laity of the Church over which they rule, especially in matters which require somewhat elaborate treatment, have most commonly had recourse to an

'encyclical.' As the term imports, this is in form a circular letter intended to be passed on from one to another of a group of persons, but in practice it is a letter addressed to all the bishops in communion with the Holy See, or at least to all the bishops of a single district or province. The term 'encyclical letter' has been in use from an early date, but it was not commonly adopted for Papal documents before the 18th century. Since then it has come increasingly into favour, and Pius IX., Leo XIII., and Pius X. have issued numerous and very lengthy encyclicals, dealing not only with dogmatic questions, but also with problems that are primarily social and ethical in their scope. One of the most famous of these encyclicals was that of Pius IX., *Quanta cura* (8th Dec. 1864), of which the main purport was to condemn the principles of Naturalism (*i.e.* the exclusion of religion from the government of human society), to denounce Socialism and Communism, and to vindicate the sacred rights of family life; but it is perhaps principally remembered on account of the 'Syllabus' of condemned errors which was published along with it. Leo XIII., again, published a long and very remarkable series of encyclicals, dealing with a number of modern questions, *e.g.* the encyclical *Immutabilis* (21st Apr. 1878), on the evils of the times; *Arcanum divinae sapientiae* (10th Feb. 1880), on Christian marriage and family life; *Diuturnum illud* (29th June 1881), on the origin of civil authority; *Immortale Dei* (1st Nov. 1885), on the Christian constitution of States; *Libertas praestantissimum* (20th June 1881), on true liberty; *Rerum novarum* (16th May 1891), on the Labour question; and *Satis cognitum* (29th June 1896), on religious unity. Most of these utterances have been collected and translated, *e.g.* by J. Wynne in *The Great Encyclical Letters of Leo XIII.* (New York, 1903), and by W. Eyre, *The Pope and the People* (London, 1897).

The present Pope, Pius X., has also shown special favour for this form of manifesto, and many of his instructions have taken this shape: *e.g.* his first letter to the clergy and faithful of France, *Vehementer nos* (11th Feb. 1906); and the condemnation of Modernism, *Pascendi dominici gregis* (8th Sept. 1907), with very many others. In form an encyclical is simply a letter, which in its *inscriptio* mentions the 'Patriarchs, Primates, Archbishops, Bishops, and other local Ordinaries,' and concludes with the Apostolic blessing and a simple date including the year of the pontificate. The Pope's name 'Pius PP. X.' appears at the foot. It is generally held by Catholic theologians that the mere fact of an encyclical being addressed to the whole of Christendom does not constitute it an *ex cathedra* pronouncement, even if it deals with dogmatic matters. The degree in which the infallible *magisterium* of the Papacy is involved must be judged from the terms used in the document itself, and from attendant circumstances. This question is discussed with some fullness in Choupin, *Valeur et décisions doctrinales et disciplinaires du Saint-Siège* (Paris, 1908).

Another form of Papal utterance which calls for notice is the 'allocution,' which is an address delivered by the Pontiff to the Cardinals assembled in secret consistory. This address is sometimes printed and published by order of the Pope, who chooses this way of making known his judgment or wishes with regard to questions, often semi-political, which are of pressing importance. But, of course, this pronouncement is not a Papal letter, and cannot even in a wider sense be classed as a bull.

The remaining words, which are used to describe documents emanating from the Papal chancery, are of a general character, and for the most part rather loosely used. For example, almost any kind of instrument may be described as a 'rescript,' but strictly the term should be limited to some form of answer to an application addressed to the Holy See. Such answers in early times often began with the words, 'Significavit nobis dilectus filius,' and ended with the formula, 'Deus te incolumem servet.' Another very general word is 'constitution,' and this may be correctly applied to any written act which determines some question submitted, or lays down a rule to be followed.

With reference to the collection of Papal bulls and letters, it is to be noted that all the extant editions of the *Bullarium Romanum*, so far as regards mediæval documents, are of a very unsatisfactory character. The *Bullarium Romanum* was originally nothing but a private compilation, first formed by one Laertius Cherubini at the end of the 16th century. Its purpose was to print certain Papal constitutions which had been issued since the formation of the *Corpus Juris Canonici*, and which, though of great importance to students of law, were not accessible in any collected form. Naturally such a work did not concern itself much with the Papal letters of remote ages. It was the recent utterances which were important for the compiler's purpose. The various editions which followed greatly enlarged the collection and brought it up to date; but even in the scholarly work of Cocquelines, who edited the great *Bullarium Romanum* (printed in Rome in 32 volumes, between 1739 and 1762), nothing but the most meagre gleanings are presented of the Papal letters issued during the first 1500 years of the Church's history. For these early letters the reader must be referred to Coustant, *Epistolae Pontificum Romanorum* (extending to the year 440), and to Thiele's continuation (which brought the collection down to 553), but, most conveniently, to the already mentioned *Regesta* of Jaffe-Löwenfeld with the continuation by Potthast (which covers the whole period from the beginning to the 14th century). Special attention has, of course, been paid to certain isolated pontificates of importance. For example, the letters of St. Gregory the Great have been edited with great care in the quarto series of the *MGH*, by P. Ewald and L. Hartmann, while the Papal letters to Charlemagne and Louis the Pious have been studied by Carl Hampe, also in the *MGH*. Again, under the title of *Italia Pontificia*, a most thorough piece of work has been undertaken by P. F. Kehr in calendaring the 'privileges' and other Papal documents connected with the churches of Italy. Further, we must note that the pontificate of Innocent III., from which time onward, as stated above, the Papal *Regesta* are preserved, marks a period of much fuller knowledge. The *Regesta* of Innocent III. and of Honorius III., in part, have been published in the *Patrology* of Migne, while that of Honorius III. has subsequently been re-edited. None, however, of these Papal *Regesta* seems to contain copies of all the bulls issued during any pontificate, and consequently the fact that any document is lacking in the official register is no sufficient proof of its spuriousness. It is probable that for such registration, constituting, as it did, an additional safeguard of authenticity in case of dispute, a fee was demanded, and that registration was denied to those who were unwilling to pay the fee. During recent years a great effort has been made to publish the *Regesta* of the remaining Popes of the 13th and following centuries. The chief work has been done by the École Française de Rome with results which may be thus summarized:

Regesta completely edited.

Benedict XI. (1303–1304), ed. C. Grandjean; 1 vol.
Nicholas IV. (1288–1292), ed. E. Langlois; 2 vols.
Honorius IV. (1285–1287), ed. M. Prou; 1 vol.

Regesta in progress.

Gregory IX. (1227–1241), ed. L. Auvray; 3 vols. (two completed).
Innocent IV. (1243–1254), ed. E. Berger; 4 vols. (three completed).
Alexander IV. (1254–1261), ed. Bourel de la Roncière and others; 2 vols. (one nearly complete).
Urban IV. (1261–1264), ed. J. Guiraud; 4 vols. (three completed).
Clement IV. (1265–1268), ed. E. Jordan; 1 vol. (nearly complete).
Gregory X. and John XXI. (1271–1277), ed. J. Guiraud and L. Cadier; 1 vol. (nearly complete).
Nicholas III. (1277–1280), ed. J. Gay; 1 vol. (begun).
Martin IV. (1281–1285), ed. ?; 1 vol. (begun).
Boniface VIII. (1294–1303), ed. G. Digard, M. Faucon, A. Thomas; 3 vols. (1 vol. complete).

Besides these, the École Française de Rome has undertaken the publication of the letters of the Avignon Popes which have reference to French affairs. Amongst these considerable progress has been made with the letters of John XXII. (1316–1334) and Benedict XII. (1334–1342). Further, the École Belge de Rome has recently begun the publication of the *Regesta* of Clement VI. under the editorship of Dom U. Berlière.

As regards England in particular, an important undertaking has been for some time in progress under the general title of *A Calendar of Entries in the Papal Registers relating to Great Britain and Ireland*. This work, begun by the late W. H. Bliss and continued by J. A. Twemlow, has now extended to nine volumes, bringing the record down to the middle of the 15th cent., and it provides short summaries in English of all documents in the Roman *Regesta* which have any reference to the British Isles.

Amongst other isolated efforts may be mentioned the Benedictine edition of the *Regesta* of Clement v. (1305–1314), and Cardinal Hergenröther's incomplete calendar of the bulls and other documents of Leo x. At a much earlier period, A. Theiner, librarian of the Vatican, published, chiefly from the *Regesta*, large numbers of Papal bulls, etc., dealing with various countries of Europe—the British Isles, Hungary, Poland, Lithuania, etc., among the number. Special *Bullaria*, chiefly collections of 'privileges,' to which formerly the name *Mare Magnum* was often applied, have also been published for most of the great Religious Orders and for some of the Roman Congregations.

LITERATURE.—Regarded as a branch of the science of 'Diplomatics,' the subject of Papal bulls and briefs possesses an abundant literature. A very large number of spurious documents of this kind have always been in existence, and the detection of these has exercised the acumen of scholars from quite an early period. Naturally the Popes themselves have at various times prohibited the fabrication of Papal letters and 'privileges,' under the severest spiritual penalties; and many references to the subject will be found among the bulls of such Pontiffs as Alexander III. and Innocent III. The foundations of the true science of diplomatic criticism were laid in Mabillon's great work, *De Re Diplomatica* (1681–1704), and this was further developed and systematised a little later by his fellow Benedictines, Dom Toustain and Dom Tassin, in their *Nouveau Traité de Diplomatique*, in six volumes quarto. For a compendious modern introduction to the subject, the reader may most conveniently be referred to A. Giry, *Manuel de Diplomatique* (Paris, 1894), and to the section on Papal diplomatics contributed by Schmitz-Kallenberg to H. Meister's *Grundriss der Geschichtswissenschaft* (Leipzig, 1906, vol. i. pp. 172–230), both of which works contain ample bibliographies. Besides the treatises mentioned in the course of the foregoing article, special reference should be made to H. Bresslau's *Handbuch der Urkundenlehre*, still, unfortunately, incomplete; to Pflugk-Harttung's great collection of facsimiles, *Specimina Selecta Chartarum Pontificum Romanorum* (3 vols., Stuttgart, 1887); and to books and papers by P. Kehr, Tangl, Diekamp, Mühlbacher, and others. Many of these contributions have appeared in the *Mittheil. des Instituts f. Österreichs Geschichtsforschung*, or in the Göttingen *Nachrichten* (Phil.-hist. Classe). The newly founded *Archiv für Urkundenforschung*, edited by Brandi, also contains some most valuable work of this kind. For the practical working of the Papal chancery, the *Practica Cancellariae Apostolicae*, edited by Schmitz-Kallenberg (Munich, 1904); the work of Baumgarten, *Aus Kanzlei und Kammer* (Freiburg, 1907); and that of E. von Ottenthal, *Regulae Cancellariae Apostolicae* (Innsbruck, 1888), are of great importance. Good work of the same kind has also been done by French scholars, notably M. Léopold Delisle and the Comte de Mas Latrie.

From the legal point of view, all the larger treatises which touch on the sources of the Canon Law devote a certain amount of space to the question of Papal bulls and letters. It will be sufficient to mention here (besides the great works of Phillips, Hinschius, von Scherer, and Wernz): Maassen, *Gesch. der Quellen und Lit. d. can. Rechts*, i. (1870); J. F. von Schulte, *Gesch. der Quellen u. Lit. des can. Rechts*, 3 vols. (1875–80); A. Tardif, *Histoire des sources du droit canonique* (1887); C. Mirbt, *Quellen zur Gesch. des Papsttums und des röm. Katholizismus* (1901). Much useful information about the building up of Roman Case Law will be found in F. W. Maitland's *Roman Canon Law in the Church of England* (1898). The Catholic standpoint regarding the pronouncements of such mediæval Popes as Gregory VII., Innocent III., and Boniface VIII. may be gathered from Hergenröther's *Catholic Church and Christian State* (Eng. tr., Lond. 1876)—a work which grew out of the 'Janus' controversy; or, better, from the various articles in the *Staatslexikon* (Herder, Freiburg), edited by Bruder and Bachem, the 3rd ed. of which is now in course of publication.

HERBERT THURSTON.

BUNYAN.—I. Life.—John Bunyan, the greatest of allegorists, and also the greatest exponent of the Puritan doctrine in popular form, was born at Elstow near Bedford in 1628, and died in London in 1688. His life thus covered the troubled period of the Civil War, the Commonwealth, and the Restoration, and ended on the eve of the Revolution. His origin was humble,—'low and inconsiderable,' he calls it,—his father being a tinker or itinerant brazier. He himself adopted the same trade. He learned to read and write, 'according to the rate of other poor men's children,' but his small stock of education was quickly lost. He seems to have had a somewhat nervous and morbid childhood, disturbed by dreams and fears. About 1645, when he was still but a lad, he served as a soldier. He himself does not say on which side he was enrolled, and his biographers have either followed their own fancy in the matter or have been content to regard the point as undecided. But probably Dr. Brown's carefully considered verdict would not now be disputed, based as it is upon a survey of the local circumstances and the 'strong set of the stream in the Parliamentary direction': 'It seems scarcely likely that he would think his way to independent conclusions so wide apart from those of his neighbours, break through all the carefully kept lines of the Parliamentary forces . . . and join the Royalist army with the king' (*Life*, p. 49). Bunyan owed much to his first wife. She restored to him the simple education he had lost by disuse; and she brought to him his first impressions of practical religion. They were very poor,—'not having so much household stuff as a dish or a spoon betwixt us both,'—but she brought with her two little books. The titles of these are noteworthy. They are seeds of a harvest. One was *The Plaine Man's Path-way to Heaven, Wherein every man may clearly see, whether he shall be saved or damned*, by Arthur Dent. The other was Lewis Bayly's well-known book, *The Practice of Pietie, directing a Christian how to walke that he may please God*. These little books must have left a deep mark upon the young man's mind. The former is written entirely in dialogue form. The latter, though somewhat heavy and common-place as a whole, has near its close a long 'colloquie' between Christ and the soul, so simple, tender, and beautiful that Bunyan himself might almost have written it.* We have possibly here the germ of his love for dialogue, both in allegory and in preaching.

After his marriage there came a period of spiritual upheaval lasting about four years, and recorded with wonderful power and skill in his *Grace Abounding to the Chief of Sinners* (1666). This book is the key to all his other writings: it is his experience compressed; the other books are his experience writ large, for in his case, as in that of St. Paul, doctrine and experience are in continual contact. No summary can do justice to the vividness of this great little autobiography; and this period of his life, when his soul was in the throes of birth, can be suitably described only in his own words. It was a period of many difficulties about such matters as election, the day of grace, the sin against the Holy Ghost; of many sacrifices—one game and pleasure after another being given up in the hope of finding peace; of many unsatisfied yearnings and aspirations,—'Oh! how I now loved those words that spake of a Christian's calling! as when the Lord said to one, Follow me; and to another, Come after me: and oh, thought I, that he would say so to me too: how gladly would I run after him!' It was a period of swift alternations of feeling, ranging from moments of an ecstatic joy—which lasted all too short a time, and was quickly caught up again, like Peter's sheet, to heaven—to moods of morbid self-torture, as when voices seemed to tempt him to sell Christ and he persuaded himself that he had sold his Saviour.† He himself admits that there was something distraught and unbalanced in his condition at this time: 'This is the man that hath his dwelling among the tombs with the dead; that

* '. . . *Soule*: Lord, wherefore wouldest thou be lift up upon a Crosse? *Christ*: That I might lift thee up with me to heaven. *S.*: Lord, why wouldest thou have thine armes nayled abroad? *C.*: That I might embrace thee more lovingly, my sweet soule. *S.*: Lord, wherefore was thy side opened with a Speare? *C.*: That thou mightest have a way to come nearer my heart. *S.*: Lord, wherefore wouldst thou be buried? *C.*: That thy sinnes might never rise up in Iudgement against thee. . .'

† Cf. the 'Meditation upon Peep of Day' from *A Book for Boys and Girls*:

'I oft, though it be peep of day, don't know
Whether 'tis Night, whether 'tis Day or no.
I fancy that I see a little light;
But cannot yet distinguish day from night.
I hope, I doubt, but steady yet I be not,
I am not at a point, the Sun I see not.
Thus 'tis with such, who Grace but now possest,
They know not yet, if they are curst or blest.'

is always crying out and cutting himself with stones.' But the essence of his case did not lie in its morbid extremes, but in a genuine conviction of sin which was the Divine preparation for the comfort of the Cross. Gradually he found his way to peace, the two chief influences being Luther's commentary upon *Galatians*,—'most fit for a wounded conscience,'—and the ministry of John Gifford. This man had formerly been a loose liver and an officer in the Royalist army, then a physician in Bedford; finally from 1650, being now a changed man, he became the pastor of the newly formed Nonconformist congregation in Bedford. He was doubtless the prototype of 'Evangelist'; he helped Bunyan the pilgrim towards the wicket gate and the shining light, and received him into the fellowship of the congregation in 1653. From that year until 1660 the congregation met in St. John's Church at Bedford, for the experiment of a comprehensive national Church was being tried under Cromwell, and Gifford had been presented to the living of St. John's.

In 1655, Bunyan removed from Elstow to Bedford. In the same year he lost his first wife, and was also called by his brethren to open his lips as a preacher: 'They desired me, and that with much earnestness, that I would be willing at sometimes to take in hand, in one of the meetings, to speak a word of exhortation unto them.' His message proved immediately acceptable: people came by hundreds to hear him; during the period of tolerance he preached more than once even in parish churches. But the Restoration brought the Act of Uniformity. Even as early as March 1658 there had been trouble. The minutes of the Bedford church mention a meeting 'for counsaile what to doe with respect to the indictment against bro: Bunyan at ye Assizes for preaching at Eaton.' Nothing seems to have come of that, but 1660 brought his arrest and the beginning of his imprisonment. There has been much uncertainty as to the number and places of his incarcerations, but once more Dr. Brown's careful weighing of evidence must decide the matter, reinforced as it has been by the discovery of the actual warrant of arrest for his second and shorter imprisonment in the end of 1675. The first imprisonment was in the County Gaol at Bedford, and lasted for twelve years, with a break in the middle, and with a considerable amount of liberty at times, varied with periods of greater strictness. He made tagged laces for his own support; wrote *Grace Abounding* and several other books; and preached in the gaol, and occasionally outside it. The second was in the Town Gaol on Bedford Bridge: it lasted six months, and produced the first part of *The Pilgrim's Progress*. When the first imprisonment drew to a close, the prisoner found new and enlarged service waiting for him. The following appears in the records of the Bedford church for 21st Jan. 1672:

'After much seeking God by prayer and sober conference formerly had, the Congregation did at this meeting with joynt consent (signifyed by solemne lifting up of their hands) call forth and appoint our brother John Bunyan to the pastorall office or eldership. And he, accepting thereof, gave up himself to serve Christ and his Church in that charge; and received of the Elders the right hand of fellowship.'

An orchard was purchased, and a barn that stood upon it was converted into a meeting-place, which was the home of the congregation until long after Bunyan's death.

From this point onwards his fame as a preacher, aided by his growing popularity as a writer, spread far and wide. He became known as 'Bishop Bunyan,' and travelled in many directions through England. He was often in London, where crowds would gather to hear him even at 7 o'clock in the morning. Some of the secrets of his success as a preacher may be guessed from his printed sermons, even though these in their revised and enlarged form may differ somewhat from the spoken word. He used strong and simple language,—his whole mind being saturated with the English Bible. He spoke with intense conviction, especially at first, upon the guilt and power of sin: 'I preached what I felt, what I smartingly did feel. . . . I went myself in chains to preach to them in chains, and carried that fire in my own conscience that I persuaded them to be aware of.' Later he gave more emphasis to 'Jesus Christ in all His offices, relations, and benefits,' and 'the mystery of the union of Christ'; but still, he says, 'I preached what I saw and felt.' There must have been a strongly dramatic element in his preaching, as in his enlargement of St. Peter's words, 'Repent every one of you,' in *The Jerusalem Sinner Saved*:

'*Objector*: But I was one of them that plotted to take away his life. May I be saved by him? *Peter*: Every one of you. *Obj.*: But I was one of them that bare false witness against him. Is there grace for me? *Peter*: For every one of you. *Obj.*: But I was one of them that cried out, Crucify him, crucify him; and desired that Barabbas the murderer might live, rather than him. What will become of me, think you? *Peter*: I am to preach repentance and remission of sins to every one of you, says Peter. . . Oh! what a blessed *Every one of you* is here!'

And his message must have been full of a limitless pity and tenderness, the true spirit of an evangelist, the spirit of the Christ whose mercy he had tasted for himself. John Owen is said to have remarked to Charles II. that he would gladly give up all his learning for the tinker's power of reaching the heart, and it is very evident that one of Bunyan's secrets of reaching the heart was just his intense compassion. 'Mark Rutherford,' himself no mean stylist, selects the following passage from *The Heavenly Footman* as unmatched in its simple eloquence:

'To encourage thee a little farther, set to the work, and when thou hast run thyself down weary, then the Lord Jesus will take thee up and carry thee. Is not this enough to make any poor soul begin his race? Thou perhaps cryest, O but I am feeble, I am lame, etc.; well, but Christ hath a bosom; consider, therefore, when thou hast run thyself down weary, he will put thee in his bosom. He shall gather the lambs with his arms, and carry them in his bosom, and shall gently lead those that are with young. This is the way that fathers take to encourage their children, saying: Run, sweet babe, while thou art weary, and then I will take thee up and carry thee. He will gather his lambs with his arms and carry them in his bosom; when they are weary, they shall ride.'

There is more than eloquence in such a passage: there is the tenderness of a true shepherd of souls.

In addition to his wide-spread work as preacher and evangelist, Bunyan played a not unimportant part in the earlier history of the Baptist denomination, as an advocate of open communion. The church of which he was pastor had been founded upon a broad basis:

'The principle upon which they thus entered into fellowship one with another, and upon which they did afterwards receive those that were added to their body and fellowship, was *faith in Christ and holiness of life* without respect to this or that circumstance or opinion in outward and circumstantiall things.'

So runs the old church record, and both Gifford and Bunyan seem to have been in sympathy with the basis. Dr. Brown says that, though Gifford is often called a Baptist, there is no evidence to prove him such; and though Bunyan was himself baptized by immersion in the Ouse, he was drawn into controversy with some of the stricter Baptists who found fault with him for his principle of open communion. The substance of his treatise, *Differences in Judgment about Water Baptism no bar to Communion* (1673), and of various other pamphlets and passages, amounts to this—that the point is one for the judgment of the individual, and that the Church dare not reject those who are true believers, whatever their opinion on this point. 'Christ, not baptism, is the way to the sheepfold. . . . Baptism also may be abused, and is, when more is laid upon it by us than is commanded by God.' He gives us his own preference and practice

in a phrase in *The Heavenly Footman*, when, after bidding his readers beware of Quakers, Ranters, Freewillers, he adds, 'Also do not have too much company with some Anabaptists, though I go under that name myself.' It is a little surprising to find that one who bore the name 'Anabaptist' should have two of his children christened after his own immersion—one at Elstow in 1654 and one at St. Cuthbert's, Bedford, in 1672. Can it mean that neither Bunyan's first wife, nor his second, whom he married in 1660 and who proved herself during his tribulation to be a woman of some courage and character, shared his personal view, and that he did not care enough about the matter to insist upon his own preference?

2. Works. — According to the list given by Dr. Brown, based upon that of Bunyan's friend, Charles Doe, Bunyan produced in all 60 works, one for each year of his life. But this includes such items as *A Map of Salvation*, and various tracts and poetical pieces of small bulk, as well as the longer controversial, evangelistic, and allegorical works. *Grace Abounding* is referred to above. Of the others, apart from the three greatest, the most noteworthy are: *Some Gospel-Truths opened*, interesting now chiefly as Bunyan's first book, published in 1656, a fiery protest against Quaker Mysticism, clear in its style and orderly in its arrangement, but giving a hint only in an occasional phrase of the greater riches that were to come; the various books, such as *Come and Welcome to Jesus Christ*, *The Jerusalem Sinner Saved*, and *The Heavenly Footman*, which preserve for us the style and substance of Bunyan's actual preaching; his Catechism, *Instructions for the Ignorant*; and *A Book for Boys and Girls, or Country Rhimes for Children*. This last is quaint and valuable in itself, and is perhaps the *fons et origo* of a slender but sparkling literary stream which has flowed intermittently through the generations, and has not yet spent itself—witness *The Child's Garden of Verses*. Probably the modern child, accustomed to the skilful and dainty catering of R. L. Stevenson and others, would count Bunyan's verses, except in one or two cases, somewhat heavy and didactic. Yet to the boys and girls of the 17th cent. these 'rhimes' may have been almost as much of a relief and joy as R. L. S. and Edward Lear to the happier children of the later 19th century.

Bunyan's poetry has been severely criticised. It may be admitted that in verse he seldom found his liberty, and that his more extended poems are doggerel. Yet in this region Bunyan is better worth knowing than the critics would have us believe. Many of his verses are at least melodious, pithy, and memorable. And something is to be said for the poetic quality of the man who wrote the song of the Shepherd Boy, and these lines *Upon the Swallow*:

'This pretty Bird, Oh! how she flies and sings!
But could she do so if she had not Wings?
Her Wings bespeak my Faith, her Songs my Peace;
When I believe and sing, my Doubtings cease.'

The first part of *The Pilgrim's Progress* was published in 1678, the second part about seven years later. The book was an immediate and amazing success. Three editions of the first part were sold in a year, and in the second and third of these the original scheme was wisely added to — Worldly Wiseman, Mr. By-end's relations, and Giant Despair's wife being among these happy afterthoughts. In Bunyan's lifetime 100,000 copies were sold. It is the greatest of allegories. It is the fine flower of Puritan theology and experience. It may be called the first great English novel. 'John Bunyan may pass for the father of our novelists,' says Hallam. Into it, with a pen that had found freedom and mastery, he put all his marvellous powers of observation: the man who has given us Mr. Talkative and Mr. Fearing went about the world with his eyes and ears open. Into it he also put all his own experience, so rich in sorrows and in joys. The temptation is strong to suggest originals for the allegorical scenes and personages. Was Elstow Abbey the House Beautiful, and was the Slough of Despond suggested by the miry fields near Bunyan's birthplace? Was Judge Jeffreys or Sir John Kelynge the original of Judge Hate-good? Was Faithful's voice, overheard in the valley, the voice of Martin Luther? And was Christiana Bunyan's second wife and Mercy his first? These things are better left vague. But we touch the real source of the whole matter when we study Bunyan's own experience. Here, *e.g.*, is the original of the Slough of Despond in *Grace Abounding*: 'I would in these days, often in my greatest agonies, even flounce towards the promise, as the horses do towards sound ground, that yet stick in the mire.' There have been very varying judgments as to the value of the second part of *The Pilgrim's Progress*. Its geographical interest is, of course, less than that of the first, because the story leads the reader along a familiar path; and the dialogue is in places weaker. But Mr. Froude's severe disparagement is entirely misleading, if only because of the extraordinary richness of the second part as a book of character. Mr. Brisk, Mr. Honest, Greatheart, Mercy, Mr. Fearing, Madam Bubble, and the rest are inimitable and immortal. But, indeed, criticism of *The Pilgrim's Progress*, if it be based on sympathy, soon loses itself in affection. Sir Walter Scott speaks for the multitude of Bunyan's readers when he says:

'John Bunyan's parable must be dear to many, as to us, from the recollection that in youth they were endued with permission to peruse it at times when all studies of a nature merely entertaining were prohibited' (*Quart. Rev.*, Oct. 1830).*

No other book except the Bible so unites the hearts of young and old, learned and simple, the lover of beauty and the lover of sanctity.

In *The Life and Death of Mr. Badman*, published in 1680, Bunyan made an attempt to tell the opposite story, and describe a pilgrimage from bad to worse. The attempt is not very successful. It is retarded by being cast in dialogue form throughout; it is weighted with amazing anecdotes, which, however interesting from their mere incredibility, distract attention from the main story; it loses itself in tedious discussions, *e.g.*, on the difference between cursing and swearing. But the pen that created the Pilgrim had not lost all its cunning. There are many passages acute in observation and happy in expression, like the phrase about Mr. Badman's 'mournful, sugared letters' to his creditors; and the book is full of Bunyan's keen observation and knowledge of life: 'I think I may truly say that, to the best of my remembrance, all the things that I here discourse of, I mean as to matters of fact, have been acted upon the stage of this world, even many times before mine eyes.' And the book has value still as a picture of the rougher and uglier side of English life in Bunyan's time. Perhaps the author's artistic restraint is never more finely exhibited than in giving Mr. Badman a quiet and peaceable deathbed.

In *The Holy War* (1682) Bunyan rose again almost to his own loftiest level, and created another allegory second only to *The Pilgrim's Progress*. The task in this case was more difficult. Though there is more Biblical foundation for the figure of a war than for that of a pilgrimage, the former is less easy to draw out into a connected story. Defects and inconsistencies are easily observable, *e.g.*, Mansoul seems now the soul of a man, now the soul of humanity. It is dangerous also to bring

* Cf. Macaulay in his Essay on 'John Bunyan': 'That wonderful book, while it obtains admiration from the most fastidious critics, is loved by those who are too simple to admire it.'

the Persons of the Trinity into action and dialogne. But if there be defects in construction, there is not a weak page in the actual writing, and the style throughout seems mysteriously to take on a quality kindred to its theme—something of the strength of a rampart, something of the sound of a trumpet. Once more observation and experience are manifest continually. Bunyan's soldiering serves him well in his battle scenes. His heart remembers how this sort of thing is done: the evolutions of Emmanuel's army, 'the handling of their arms and managing of their weapons of war, were marvellously taking to Mansoul and me.' The new modelling of Mansoul is a reflexion of the changes that were compulsorily brought about in the civic arrangements of towns like Bedford as Commonwealth or Monarchy got the upper hand. The setting up of a ministry in Mansoul is also full of echoes of times when the ecclesiastical foundations were unsettled, and contending ideals enjoyed alternate periods of supremacy. Bunyan handles all this with exhaustless skill and ingenuity: *e.g.*, there is a whole analysis of persecution, clear and complete, packed into one corner of the plot. When the Bloodmen were taken, they were had before the Prince, and

> 'he found them to be of three several counties, though they all came out of one land. One sort of them came out of Blindmanshire, and they were such as did ignorantly what they did. Another sort of them came out of Blindsealshire, and they did superstitiously what they did. The third sort of them came out of the town of Malice, in the county of Envy, and they did what they did out of spite and implacableness.'

In the scheme of this allegory, there is naturally less room for character-drawing than in the other, yet who can forget that deaf and angry man, old Mr. Prejudice, or the darling of Diabolus, Captain Anything? Moreover, in the dealings between Emmanuel and Mansoul there appears, as in all Bunyan ever wrote, his passionate love for his Lord, and the Lord's love and pity for his sinful but aspiring servants.

3. **Place and influence.**—Bunyan's influence was immediate and enormous, not in his own denomination only, not in his own country only. *The Pilgrim's Progress* was translated into Welsh in 1688, into Dutch in 1682, into German in 1703, into French in 1685. Bunyan's empire has grown steadily with the passing generations, mainly through this his best known book: perhaps the best criterion of its extent to-day is the fact that in the summer of 1909 the Religious Tract Society announces versions in 112 different languages and dialects. Even such an edition as that produced by J. M. Neale in 1853, with insertions and alterations in the worst possible taste, designed to make the book teach a different scheme of doctrine from that of its author, is a proof of Bunyan's wide sovereignty and of the appeal he makes to minds of many different types. In addition to the qualities alluded to incidentally above—his pictorial style, uniting the young and the old; his strong, simple, Biblical English, uniting the educated and the unlearned; his knowledge of life; his faithfulness to his own deep experience; his historical position as our great exponent of Puritanism at its best—the following may be mentioned as among the secrets of an influence so wide and enduring:

(*a*) Bunyan's real *originality*.* This quality may be claimed for him even apart from the question of borrowed materials. Shakespeare can be original even when he is working over the story of some old chronicler: resurrection can be so managed as to be equivalent to creation. Much ingenuity, however, has been expended on the attempt to find a source for the Pilgrim-story. Guillaume de Guileville's *Le Pèlerinage de l'Homme* in Lydgate's version; Bernard's *The Isle of Man, or the Legal Proceedings in Manshire against Sin*; and other existing allegories or romances have been suggested as the source of Bunyan's inspiration; or it is alleged that he found his seed-thought, say, in *The Plaine Man's Path-way*, or in the letter of an Italian martyr in Foxe's *Booke of Martyrs*, which says, 'I will travel up to the New Jerusalem. . . . Behold, I have entered already on my journey.' Probably Bunyan gathered seed-thoughts everywhere, and plagiarized prodigiously from the open book of life. But the question of his literary originality is very carefully examined in the preface to Furnivall's edition of Lydgate's *de Guileville*, and the wise conclusion reached is this: 'In one Book alone, the Bible, supplemented by Bunyan's own experience, we may trace all the influences necessary for the production of *The Pilgrim's Progress*.'

(*b*) His *practical sagacity and ethical force*. Bunyan the evangelist does not altogether hide Bunyan the moralist: the two are one. 'He was securely weighted with unshifting ballast, the ballast of common sense.' The story of Mr. Badman's fraudulent bankruptcy shows how Bunyan had an eye for the insincerities and corruptions of the commercial world. Some of his counsels are startlingly close to modern problems of commercial morality: 'Art thou a seller and do things grow cheap? Set not thy hand to help or hold them up higher. Art thou a buyer and do things grow dear? Use no cunning or deceitful language to pull them down.' There is no thought more characteristic of Bunyan, in spite of his lurid pictures of the agonies of the lost, than this—that sin is hell; sin is the worm; sin is the fire; it would be better to be sinless in hell than to be a sinner in heaven.

(*c*) His *broad and genial humanity*. This shows itself in many ways,—not least in his kindly and hearty humour,—his portraits, such as those of Mr. Brisk, Talkative, Sir Having Greedy, Christiana and her comrades dancing over the fate of Giant Despair, his skill in inventing amusing and delightful names, and his way of poking fun at those whom he would gently rebuke. Still more strikingly does his breadth of humanity come out in his whole management of the Pilgrim's story. There are so few ecclesiastical waymarks that one would never guess the author's own position, and when Giant Pope is omitted the book can be used with profit and pleasure by Catholic readers. He avoids the temptation to which religious teachers of strongly marked experience often yield—the temptation to think that all others must walk in their footprints in order to be safe. This is finely brought out in the contrast between the experiences of Christian and Faithful in the first part, and in the room that is found in the second part for a rich variety of character and experience.

(*d*) *The note of the Evangel.* The most intimate and enduring secret of the hold that Bunyan has over multitudes of men is this, that he was so great a lover of men, and so passionately loyal to the supreme Lover of men. His friend Doe calls him 'a great convert'; and, because he was so great and so thorough a convert, he is a great exponent of the motives that have supreme converting power. Hence *The Pilgrim's Progress* is, as Coleridge calls

* Hallam, 'that niggard of applause,' has this: 'His success in a line of composition like the spiritual romance or allegory, which seems to have been frigid and unreadable in the few instances where it had been attempted, is doubtless enhanced by his want of all learning and his low station in life. He was therefore rarely, if ever, an imitator; he was never enchained by rules. Bunyan possessed in a remarkable degree the power of representation; his inventive faculty was considerable, but the other is his distinguishing excellence. He saw, and makes us see, what he describes; he is circumstantial without prolixity, and, in the variety and frequent change of his incidents, never loses sight of the unity of his allegorical fable' (*Lit. History*, iv. 331).

it, '*Summa Theologiae Evangelicae.*' And, in spite of the many changes of standpoint and vocabulary since Bunyan's day, he will still be for many generations to come the teacher and the friend of those who have no other explanation of their own deliverance than this: 'He hath given me rest by his sorrow and life by his death.'

LITERATURE.—The literature of this subject is now enormous. Among the biographies, that by John Brown (London, 1885; new ed. 1902) stands alone in its completeness, and in its wealth of extracts from historical sources such as the minutes of Bunyan's church. Among smaller biographies and critical studies there may be mentioned: Macaulay, *Essays*, 'John Bunyan' (1831); J. A. Froude in the 'English Men of Letters' series (1887); 'Mark Rutherford' in the 'Literary Lives' series (1905); lives by Southey (1831) and Canon Venables (1888); lectures by Dean Howson in 'Companions for the Devout Life' (1877), and by W. Robertson Nicoll in the 'Evangelical Succession' series (1884). There is also a large literature of exposition, devoted mainly to *The Pilgrim's Progress*. In addition to the older books, such as Cheever (1844), there are Kerr Bain's two volumes on *The People of the Pilgrimage* (1887)—unique in their thoroughness and in the almost too great weight of learning they bring to their task. The lecture-sermons of A. Whyte (two volumes on *The Pilgrim* [1893, 1894], one on *The Holy War* [1895], one on *Grace Abounding* [1903]), are also the product of deep knowledge, sympathy, and enthusiasm, and have done much to create a new public for Bunyan. A series of papers on *The Pilgrim* has recently been contributed by J. Kelman to *The Expository Times* (xvi. [1905] ff.). Among earlier fugitive pieces, Sir Walter Scott's review of Southey's *Life* in the *Quarterly Review*, Oct. 1830, is interesting, especially for its comparison and contrast between Bunyan and Spenser. The best vindication of Bunyan's originality is that alluded to above, in 10 pp. of the introduction to Furnivall's *de Guileville*. Bunyan's *Complete Works* have been edited by G. Offor and R. Philip, 3 vols., London, 1853 (new ed. 1862); and there are critical texts with notes and glossaries issued by the Clarendon Press, Oxford, and (the text alone) by the Cambridge University Press.
